1. Broadcasting on 1775 khz??

Newsgroup: rec.radio.shortwave
Date: 2006-09-01 00:05:56 UTC
From: eamoniski@yahoo.com
Message-ID: <1157069156.399587.275660@p79g2000cwp.googlegroups.com>
Source record: 90227

Hello everyone, today around 23:45 UTC I've been picking up two faint broadcasting signals on top of each other around 1775 khz (actually I hear it from about 1773 khz to about 1778 khz). The broadcasts are in Spanish, and include music and sound like normal MW broadcasting. The signals come in and out and are drowned in QRN. For what it's worth I'm in South Carolina. Any idea what these signals could be? Does Mexico broadcast in this region of the band?

73,
Eamon

6. European Terror threat levels.

Newsgroup: rec.radio.shortwave
Date: 2006-09-01 00:06:38 UTC
From: Slow Code <my.mail@no.spam>
Message-ID: <iQKJg.4161$bM.271@newsread4.news.pas.earthlink.net>
Source record: 90232

The British are feeling the pinch in relation to recent bombings and bomb threats and have raised their security level from "Miffed" to "Peeved'. Soon though, security levels may be raised yet again to "Irritated" or even "A Bit Cross". Londoners have not been "A Bit Cross" since the blitz in 1940 when tea supplies all but ran out.

Terrorists have been re-categorised from "Tiresome" to a "Bloody Nuisance". The last time the British issued a "Bloody Nuisance" warning level was during the Great Fire of 1666.

Also, the French government announced yesterday that it has raised its terror alert level from "Run" to "Hide". The only two higher levels in France are "Surrender" and "Collaborate". The rise was precipitated by a recent fire that destroyed France's white flag factory, effectively paralyzing the country's military capability.

It's not only the English and French who are on a heightened level of alert. Italy has increased the alert level from "shout loudly and excitedly" to "elaborate military posturing". Two more levels remain "ineffective combat operations" and "change sides".

The Germans also increased their alert state from "disdainful arrogance" to "dress in uniform and sing marching songs". They have two higher levels: "invade a neighbour" and "lose".

The canadians are looking for where their Navy went, someone stole the canoe again.

I actuallly managed to buy a CRF-1 last week. Compared to all my other
receivers, I really love its size, great sound and amazing battery
life. It's really is the perfect size and performance is on par with
the 2010, great sensitivity, rock stable, etc... worth the wait.

www.devilfinder.com Build your own Regenerative Receiver Radio

It might not be an Allied Radio Knight Kit,but you can still build a Regenerative Receiver Radio.I just happen to have an Allied Radio catalog book here which dates back to 1941.(the catalog book is in good condition,not dog eared or torn up,all of the pages are there too,not for sale) It is sitting on top of my 22 inch screen CRT computer monitor (computer monitor is sitting on top of my coffee table and does not obstruct my view of my webtv tv set) right now.

A family that used to live on the other side of me,next door.A tall skinny dude owns/owned a Ford car,I dont know what year the car is,somewhere in the 1990's,I think.They (democrats) moved out of that house (Thank GOD) about two months ago.He would fiddle around with that car,but never could get it running halfway right.About seven months ago,he got it running barely enough to move it over to the driveway of the vacant house across the street from me.

About a month ago,a guy driving a green city of Jackson pickup truck pulled up in front of that car and he looked it over and I think he wrote down the VIN number of that car and then he drove off.Since then,a guy (he is one of those democrats too who thinks the World owes him a living) who lives across the street from me and next door to that house,he popped the trunk lid of that car open and somehow pried open the drivers side door of that car.He stold the right front wheel of that car.

About an hour ago,I saw another city of Jackson pickup truck over there,a white city of Jackson pickup truck.I guess the guy who was driving that other city of Jackson pickup truck got permission to get that car for himself.He worked on that car for a while and then he drove off.If he has permission from whichever City of Jackson department to get that car,he better shake a leg and get it before those democrats strip that car down.

No slinkeys no tape measure.

I built a loop antenna today out of a 9" cardboard tube like a sonotube. 24 turns of 16gauge wire and rang it with a 20-450pf variable I had kicking around. Awsum signals. I'm going to continue experimenting and put together a larger like 3 foot diameter loop and maybe build in a preamp and a band switch. It's got to be done by the end of the month for cross-country AM DXpedition. That and my Kaito loop and a spool of wire should keep me with some good signals.

RHF wrote:
> N9NEO - 9" Diameter ? -or- 9" Circumference ? ~ RHF

Was hoping you would show up. That 9" was the diameter. I stuck my portable inside and worked real well and tuning wasn't so critical. If you've got any pointers on the next design then I'm all ears - maybe a slightly larger diameter. I'm thinking just getting out of he city will be a big plus. I'm going totally primitive with the campsites - no electricity, so hope it should be very quiet.

My Degen radio doesn't use the built in preamps when an external antenna is plugged in. Not having any experience with larger loops I really have no idea what I'm going to need to interface with the radio. I would like to do 75m with the loop, and would prefer a hard wire on broadcast band so I don't have to stick my radio in the toob. I should be able to modify the Degen no prob if need to. I think I should be able to get by with a simple mpf102 jfet amp. I think the input Z of a 3904 transistor is too low to do me any good. I don't think I need to pay attention to balance on the loop if I just link couple a turn close to the main loop and feed into a single end amp. But I am out of my element when it comes to this kind of electronics.

My twisted terminated folded dipole you helped with is doing a nice job up in the attic. Maybe a long wire will go up across the river in the way back this fall.

The debt never really goes away but often gets recycled as zombie debt
often to the detriment of innocent people who get harassed and
intimidated into paying debt that they don't owe.

Of course, these are the same people who are 10 and
> 20 thousand in the hole on credit cards buying overpriced crap they

> couldn't afford in the first place.

The sad part is that this crap depreciates right from day 1 effectively writing off the initial money involved. Built-in obsolescence is excellent bait for those compelled to keep up with the "latest and best" thereby guaranteeing a continued debt cycle.

>
> Interesting how a fucking moron like that criticizes my comments about
> the lack of saving and investment and somehow associates it with
> communism.

His sense of reality is warped beyond belief not to mention his (lack of) sense of economics. But then again he has made it apparent that he is against responsible government; he does worship Bushevik, after all. If the government can go into debt to the tune of hundreds of billions he takes it as normal the average citizen should be able to spend "*their* money" in any irresponsible fashion. Then when you call him on it he has to bring up "communism".

He's just further proof of how shitty the public school
> system really is in this country. Of course, they don't teach much in
> the way of critical thinking skills but rather what some of bullshit
> they can cram down the throats of impressionable youngsters.
>

Were you a shortwave listener back in 1974? If you were a regular
listener to RCI's popular SWL Digest program, which went off the air in
March of 1991 in the wake of a devastating budget cut at RCI, then you
may remember the SW station Idents & Interval Signals Series that was
featured on this award winning program.

That series featured 160
identification and interval signals from SW stations around the world.

Many of the ident signals heard in that long running series are no
longer on the air.

If you feel nostalgic about the "good old days" of SWLing you'll be
interested to know that this unique series is now available in a two CD
set. The CDs are fully indexable and come with a hard copy listing all
of these 160 ident signals.

The cost of this 2 CD set includes first class or airmail postage
to anywhere in the world. Here's how to order your set:

cut here--

Please send me ____ sets of the SWL Digest Idents & Interval Signals CDs.

PRICES: To addresses in Canada - $10
To addresses in the USA - $12 U.S.
To all other countries - $ 15 in U.S. or Canadian
funds

Personal cheques or money orders are accepted from Canada & the USA;
Money Orders only for orders from all other countries.
Please find enclosed my cheque/money order for a total of $ ______

SEND YOUR ORDER TO: Ian McFarland, 6667 Beaumont Avenue,
Duncan, BC V9L 5X8, Canada.

PLEASE NOTE: The net proceeds from the sale of these CDs are being
donated to the local Food Bank in Duncan, British Columbia.

[Last modified 12-Feb-03]

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines
| usually don't. Phone lines carrying DSL service may be unsuitable because
| DSL operates over a wide spectrum. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to
| use it for DX work. Nevertheless, I found that it outperformed the
| telescopic whip antennas built into many portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including
| ringing, so that they will not harm the receiver. The capacitor should
| be rated 250 volts or higher.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be
| purchased from shortwave dealers (see below for recommendations).

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

These filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

```
| RECOMMENDED FILTERS
|
| If you don't want to make your own filters, the following have good
| performance, are well-built and affordable:
|
| Model 400 BCB interference filter (3.5 MHz highpass)
| http://www.iceradioproducts.com/filtersrf.html#bcb
|
```

| Model 420 HF lowpass filter (30 MHz lowpass)
| http://www.iceradioproducts.com/filtersrf.html#3
| (scroll down a bit to see the model 420)
|
| If you have a random-wire antenna, the following unit will provide
| impedance matching and lightning protection (connect antenna to 450-ohm
| terminal):
|
| Model 182A beverage matching unit
| http://www.iceradioproducts.com/reconly.html#Beverage Matching

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)
Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.

```
--------||---+----||-----+----||-----------
} }
{ {
} }
-------------+-----------+-----------------
```

The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB

1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

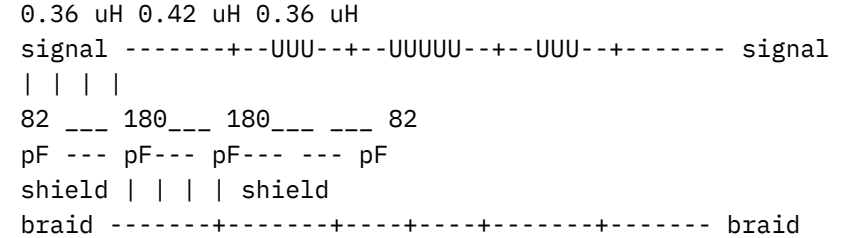
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



|
chassis ground

I had to do a little more improvising at this point. I used .33 uH
instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there
are 4 lugs plus a grounded lug. All "ground" connections go to the lug
that is mounted to the chassis, and the other 4 lugs are used for each
of the connections on the signal line. One terminal strip is used per
filter. Since both filters were necessary to clean up the hash, I am
going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means
you can't possibly hook them up backwards. (In the above schematics,
left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

Parts for the filters can be obtained from the following source:
http://www.digi-key.com/

I've got the final show on a cassette here as recorded off the air on 24 March 1991.

As I recall, Ian had expected the show to air for two more weekends, but that was it, the plug was
pulled.

Yeah it's a nice collection, but a starting bid of $2300? BIN of $2500????

Is this stuff really *that* valuable? I have no idea, that's why I'm
asking.

Just wrap your phone line around your radio and see if that helps.Do not otherwise mess around with your phone line such as hooking up unaproved thingys.The phone company might not like that.

Bingo on both counts. The NB does a decent job on the lightning, but
on the R75, it is not quite as broad in its powers as it could be. Not
bad, but not perfect. Luckily, or maybe unfortunately, lightning isn't
usually the worst noise I have to deal with at this QTH.

I think he would do better selling the collection by the piece. Most
collectors would be looking for specific radios. At an average price
of $300.00 per radio that would mean the buyer would have to move a
bunch of iron at premium prices for this deal to make much sense.

OK, "noise cancelling bridge", according the page off the web that
I built mine from. (Something like Doug's Noise Cancelling..., and
the "ARRL RFI handbook").

A "bridge" is a old general name for a circuit that works by subtracting
one signal from another by means of two "arms", (ie. matching networks).
The output could be a meter, or in my case, a transformer winding that
feeds the antenna input.

Hi Terry,

Yes, I would like to copy your setup. I like the idea of elliptical filter and the precision detector driving a nice amplifier. I'll try to get it all on a small express pcb board. I looked at the Dallas Lankford filter and wasn't sure a headphone jack would drive the filter because the filter was terminated in 8 ohms. If I scale the caps and inductors for say a 100 ohm termination then the inductance values go up by the same factor. I suppose the currents go down by the same factor, so it should actually all wash out out in the physical size of the parts. Anyway, for now the present project is a loop for broadcast and 75m. I'm leaving at the end of the month for a MW /75m DXpedition over to the left coast, and need to prepare antennas for that trip.

Tell Will thanks for mentioning me and my address is yzordderrex@verizon.net

I look forward to the project.

regards,
NEO

I've got the ANC-4 unit now and will be experimenting with it over the weekend. I'll use a variety of wire antennas of different lengths and configurations. My first impression is positive. I've attached it to short wires and sure enough, the noise floor goes way down. Interestingly enough, though, I find that it will not work at all in conjunction with the H-800 active whip. I'll try it again at some point, but the whip is nowhere near as effective as a wire, at least in my preliminary tests

Violent Crime Wave Threatens d.c. Tourism. www.drudgereport.com
(suits the s..t out of me! You have to be crazy to live around there)

At least Mississippi isn't number one in crime.Mississippi still the fattest (why am I such a fatso? I have always been a fatso (ever since I was a cute little kid flirtin with the girls) it's a thyroid gland thingy,I dont burn calories like I ought to) and poorest state.How do they come up with them ''polls'? Not much over three million people in Mississippi,the city you live in probally has more people that that,but they are all skinny people? Oh yeah,they didn't factor in cost of living.

Source record: 90267

and some other ramblings of a madman.

I built a 'prototype' 10" loop last night but this is old news.
Worked better than I ever could have hoped it would. I'm working on a
2.5ft loop for the roadtrip. I'm thinking I might be able to tune the
loop to 75m with a tap and work some of my AM buddies too. I decided I
would take my pair of Degen DE1103/Kaito KA1103. The thought crossed
my mind to bring the R75 but I don't think it's field rated -especially
when it travels with me. I went over to Dick's sporting good store but
the $39.95 Coleman dome tent was out of stock. I may just buy my
daughter's off of her. Once I get to LA all the extra gear is going
straight to the Salvation army. I picked up a compass to align my
antenna for a few bucks and a steel nerf type scrubber for cleaning out
the pots and mess kit. Tomorrow I'll head over to the salvation army
and get a crappy pan or two and a fry pan.

I'm making this trip solo. I would love to take my dog but he has to
stay home and guard the 5 wimmen. Four lovely daughters and an awsum
wife. Besides, I don't want to lose him on the road. My 21yo daughter
works for a vet and she has a very nice stray pitt bull looking for a
home. The pitt bull rescue shelter doesn't want her cause the lady
said she already had seven female pitt bulls and she can't take
another. I figure it's doggy death row for this one, so I might just
take her on a nice trip with me. If I become attached to the bitch
then I'll just have to pull the plastic out at LAX and buy her a plane
ticket back to Boston with me. I think dogs ok to fly in baggage if WX
not too cold. I think Wife will probably be in LA when I show up. Her
brother just became a grandfather so she will want to visit and I am
going to twist 4 daughters arms to buy wife a round trip ticket for her
birthday.

Schedule is firm in that I have first two weeks of October off from
work. Exact route is up in the air. I was first going to go across
rt90 and maybe stop to see a friend in Wisconsin. Then I decided to
take a more southerly route across the bottom of Pa then hook over to
Indy and on to St Louis. I want to see the arch. Then I thought to
head south on 81 thru pa into Maryland and Virgina and then North
Carolina. Then thru Tennesee. I just can't decide today. I hope to
have that figured out in a week or so.

Drifter,

What are we congratulating DxAce for exactly?

I don't like congratulating someone unless I know exactly what it's
for. See once you congratulate someone you can't take it back so easy.
I've heard that there's a certain stigma attached to this premature
congratulation.

Anyway sounds like Mr DxAce might have wrote something so I will take a
chance and offer my early congratulations and pat you on the back as
well. Please take a bow and let us know what exactly you have done.

Best regards,
Bob

dxAce then wrote:

> All well and good, but it is THEIR money. Not MY money, not YOUR money, but
> THEIR money. [implying that the -only- one to be hurt would be the home seller]

John S. wrote:

> Yes, if the country isn't really going to collapse then what will the
> problems be and what impact will they have.

Well, just for a start, here are two answers to your question of "what will the problems be"...

On September 1, 2006, the Wall Street Journal wrote:

(Page A1, column 2)

"But retailers reported mixed sales for August, stoking concern that a -slow housing market- may damp the fall and holiday shopping seasons".

and (Page C1, column 5 headline)

"Housing Chill Begins to Pinch Nation's Banks"

Let's see now...the housing bubble is causing the WSJ to express concern, the retailers are worried and the banking industry is beginning to get pinched.

Maybe it's time for you guys to drop them a note saying not to worry...

As John S. has been in the banking industry for 30 years, I will let him figure out "what impact it will have".

.....
.....

The trip sounds terriffic and it is always the unexpected that makes the highlights. I have criss-crossed the USA many times, starting with a tent trailer, then getting a camper van, and ending up with a smallish Winnebago. I always had a dog along; in fact, I wouldn't camp without one. Three times over the years, he drove off thugs or thieves, and his woofy presence was enough to make bad guys go elsewhwere. The only thing is, if you keep close company with that pit bull for two weeks, believe me, you won't get rid of her. You will learn some dog language, rely on her eyes and ears, and realize that she only wants to please you, while guarding and watching. I have always had shepherd/huskies and they are marvellous travelling companions. I haven't travelled for ten years, and things will have changed, but certain precautions should be observed. You don't want to be targeted by some thugs who look for solitary campers. Ten years ago, the National Park Service warned that camping in the Parks was not safe due to increases in crime and reductions in staff. It is safer to camp in the car by taking out the back seat at night rather that sleeping alone in a tent. Days are getting shorter, nights are getting cooler, and there is the chance of rain. There is always the strain of finding a good spot for the night. You pretty well have to line one up by 7pm or you can't really see well enough. For maximum safety, I would go to KOA or somesuch. If solitary camping is preferred, once you get to Ohio, or the midwest, you will find that most small towns have a town campground which is usually free. These campgrounds are left over from the Chatauqua days and are relatively safe. There is a book on "free camping" which gives locations across the US. If you are interested, I will look it up and send you the title if you wish. It was quite

inexpensive. It is hard to get this information because the "travel industry" is focused on big bucks. The AAA has some useful camping books also. I always used to get breakfast and maybe buy something in the town and it was always interesting to chew the fat with the locals. If you are stuck, look for a suitable Catholic church. The Catholics have a tradition of helping travellers, and they often have a driveway that is out of the way. Avoid camping near big cities, Too much crime. Surprisingly, the best campsites were always the free ones. Have a good and safe trip.....73.....

113. Re: Question about the Timewave ANC-4

Newsgroup: rec.radio.shortwave
Date: 2006-09-02 10:47:49 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <44F9614B.6F2B@mindspring.com>
Source record: 90288

There's no trouble with active antennas, in fact they're handier because you can get exactly the location you want when you construct your phased array of two.

What's most likely is that you're nowhere near the right gain to make the signal you want to cancel the same strength in both antennas, and so you get no indication of a null direction.

The ANC-4 has linear gain pots, which unfortunately means that the phase control also changes the gain (strong at the ends, weak in the middle), which makes searches for the null harder than it has to be.

A technique called successive overrelaxation is the most successful in searching for a null.

Say, step the phase, and at each step minimize the S-meter with the gain, but going a little past the minimum each time (choose a direction for this and stick to it).

Go back to the best phase, and repeat with smaller steps. Hairline changes will be necessary at the end.

And finally notice that there's a phase button, and searching with the opposite phase might surprise you. Having the wrong hi-lo frequency setting also changes things, giving you less than a complete phase control.

Successive overrelaxation works when the search controls aren't orthogonal, which is what most of the time happens.

Not a heck of a lot of time for a cross-country road trip.
The drive from TN straight to LA is three+ 8-9 hour driving days.
Assuming clear skies (got chains?) and no break downs.

Nevertheless - Good luck!

Interesting link...thanks cuhulin.... I have read an account of a
witness at the surrender of Cornwallis at Yorktown that Cornwallis said
something to the effect that the loss of America was only temporary and
"we will get it all back in 100 years." I have come to the conclusion
that the royalty of Europe and the money powers behind them hate the
USA and have waged a systematic campaign, using their money power to
"get it all back." Aided and abetted by greedy politicians, they have
largely suceeded. Some items: The British waited to ratify the
settlement of the 1812 War until they heard the results of the Battle
of New Orleans. If they had won, they planned to scap the settlement
and drive up through the cetral US. Look up Jackson's battles with the
Bank of the US in the 1840's. The British intervened in the Civil War,
helping the south in their "divide and rule" policy. The Federal
reserve Bank (established in 1913) is mostly European-cotrolled. It
was brought into being in secret on Christmas Eve when the European
banks refused to roll over the US debt and forced the US into
bankruptcy. The direct election of Senators made them subservient to
corporate money and reduced their local effect, It is the inflation of
the currency produced by the Federal Reserve that has put the US in
such a desperate situation with massive budget deficits, impossible
trade imbalances, and a hollowed-out industrial base that cannot

generate wealth. It is a tragedy because the concept of inalienable rights of the individual and governing with the consent of the governed are abhorrent to the feudal-minded European aristocracy. Even the US Supreme Court has stated that it bows to the authority of the European Supreme Court. Little by little , Americans have lost their Republic, and it is a tragedy for the whole world.

I never did that. I did use the tracking generator and spectrum analyzer
to sweep the EMI filter sections that were a part of the supply to see
how well they worked attenuating EMI. I made improvements in the filters
based on that information.

That PDF is a very good primer on EMI / RFI problems and at the time I
was doing that work I had to figure out the strategies outlined in that
document myself with the exception of using using the probes /
directional coupler as a type of grid dip meter. This would be an
excellent proactive technique that I could have used when I was doing
that kind of work years ago.

What he recommends for a sniffer loop an inch in diameter in figure 2 is
over kill in my opinion but would be very well worth the effort if you
were to make a loop larger than a few inches in diameter for hunting a
more distant source than poking around the insides of a box of
electronics. I don't think a BALUN would make much of a difference in
what a 1 inch diameter loop with a split shield would pick up inside a
box.

You can tell that this document was written years ago because it states
Scott Roleson works for HP, which is now Agilent.

Very interesting pdf document, thanks for pointing it out.

Appears we have a new TV star!

Saw a TV ad last night for Corona with the usual "beach" theme that had a GE Superadio 1 sitting on a table by a Corona bottle. Don't see any other posts about it, so it must be fairly new. The radio just about fills the screen shot, so you can't miss it.

Keep an eye out for it...

No, linear pots are linear in voltage, and you want linear in power, which they are not.

The result is that the gain is small with the phase centered, and big with the phase at either end.

>
> Are you suggesting some 'play' in the null seek process?

No, it's simple geometry.

Draw a long narrow ridge running SW to NE on a piece of paper. A line will do.

Now imagine that the middle of your line segment is the actual null sought.

Suppose gain moves you N-S, and phase moves you E-W.

Start S of the SW end of your line. Move N to the best null, then E to the best null, then N to the best null, the E to the best null, etc.

You observe you follow a zigzag path making no progress up the ridge to the true null to speak of.

Now do the same thing going _past_ the best null. Your progress is swift towards the true null.

Successive overrelaxation goes a fixed fraction past the best null each time.

It is unnecessary where the ridge is instead a nice circle, for two steps take you to the true null. But a long narrow ridge is very common, and SOR is the way to find the null then.

the problem with this is that if it were true, the fed would raise interest rates to ensure corporations retained their profits, while forcing mass layoffs to the middle class.

seeingeyedog doesn't read the CONSERVATIVE press since ultra right winger john derbyshire recently quoted another ultra rightist, randall parker, who also found that middle class incomes haven't gone up in 30 years when adjusted for inflation.

174. Small radio for backpack; reception in train?

Newsgroup: rec.radio.shortwave
Date: 2006-09-03 08:15:48 UTC
From: Daniel <engeler@gmail.com>
Message-ID: <1157271348.476058.72750@e3g2000cwe.googlegroups.com>
Source record: 90349

I recently discovered the joy of shortwave listening with my new Sangean ATS909.

Now I want to listen to shortwave while commuting on the train. My ATS909 is too big for that, is there a small and good radio to carry in a backpack? I can't use a telescopic antenna in a backpack, but is there a chance of receiving the major broadcasters (e.g. Deutsche Welle and BBC in Europe), despite the small antenna, metallic train and electromagnetic disturbances from the train?

If necessary I could run a bit of wire inside the rucksack :-)

Congratulations coming from the Head Hypocrite?

Why, thank you very much! Quite an honor!

P.S.

If you were paying just a little more attention, you would realize this thread was -started- by mike maghakian *AND* it had 45 responses in addition to mine. (But thanks for singling me out. It's nice to know when the truth hits a raw nerve).

P.P.S.

Thirty seven posts on farting (titled "Ethical question"), and we didn't see you rail against that. I guess you feel farting is more important than the state of our economy. Keep up the good hypocrisy!

Your pal,
Dick Chisel

You need to go back and read (possibly for the first time) the history
of retailing and real estate for the past 40 years. You will find
upturns and wownturns. But none of them resulted in the all out bust
that you indicated would happen. You have the unfortunate habit of
writing in sensationalistic extremes...black and white, bust and boom,
etc.. The economic reality is that most activity is much milder than
that. Even the so-called dot-com bubble really did little more than
wipe out a lot of overvalued options and stocks with no underlying
fundamental value and force a lot of dot commers into realistic sources
of employment. Think of businesses with no plan and no source of
income other than venture capital funding like FooFoo.com and you will
see the reality of what happened in the dot com bubble..

I tried that but the elecrical noise was way too high for shortwave. FM
was ok though. I think the first thing to do is to take your present
radio and see how high the noise is on the train before you go and buy
another radio.

Source record: 90376

Hi there,

I really don't know much about shortwave / DX, but I have bought the Siemens RK 661 (Sangean 808) some weeks ago. Now I have time to use it an get used to it.
So it works best with an external antenna. I have a compact antenna from Grundig (came with a YB400), but this don't work very good. Now i tested a lot and found out that it works pretty good with a normal stereo jack extension cable (4 meters), that I put on some good positions in my room.
Is this a known "antenna trick"? I mean, I don't know anything about shortwave antennas, so I would like to know if - with this kind of nearly NO effort - there is another way to improve this solution I found a little? or ist this already all I can do, if I don't want (and can't) build a "real" antenna.

thank you!
littbarski

By this time I've used the ANC-4 enough to know that it's a big help. Where noise is concerned, it makes much more of a difference for me than running off batteries, ferrite cores, etc. I'm kicking myself for not getting one of these sooner. I find that my noise floor usually drops one or two S-units the instant I turn the ANC-4 on. Adjusting the controls then can make a huge difference; and at my location it almost always makes more of a difference than is necessary to compensate for the 6 dB insertion loss. It especially shines during the day on LSB and USB.

I've tried it with a lot of different antennas, but I'll be experimenting with antennas for quite some time, I suspect. I did eventually get good results using the H-800 active whip. However, where noise reduction is concerned, I find that I get the best results using a wire antenna that snakes its way between my house and the neighbor's house and then back near some power lines. The nulls with the wire antenna are just as deep as they are with the H-800, but they're a lot easier to find. These conclusions are pretty tentative, though, as I am still experimenting and trying out different arrangements.

On the whole, I think the ANC-4 is great and worth every penny if you have problems with noise. It works as advertised.

Steve

The short answer is that anything that works for you is OK. With a portable radio such as that, really big antennas are generally counterproductive because the radio amplifies whatever comes in on an antenna so much that if you add too much wire, you end up overloading the radio which causes distorted sound and signals coming in where they don't actually exist as well as a problem of very strong signals overwhelming weak ones you might want to hear. If you have any way of grounding the radio, that will help reception. Listening at night on the lower bands (9 mhz and below) should yeild lots of good listening, and in the daytime, the upper bands might be more productive. Good listening :)

All life all holiness come from you O Lord
Brio

Steve = tks 4 that, a very informative and interesting post.

I want to ask the group this:
I had a MFJ-1026 noise canceller when I lived in suburban Joburg.
I tried every sort of antenna combination - verticals, horizontals, whips
and Windom's, but the thing never abated the noise to any appreciable
extent, so I gave up on it after a year of fiddling and experimenting.

Now I have passed it on to a friend who lives in a very noisy suburb of Cape
Town. He did no better than me with it and also gave up on it. Now he has a
Wellbrook ALA1530 which gives him decent results.

So my question is this:
Is the Timewave ANC-4 markedly superior to the MFJ1026?

Hi Litt
Keep experimenting with your antenna:
Here are three rules to help you:
1.) if you can get it out your most favourable window get it up high and away from the building
2.) experiment with positioning it away from household noise sources
3.) any sort of wire is good, even very thin near invisible wire - there are purists who might dispute this statement, but I give you 40 years worth of experimenting and antenna farming.

Portables generally don't like too much wire connected to them or they start overloading and giving spurious images, plus you can also BLOW the front end and end up with costly repairs. I wouldn't connect more than 10m/30ft of wire to a portable.

If you want to build a "real" antenna you better get a serious tabletop like an Icom R75.
Portables are designed to work well on their whip antenna's and have to be small inexpensive and light weight, so trying to get them to emulate a larger more expensive tabletop radio is only going to give you the problems mentioned above.

wiThanks ve3... Lots of good information. The pitt Bull is off getting her temperament tested before the vet will release her to me. Wouldn't that be irony if I got eaten up by the dog that was supposed to protect me. Heheh. Perhaps a sign on my site that reads "Beware of Pitt Bull" In english and Spanish as well. I think cost should be secondary to safety here, so that will be my creed. One day maybe the W1FE will join me on a cross country tour if I prove it to be safe.

Thanks again, more later..

Regards,
Bob

hi Brio,

thanks a lot for your answer, that helped me. One additional answer:
how can I ground this type of receiver? there is no exit than
haedphones and antenna. do I have to make external antenna and ground
together, or do I have to open the product?

greets

216. Antenna blues, so far my Sony AN-1 wins!

Newsgroup: rec.radio.shortwave
Date: 2006-09-03 19:12:09 UTC
From: Jeroen <jeroen@peatfreak.com>
Message-ID: <1157310729.194384.53690@i3g2000cwc.googlegroups.com>
Source record: 90390

Hello All,

Picking up my SWL hobby wich I left in ~ 1992.

I have a Phillips D2999PLL and Sony AN-1 which I have kept from back then. My living situation is far worse (for SWL that is) compared to back then when living ina quiet suburb. Living in the city centre now with a supermarket with huge fans on their roof for cooling the freezers and such, and ofcourse all the equipment from our neighbours.

So I've been reading the forums, sites and newsgroups on my equipment and found that generally the receiver is well received (*g*), and the antenna is not! Back then though I've been able to receive quite a bunch of QSL cards from stations I picked up in the tropical bands. Had lots and lotsof night of fun!

But, to improve my antenna situation I've been looking around to see for alternatives. Active antenna's are out of the question for me. Frick, the quality ones seem to start at 200Euro. As a soon to be daddy and other expenses coming up I can't afford those...

I've little room for a reasonable 'random wire' either. After some looking around I decided to give the EMF antenna a try from RF-Systems in the Netherlands (where I come from as well, accidentally).
After a few days of trying different configurations (indoors, out on the balcony, horizontal, vertical, north-south, west-east and all inbetween, 30 degree sloped, earthing to the earthwire in the powerbox of the appartment, etc) and comparing it to my Sony AN-1, I can savely say, at best the EMF antenna produces equally to the Sony An-1, but has never exceeded it. It seems to pickup far more noise and interference then the AN-1 does.

So the EMF is up for grabs for anyone here who makes a good offer for it!

I also have to add, I did quite some browsing and reading on the EMF before I ordered it, and the general tendency was it is an OK antenna.

I guess, in my situation the AN-1 isnt such a bad antenna after all, or the EMF is for my situation a really bad antenna!

This week I am going to try and build a magnetic loop. At first I saw many daunting schematics which are too technical for me with my left hands, but I found this page (http://www.kr1st.com/swlloop.htm) with a *very* simple version that according to the writer is so simple as it is for receiving only. Apparently, the transmitting ones need to be far more technical. Does anyone has any tips regarding building any of

these? My particular interest is the 60meter band.

And, anyone any comments on my EMF/AN-1 comparison? I think I pretty much tried all configurations, and in reality there isnt much to do with the EMF, its all prebuild. But I'm open for suggestions!

.....
Good idea. My dog was talking to another dog the other day and he
said, "My master is ok,,,he's kind, takes me out for walks, pets me,
and if it comes to that, he's a good source of protein." There are
two basic types of dogs: a jackal who is food-oriented and a wolf who
bonds with an alpha male. I think the pit bull is a jackal-based dog
and responds well to food. One trick used by the gypsies in Europe,
when they want to steal a dog, is to put some meat under their armpit
for a moment and then feed it to the dog. This is supposed to create a
powerful scent association with the person, and the dog will willingly
follow him. You might try that trick for quick bonding, and it won't do
any harm. Unless the dog has been trained to be vicious, she will be
affectionate and a big baby and very loyal. The one trait about pit
bulls is that once they get in a dog fight, they will not quit. Dog
culture calls for standard behaviours in a fight. When a dog
surrenders, he rolls over on his back with his legs in the air exposing
his underbelly. At this point, the winning dog accepts the surrender
and backs off. But not the pit bull. He keeps on fighting, confusing
the hell out of the other dog. You will have to provide proper food for
the dog: you can't get by with just kibble. Raw stewing beef or lean
ground beef works well with the Shepherds: ask the vet. You don't have
much time to train her: she will respond to praise, and some sort of
doggy treat as a reward/reinforcement. Never hit the dog and only scold
for something serious. Positive reinforcement will get the job done.
You will have to get a sturdy leash just in case someone irritates her.
Good luck with her.

221. FREEWARE - WinCAP Wizard - VOACAP

Newsgroup: rec.radio.shortwave
Date: 2006-09-03 20:22:59 UTC
From: J Tabor <denews@taborsoft.com>
Message-ID: <12fmed6tnhqsm32@corp.supernews.com>
Source record: 90396

Greetings,

Our last invitation post was 14 Feb 2006. This one is similar but includes new information and an extra-special offer.

What is WinCAP Wizard? WinCAP Wizard is the most powerful HF Communications Analysis Prediction package ever developed.

Please understand I'm typically a humble type fellow. Unfortunately, if this message isn't compelling, you will likely ignore the tool and miss the offer. Good products do indeed sell themselves. But obviously, folks must first try the product. In a vast sea of amateur radio related products and tools, here is a tool you will probably like and, find very useful. Sure, you have product X, have used it for years and know it well, plus you are busy and don't have time to learn a new tool. But, does this logic keep you from acquiring new hardware, like radios, antennas and computers? Of course not.

You want free software; all of our software now defaults to freeware and provides basic functionality, sufficient for many users. The default WinCAP Wizard v4 download is known as QSL-ware. QSL-ware basically means freeware. <G>. We do appreciate an email acknowledgement and comments - thus our term QSL-ware.

This QSL-ware version provides unlimited point-to point and NCDXF beacon predictions. The extensive "Location Browser" provides a prefix search along with other useful information. The unique "Beacon SmartChart" and the Smart-Map-Geographic View are in this basic feature set. There are 2 point-to point charts and 3 beacon charts, each with numerous options, 4 point-to point reports and 4 beacon reports - all free.

The registered version adds a lot of tools and functionality. The "Coverage-Analysis View", is an elaborate map with the ability to plot any of 7 parameters, for up to 9 frequencies and all 24 hours. View any hour and frequency for each predicted parameter with a mouse click. More? A DX-list plot and search are provided. The Coverage-Analysis View provides several additional unique features.

Also included in the registered version is the "User Batch" prediction type. With the ability to analyze up to 18 unique circuits and present the results with 5 charts and 3 reports our user batch mode is both powerful and flexible.

Special user-batch prediction "views" provide definite advantages for the contest-oriented op. The Contest-Plan SmartChart and Contest-Plan SmartReport deliver incredible insight into "when to be where" during the contest. These could also be useful to the savvy DXer.

Sorry - I can't list all the advantages here - this is already too long. But if all this isn't enough, the registered WinCAP Wizard package includes GeoAlert-Extreme Wizard and Beacon Time Wizard, as a free bonus.

A 60-day full trial key is available upon request. Try the software tools. If you don't think them worthy of being paid for, they revert back to the default QSL-ware/freeware mode and functionality, without time limit.

Is there any question WinCAP Wizard is the leader in the HF propagation prediction category? If so, that thought should soon be wiped away. The next major version, v5, is due for release very soon. As we say, the best keeps getting better. <VBG>

Before a brief introduction on the main features of the new version, the special offer. Register v4 now and qualify for a free upgrade to v5.

WinCAP Wizard v5 provides a "Contest-Log Manager" and imports Cabrillo format logs from 55 different HF contests; more contests can be added easily, upon request. The logs can then be plotted to the "area coverage" map view - with or without predictions. The logs can, of course, be filtered and plotted by day, band, hour and any combination of these.

To my knowledge no other software exists to geocode calls for stations worldwide. There may be software that plots US, and even Canadian, calls. Do you know of any? Are you interested in this functionality? Can you imagine the possibilities?

The v5 prefix search features are among the finest available. The QSL-ware version also benefits - through the Location Browser.

Both USA and Canadian call lookup is provided. The primary purpose is log station geocoding but the ability is "way cool" and proving interesting. <G> For example, using the prefix/call search on the area-coverage view, you can begin typing a call and the great-circle path is plotted; as you continue typing, the great-circle plot changes to show the prefix and - as you complete the call - the actual location is plotted.

There are other minor enhancements over v4. The new WinCAP Wizard v5 provides an extensive set of powerful tools. Hopefully users will be able to easily do complex and interesting comparisons -that previously were too labor intense and time consuming.

Still, if you use a competing tool, not to worry, they can surely add a few of our choice features. <VBG> But it's doubtful they can add them all.

In any case, you are invited to download and use WinCAP Wizard version 4 in the QSL-ware mode without time limit. You will also find several other useful amateur-radio related software products at www.taborsoft.com

Don't miss the ID Wizard freeware. It provides a rich set of useful "tools".

Thanks for reading this far. Hope to work you in a contest.

Cheers,
KU5S

Hi John,

thank you also a lot for your answer. at the moment I am receiving many good stations (as it's night here in Europe). I also took another wire (also from my stereo) which is even better (with cinch a the end, not so long, only two meters).

i will try the things you told me. grounding a portable is probably not really necessary?

.....
.....
I used an AN-1 in a concrete apartment for a year and it worked well
after I had made a change to it. Unmodified, it was quiet, didn't hurt
the signals but it didn't seem to have much gain. I added a thin
hustler 2 meter 5/8 whip to the end of the AN-1 whip (about 4 feet as I
recall) and that improved it consiserably. I think that Sony was
worried about generating spurious in high-signal areas like Europe and
used very a conservative amplifier. Adding a length to the whip in
weak-signal areas had no bad effects.

> Good listening :)

Verstaldin gave you good information.

If you are not having an issue with local noise preventing you from
hearing stations you want to hear then keep using what you have.

Chances are that the noise interfering with reception will be greater
using the AC adapter instead of batteries. If the noise is not a
problem then you will most likely notice that the signals come in
stronger with the AC adapter in use because it will create a virtual
ground with the single wire antenna you are currently using. This
single wire is really half an antenna where ground is the other half.

This single wire antenna, if you are using the external antenna jack, is most likely connected to the tip of the jack. The antenna jack barrel is probably the radio ground so what you could do is make a dipole antenna connecting an additional wire to the antenna jack barrel tab inside the jack. String the additional wire in the opposite direction of the original wire connected to the jack tip. This dipole antenna is a complete antenna that does not need a ground. Using this antenna should give you an improvement in signal level using the batteries and might also cut down on the noise using the AC adapter.

The advantage of this small active antenna is you can put it in the
quietest location of you house. Go around with a portable radio to find
a quite spot and mount the AN-1 there.

Small active loop antennas are pricey but are most likely the best in
town choice.

To get an idea how this type of antenna will work in your location you
could build a passive loop at small cost using just coax cable.

Gadahn was born Adam Pearlman, the son of musician Phil Pearlman.
Gadahn's family raised and butchered goats in accordance with
halal food requirements for sale to Muslim groceries on a farm in
Riverside County, California. Gadahn's Jewish grandfather, Carl Pearlman,
was a prominent surgeon and on the Board of Directors of the ADL (!!!!)
, but Gadahn's father converted to Christianity and changed his name
to "Gadahn", derived from the name of the Biblical figure "Gideon".
He was homeschooled until 15, when he moved in with his
grandparents in Santa Ana, California. Gadahn was fond of heavy metal music
and later briefly listened to fringe **Fundamentalist Christian (Shortwave)
radio
stations** (!!!) before converting to Islam.[citation needed] In 1995,
Gadahn
posted an essay to the USC website describing his conversion, entitled
"Becoming a Muslim".[2] According to his parents, Gadahn moved to
Pakistan in 1998, where he married an Afghan refugee and maintained
intermittent contact with his family.[3]

On July 7, 2006, Gadahn appeared unmasked on an
al-Qaeda tape made public on the internet.[8] On the
tape he denounced the United States military presence
in Iraq and killings and rapes committed by American
soldiers. Gadahn's family, who had previously denied
that it was Gadahn who appeared in the al-Qaeda
videos, did not immediately respond to the new tape. [9]

On 2 September 2006 a video surfaced on various pro-al
Qaeda websites featuring Adam Gadahn for approximately
44 minutes of the 48 minute video called "Invitation to Islam"
which also featured Ayman al-Zawahiri. In the video,
Gadahn praises George Galloway and Robert Fisk for
expressing their "respect and admiration for Islam" and
for "acknowledging that it is the truth" and for "demonstrating
their sympathy for Muslims their causes". Gadahn urges
American soldiers to "surrender to the truth" and "escape
from the unbelieving Army" and "join the winning side".[10]

NOTE: You can DOWNLOAD the entire 2 September 2006 video at the link below....

I have the ANC-4 (original JPS version), which was a great help with
random wire antennas. It seems to be of no use with my welbrook. I
tried to use the built-in noise antenna on the ANC-4 to make a null
with my Wellbrook and never managed to get that to work. Of course,
the Wellbrook is a very quiet antenna in the first place.

It works fine with mine, using a wellbrook ala1530 and an active whip
(or another wellbrook 1530).

I don't think the built-in noise antenna is likely to work though.
I tossed mine out.

With a wellbrook loop and a whip _located right near it_ (near means
fraction of a wavelength), you get the same pattern as with two
whips separated by a quarter wavelength, but without using any
real estate, laid out in the plane of the loop, ie. a double null
at one endfire and a max at the other endfire, opening up to a V
and sweeping to a double null at the opposite endfire and max at the
other.

Two loops separated by a quarter wavelength are handy for some things,
like nulling in advance a particular station, and then nulling another
altogether with the ANC-4, without having to go to multiple ANC-4's.

There is an odd thing with two loops, though.

For nulling a station by phasing, paradoxically, you should put the
station near the max of the loop, not the null. The phase of the
signal from the loop gets more and more unstable as you approach the
loop's null, and harder and harder to phase out with the ANC-4, is
the reason. It's comparatively easy near the loop's max.

OK. I'll try an active whip. Still, I think the built in noise antenna
should work. It was fine when I was cancelling local computer noise.

I told y'all how to get the best bad weather news for your area.If you have a small battery powered tv or combination tv/radio,that is good to have too,one that can also run off a car battery.I own five of them.The weather here is between warm and cool,very calm weather,just now about to get night time outside.What have you contributed?

John,

Was your 1026 modified for use below 2 MHz? Mine was modified several
years ago and it worked much better in the mediumwaves after the
modification.

I've owned an ANC-4 and still own a modified 1026. I've found the 1026
to be better at killing noise and nulling out stations. That being said,
I've found the Quantum Phaser to be better than the 1026.

Yes, it was MW modified and we even took it on DXpeditions and tried it for phasing and nulls with the beverage antenna's, but results were not worth all the knob twiddling, that's why we gave up on it.

don't get me wrong - it did work, that is it was not non-functional, just we did not get the good results that others report.

Hi Sanjaya,

Thanks for the interest. The correct email address is several places in the software; even a one click link. Also is available on the web site.

Using a special email address for usenet, and usenet only, cuts down significantly on the junk mail. Also is humerous when junk mailers use the unsent only address and claim I requested their junk. :) How? Evidently they have ways, like sending to lots of addresses at a domaain. Oh well. :)

73,
Jim

hello,

I am looking to start out with an inexpensive even used transiever to do some HF broadcasting. I am aware of getting trained/licenced, and all of this is near future.

Eventhough i am completely ignorant concerning the know how on setting up a station of this sort, and this too will come with study. Im looking for a broad cast range between 500 and 1000 miles i just need something cheap hopfully tht would do the trick for now. What is all involved in this whole operation. from price to antennea to what ever..

Please someone give me some direction

Thanks

Jesse

Hello All,

Thanks for your replies. Here some reactions from my side:

> I used an AN-1 in a concrete apartment for a year and it worked well
> after I had made a change to it. Unmodified, it was quiet, didn't hurt
> the signals but it didn't seem to have much gain. I added a thin
> hustler 2 meter 5/8 whip to the end of the AN-1 whip (about 4 feet as I
> recall) and that improved it consiserably. I think that Sony was
> worried about generating spurious in high-signal areas like Europe and
> used very a conservative amplifier. Adding a length to the whip in
> weak-signal areas had no bad effects.

I did this as well, I do live in Europe (Holland) and it increased the
noise heavily, making it not really usefull for me.

> Small active loop antennas are pricey but are most likely the best in
> town choice.

Unfortunally, no money for that :\

> To get an idea how this type of antenna will work in your location you
> could build a passive loop at small cost using just coax cable.

This is what I am going to do. Aftre some digging around I will go for
copper tubing however, as on one site I found that on lower frequencies
thicker copper will do better then the thinner one advised in the
article I gave the URL for.

I'm looking forward to building somehting of my own though! And I'll
probably experiment afterwards to improve the results. Can't wait to
see wether it will outperform my AN-1 antenna.... The costs are, like
you said, minimal.

I'll post back when I have done some testing on my to-be magnetic loop
:)

It wouldn't hurt my feelings to see Radio Shack continue to downsize other than the people losing their jobs. That always is a bad situation but the company has forgotten what made it a growing company. I remember years ago being able to go into a RS store and get practically any electronic part within reason and actually talk to someone with enough technical knowledge to know what it is and what it does. Like the rest of corporate America, they have eliminated the jobs of the knowledgeable so they can pay dolts a bit more than minimum wage.

You know, I've now read so many of these RS slams...and, I suppose, they are mostly accurate. However, they are true due to the nature of a failing business model. That model tried to keep part of the business catering to the electronics experimenter. (You CAN still get caps, resistors, etc. there.) Their failure comes, in part, out of this desire to appease the very people who deride them for it.

I bet I've been RS 4 times in a month, each time buying $10 or less in supplies. Who can pay the rent on such purchases?

Hasn't anyone seen the same thing happen to hardware stores?
The "good old days" of a knowledgeable hardware man spending more than 5 minutes with you to sell a 50 cent item are also mostly gone. The biggest difference is that hardware stores-of-old lost out to the "big box" hardware warehouses. If RS goes (and it probably will), there is no alternative to the electronics experimenter other than the internet.

In my area, at least, there are no components, circuit boards, solder, etc in the "big box" stores.

Maybe the rest of the stuff they sell is crap...now it's the same crap you can get at WalMart.

I, for one, will miss RS if it goes. In fact, I have a bit of a soft spot for RS because that's where I got started getting interested in ham radio. Has it changed over the years? You bet. Why not get out an old picture of yourself and look in the mirror. Have YOU changed?

You could do this as an amateur radio operator. You need to get a
license, though, before doing any 2-way communications.

If you need to "broadcast" however, play music or or preach a sermon
or whatever, that would be against the law as an amateur.

If it is 2-way communications you're interested in, go to
http://www.arrl.org and they have full details on getting licensed as
an amateur radio operator. They have all the necessary books and
license study guides.

Figure $500-$1000 lowball for getting started with used equipment.

Propagation on early Sunday (05:00 UTC 9/3) was great. The Beeb from Singapore/Thailand was booming in (to Seattle) on 17660 kHz, and Radio Aus. on their Asian track, 15415 kHz, sounded as good as their Pacific transmissions.

A day later, (9/4), you couldn't even hear a carrier for the same signals.

www.devilfinder.com Allied Radio

I have an Allied Radio Corporation catalog here which dates back to Spring Summer 1941.180 pages including the front and back covers.The catalog's front cover has slightly faded somewhat over the years,but othewise it is in good to very good condition.On the front cover of the catalog is a picture of an Eagle spreading it's wings and flying across the sky and there is a picture of a Boy Scout with headphones on his ears and he is looking up at the sky and talking on a microphone.I enjoy looking through my old 1941 Spring Summer Allied Radio Corporation catalog once in a while.

> I'll post back when I have done some testing on my to-be magnetic loop
> :)

You don't have to use copper tubing. You can build the antenna using
just the coax.

If you build a 40 foot loop you would build it like this:
1. Cut a piece of coax 40 feet long.

2. Cut the shield only at 20 feet separate the shield about an inch.
3. Bring the ends of the loop together connecting the shields and center conductor on one end.
4. Connect the shield of the lead-in coax shield to the shields of the loop and the remaining free center conductor of the loop to the center conductor of the lead-in coax.

The loop will be somewhat unbalanced but should work pretty good. You can improve the balance of the loop by using a BALUN made of enamel coated wire and a ferrite toroid core. If you use the BALUN you would have both ends of the loop center conductors connected to a bifilar winding on the core of a few turns where the other end of the winding is connected to the lead-in center conductor and common ground made of both end of the loop shields and the lead-in shield. All this should only cost under $50 dollars.

When I was in elementary school jokes like this were funny but not since
that time.

When I was in school summer vacation was not long enough.

Since I have been reading this news group summer vacation is not short
enough.

About twelve years ago I bought a power lift easy chair at the Goodwill store.I brought it home and I plugged it in a wall outlet and I worked the remote control thingy a few times.It seemed to be working ok.I put the chair in my van and I sold it for forty five dollars to a guy who owns a big junk shop on Highway 49 South.A few weeks later he told me he sold the chair to a woman and the chair got hung up,the remote control thingy or something quit working and she had a problem getting up out of that chair.

Does anyone else own a Redsun RF1210? (It's the analog-tuned one that looks like Tecsun's R-9700DX.) I opened mine up in hopes that I could fix the loose tuning control. I couldn't figure out how to get under the tuning scale display, where the tuner control is. I'm looking for advice on how to get under there so I can see what's causing the problem.

I wrote this weblog post about disassembling and reassembling the RF1210 (sorry, no photos):

Jeroen,

The RF Systems "EMF" Antenna is relatively short at 16 Feet
and is a magnetically coupled Antenna. The signal levels are
thus relatively small compared to a much longer 50-80 Foot
Random Wire Antenna. So -Yes- in this instance you may find
that the Sony AN-1 Active Antenna does as well or better than
the "EMF".

Don't forget that the Sony AN-1 Active Antenna :
* Should be Mounted at least 3-5 Feet above your Roof
-or- at least 15-20 Feet away from your House/Building.
* Can be Mounted inside the Attic.
* Can be Mounted Horizontally and Rotated to Null-Out
the main source of your local Noise to some degree.
{every little bit helps :o}

Alternative - Instead of using the Sony AN-1 Active Antenna's
Short Vertical Whip Antenna Element : Use a One Metre
Diameter Horizontal Loop Antenna Element with one-end
of the Loop connected directly to the Sony's Head Unit and
the other-end of the Loop connected via a 300, 450, 600 or
1K Ohm Resister to the Sony's Head Unit. Try the different
Resisters to determine which gives the best Signal Levels
and overall frequency coverage.
Note - Sometimes the sort of Terminated Horizontal Loop
Antenna Element will provide lower noise levels and better
Radio reception then the simple Vertical Whip Antenna
Element. Usually this type of Terminated Horizontal Loop
Antenna Element is installed in an Attic Area.

iane ~ RHF

-
- Small active loop antennas are pricey but
- are most likely the best in town choice.
-
- To get an idea how this type of antenna will work in your location
you
- could build a passive loop at small cost using just coax cable.
-

Only $225 more than I paid for a used R7100. ;-) Does it come with red velvet?

332. The Crystal Ship w/ special Labor Day programming

Newsgroup: rec.radio.shortwave
Date: 2006-09-04 23:11:17 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44FCB294.E06A35@milestones.com>
Source record: 90556

Happy Labor Day to all!

The Crystal Ship will be taking to the airwaves this evening on about 6,875 kHz AM, starting at 2300 UTC and likely continuing through the evening. Transmission will be made with a Johnson Viking Valiant, with a carrier output of approximately 170 watts AM mode.

We have a special Labor Day program tonight, with songs about labor, jobs, hard economic times, and even historical union songs-- spanning several genres from rock to folk to country-- from Rush to Glen Campbell.

We may loop the program and repeat, so those tuning in later or in the west (0100/0200 UTC) may still be able to catch it. Just give it a try on 6874/6875 kHz.

As always, we'd welcome a 'heads up' from those who are able to tune us in along with any program comments, pro or con, email us at tcsshortwave@yahoo.com

Any first-time reporters desiring QSLs should send their reception reports including some program details to that email address (which we actually prefer), or may send it to our maildrop including return postage:

The Crystal Ship
P.O. Box 1
Belfast, N.Y. 14711

Wishing you all an enjoyable holiday and good DX!

Crocodiles and sting rays don't have much to do with radio other than
you heard about it on the radio. But then, what about the guy that heard
about the economy or the prez or whatever on the radio?

Oh, wait--I know! Once again, it's OK for you to discuss non-radio
related topics -YOU- heard on the radio, just not anyone else.

Thanks for clearly demonstrating once again that you are a ...

...H-Y-P-O-C-R-I-T-E!

Stupidity kills thousands more each year than Stingrays.

==========
Two US planes were reportedly involved in the incident in which Nato
soldiers were fired on as troops battled Taleban insurgents in the
Panjwayi district.

It comes after four Canadian soldiers were killed over the weekend, and
14 UK troops were lost in a plane crash.

http://news.bbc.co.uk/2/hi/south_asia/5313716.stm

==========
They're not calling it "friendly fire" anymore. Canadian military
personnel are now using the term "fratricide" to describe the deaths of
four Canadian soldiers in Afghanistan.

http://www.cbc.ca/news/background/friendlyfire/reports.html
==========

The US military should screen out ALL the dxAce dna carrying morons.
It's truly sad when their bombs are smarter than their Pilots.

First thing, you should get your amateur radio license
http://www.arrl.org is a good place to start. You will need to pass the
Technician, Novice, and General written tests plus 5 words per minute of
Morse Code.

I would recommend using a program called Code Quick or you could use one
of Gordon West's amateur radio testing and preparation manuals. They are
excellent sources of beginner information and I find myself looking at
my copies.

As far as equipment goes, I would stick to buying a new piece of radio
equipment especially an Icom 718, Yaesu, FT 840 or any other reasonably
priced radio from 500 to 1500 dollars. That is all you would need as far
as radios go. Plus 100 watts of output power.

You will also need a power supply of at least 20 amps continuous power
and up to 35 amps ICS. You can buy all of this stuff at any reputable
ham radio dealer rather than messing with the online auctions. You can
get badly burned there.

Some sites where you can buy equipment include

AES www.aesham.com
Ham Radio Outlet www.hamradio.com
Texas Towers www.texastowers.com
Gigaparts www.gigparts.com

Plus you will need to learn how to construct a resonant antenna to transmit on the frequencies allocated by your license class. Probably an antenna tuner as well, coaxial cable for your station, SWR Meter. You're probably looking at 1000 to 2000 dollars to get your station up and running.

Just out of the noise here in Uxbridge, MA 00:30 UTC. Listening on
the R75 on the Twisted Terminated Folded Dipole in the Attic . J
Mellancamp tune - Rain on the scarecrow, Blood on the tracks just
ended. Big Bad John playing now.

Ok on Belfast, NY. My brother runs the Country Kitchen a few miles
east in Hornell. I ride Belfast and Cuba and usually do breakfast at I
think there is a truckstop in Wellsville when I'm up there in the
summer.

Copy is getting way better and quite listenable.

Did you take a look at that Racal 6830 receiver and how did it look?

regards,
Bob

356. FS: HP3586B Frequency selective level meter VLF receiver

Newsgroup: rec.radio.shortwave
Date: 2006-09-05 00:52:06 UTC
From: **THE-RFI-EMI-GUY** <rhyolite@nettally.com>
Message-ID: <WS3Lg.18661$Tg1.12847@tornado.tampabay.rr.com>
Source record: 90581
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

For Sale: HP3586B Frequency selective level meter VLF receiver

This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, there is an RF output jack on rear which enables you to sweep filters etc.

The service manual is included.

$495 plus shipping from central florida

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal input, 4kHz to 1MHz frequency range with 135ohm balanced Input

Also, I must add that it is illegal for you to broadcast or transmit on amateur radio frequencies or the AM, FM, or Shorwave Broadcast Bands without a license from the FCC. Jesse, if you have any other questions then feel free to email me at the listed email address.

This may be a very good example of how EVPs are able to find themselves on electronic equipment. The first EVPs were heard with Edison's phonograph (which blows AM rectification out of the water). Tesla, Edison, Marconi - you name it, all tried to design a system for 2-way communication before they died, and definitely believed such a thing were possible. They were also very skeptical of mediums and fraudulent seances, so they were not on the same page as Sir Arthur Conan Doyle and his fascination with faeries (and who was duped by two children making paper "faeries" and photographing them).

Considering Ben heard a reference to a grandfather and the word "weejee," which correctly spelled means Ouija - it would seem like one hell of a coincidence that he was hearing voices about communication with the dead from a rather mundane source and a freak occurrence in which these human voices found themselves on his equipment at the exact time they were discussing that subject matter.

Again, EVPs don't use the same force as the energy involved in making something move or even making an imprint on talc powder in a sealed box. EVP is more of a subtle energy and the voices correlate with the white noise, so many times certain words are speeded up or pitches change to fit the message through. If they were powerful enough to voice themselves whenever they wanted to, in any fashion they desired, then the soul behind them would probably be powerful enough to be considered a ghost and be able to affect electricity and physical objects, but we are talking about weak energy here.

I will give in to one point though - some investigators DO imagine things being said which are not actually there. It happens when the recording is shitty or the voices don't rise far enough above the base volume level of the white noise - and this is clearly making a recognizable pattern out of something meaningless. Even a scientific study has been done on this, but the same study BACKS UP voices which appear at significant volume levels ABOVE the base noise level - and many of these are Class A - meaning everyone agrees on not only the presence of the voice, but what it is saying. The only other thing to conclude from a LOGICAL standpoint would be:

1) AM rectification - which is baseless when vulgarity, personal references to the experimenter, and a lack of music and advertising is recorded

&

2) A hoax - which, for whatever reason, someone wants to fake their own research for the gain of attention, which is downright despicable.

If you had half the energy you spent writing posts trying to rationalize these voices away, you could easily prove for yourself the paranormal nature and existence of these voices. But I understand EVP isn't for everyone and besides, I'm basically asking you to try something that *may* result in you changing your entire belief system from the ground up, and it takes a brave soul to embark on such a risk.

I was a young SWL in 1974 and I remember the musical phrases that many stations used to use before beginning a broadcast or for ID's. I recall having an issue of the WRTH that had musical notation for these phrases. It must have been a lot of work to compile, but I found it very useful. Since I could read music I was able to identify some stations from the phrases, even though I couldn't understand the language.

I'm surprised the Liberty Net is still around. I remember the old days when Sid (K5BLB) and NX0T ("N-X-Nothing-Turd" as Sid called him) were on 3950 fighting every night. Is W1WCR still around? I haven't listened in at least 10 years to that bunch, I figured they had all dropped dead of old age by now.

Vic is still around and still does the NCS each and
every saturday evening, although MANY of the original
Lib Net members are now SK or have gone elsewhere.
A mere shell of it's former self although for ham radio
it did have quite an extraordinary run of time. Today it
seems to attract the kooks and conspiracy nuts instead
of the former in-depth political discussions of it's heyday.

Ole Sid and company can still be heard almost on
a nightly basis on 3.947 LSB during the late evening.
Haven't heard NX on the air in many Years. Don't know
if he's SK or just MIA. Miss him as he was a true
live wire and much fun to listen into. Same with KJI who's
not been heard from in over 2 Years.

This could be an interetsing experiment :) I've already bought
coppertubing and so to make the loop as described on that previous
page, so if that turns to be a failed experiment, I might use it for
this ;)

Just to clarify (I blame my non-native knowledge of English):

So one end of the loop to the element where the whip is normally
attached to, and the other to the unit with the switches? And, do I
connect the loop to the 'inside' connector of the box? Nothing needs to
be connected to the shielding?

I'd love to see a schematic if possible...

You can open it up and disconnect the transducer (a small round black piece with a hole in the top for the sound to come out), but then you wouldn't know when it was about to die, either..

.....
.....
I have heard voices on my stereo and radio but they were always
identified as a cb'er or passing mobile unit. The cheap circuits used
in consumer-grade electronic equipment tend to pick up all sorts of
stuff. When your computer is off it is not totally off: it is still
generating noise. The only way to get it quiet is to pull the plug.and
if it is a laptop. pull the battery. Some people have reported
receiving radio signals on their dental fillings and fence wire: a
junction of any two dissimilar metals is capable of rectification.
Since all we can really know is based on science, I would not turn to
the supernatural until every logical trail has been followed. You might
want to phone in to "Coast to Coast" some night. Those guys love this
stuff and might have some further examples. George Noory tries to keep
a scientific viewpoint amid all the wierdness.

.....
.....
I saw the "barb" of a sting ray on NBC last night. It looked like a
stilletto about a foot long. I knew that rays had stingers at the end
of their tails but this was much more deadly than a stinger. If they
also have venom they are quite a killing machine. Apparently the blade
pierced his heart. What a wierd accident.

Hi Telamon,

It started out as a tilted dipole, but I didn't have enough height in the attic, so RHF suggested that I twist it around about it's axis. It works very nice, but still some noise from all the electronic gadgets in the house. In the fall I will stick a long wire across the river in the way back.

regards,
Bob

At the risk of belabouring the obvious, the reason this site is
interesting is that not only does it discuss items related to shortwave
listening, but it also discusses items that are of interest to the kind
of people who listen to shortwave. If this site only had things like "
I heard Slobovia at 6070 last night" it would have about six people on
it, According to Astrological theory, Geminis are "people of the air"
and their traits are curiosity, good communicators, facile. Why a
group coalesces around a site is a fascinating study on its own, but
calling them "hypocrites" gets us nowhere. I suspect that Geminis are
over-represented in the group but it is none of my business.

I'm sorry, but I just can't feel sorry for the guy. He thrived on media attention and would never be content unless his life was on the line.

I do have a great deal of sympathy for his family though. His children are without their father now. Which also makes me wonder, why would this man continue to expose himself to the kind of risks that he did, even though he had a family that loved and depended upon him. Those in the media and politics who saw an opportunity to benefit in some way from this man's addictive behavior and notoriety, made no real attempts to reign him in a bit for his own good. Mr. Irwin's motives may have been true and good, but his methods were fatally flawed. Granted this was a freak accident, but the man was a modern day Icarus waiting to get burnt.

Guitar Acoustic Speakers. www.onkyousa.com I read an article in my September 2006 Popular Science magazine about that.Those new Onkyo Speakers cost about $2,000. (according to the article I read)

That gave me a bodacious idee.Why not put some good speakers in a regular cheap acoustic Guitar? I own one I bought for $9.00 at a junk shop in Pensacola,Florida a bunch of years ago.I had another cheap acoustic Guitar I bought at the Goodwill store,but I gave that one to the divorced brunette woman next door because she said she wants to learn how to play a Guitar.

<http://www.english.uiuc.edu/maps/depression/photoessay.htm>
* Vote Communist Poster. During the 1920s the American Communist Party
was often a victim at once of government oppression and of its own
sectarian struggles, but in the mid-1930s it adopted a "popular front"
policy of alliances with liberal organizations. Its membership tripled,
but more important still were the thousands of sympathizers who
endorsed party-supported causes.
* Lincoln Brigade Ambulance Corps. Group photo in New York of sixteen
volunteers, American Medical Bureau. 125 American men and women served
in the Spanish Civil War with the American Medical Bureau as nurses,
doctors, and support staff. 1936-1939. The Spanish Civil War was the
great international (communist) cause of the 1930s. Aided by Hitler and
Mussolini, the Spansih military led a revolt against the progressive
(communist) elected government. About 3,000 Americans (communist)
volunteered to fight on behlaf of the Spanish (communist) Republic.

Jeroen,

Where the Whip Antenna Mast screws-on-to the top of
the Mast-Screw of the Sony AN-1 Active Antenna's Head Unit.
1 - Attach one-end of the Loop. (Use a Nut and Washer)
2 - Attach the other-end of the Loop to the Resister.
3 - Attach the free-end of the Resister to the Mast-Screw.

Just a plain simple Wire Horizontal Loop Element.
* You could use Stranded Wire or Litz Wire and Copper Tubing
or even the Outer-Shield of a Coax Cable would be OK too.
* The shape of the Loop could be Round, Square,
Triangle, Diamond, Octagon, etc.
* One Meter Diameter or per Side
* Length of Wire in the Loop about 10-12 Feet.

iane ~ RHF

Thanks for the info. Wow, I can't believe Vic is still around, he's
gotta be in his 80s now. And Sid Mahan (K5BLB), I heard several years
back that the FCC had finally pulled his license, and I also figured he
was probably long dead by now. I read in a newgroup posting several
years ago that John (NX0T) was pushing up daisies. The last I remember
hearing him was probably sometime in late '95, when he seemed to be
having some sort of breakdown. He was very entertaining, and he and

K5BLB had running fights just about every night for two or three years. All I remember about W9KJI was that he and "Norm" used to hold foreign language lessons on 3950 just to keep the Liberty Net off of that freq.

I was a fairly regular listener to the 3950 bunch from '92 until '98, then I got a life and have only been back a handful of times since. I'll have to check it out again soon. I also used to listen to 3853 kHz a lot, they were another entertaining bunch. I wonder if the old drunk James (N5RLX) is still alive? I'd be amazed if he is, he probably experienced liver failure years ago. I know he (finally!) had his license pulled by 2000 or so.

For the Democrat Party to be considered a "Cult"

Ask Doctor "D" ! <http://www.Ask-Doctor-D.com/>

It would need a strong charismatic leader that is prone to
Fits of Public Insanity like a Jim Jones . . .

Does the name Howling Howard Dean come to mind ! ! !

Al Gore says - Jim Jones + Tropical Guyana+ Murder of Innocents
= = = Yet Again - Proof of Global Warming !
{Implication Howard Dean is Full of Hot Air.}

John 'ff' Kerry says - I knew Jim Jones before . . .
I Did Not Know Jim Jones and Howard Dean is No Jim Jones.

just for the fun of it ~ RHF

Recently,it emerged that some ice in Artica (or Anartica) shows that us human beans contributed to global warming.Everytime one of those volcanos spouts off,that contributes far more global warming than us human beans have ever done and ever can do.Earth is about seventy percent covered with water,most of that stuff that goes up,comes back down in the water.A lot of the rest of that stuff lands on the ground and is absorbed into the ground.Over five tons of outer space dust (and sometimes some Meteorites) lands on Earth everyday.

I was at our local Pro Hardware store the other day and espied a new item: an LED flashlight. Now that the hoots and jeers have subsided, this was an entirely new device with the potential to destroy the western world as we know it. This innocent-looking device used a new method to generate the electricity to run the powerful LED . A strong round magnet runs up and down a cylinder as the flashlight is shaken. The magnet passes through a coil wound around the plastic tube and, using the motor priciple, (a wire in a varying magnetic field generates electricity) sends its AC voltage to a neat little rectifier and button cell battery. The flashlight differs from its cranky brethren in three ways. It is easy to run with only a few shakes necessary, its button batteries are very efficient and hold their charge for a long time, and the LED is quite powerful. It is about 7 inches long and 1 1/2 diameter. " Just the thing! I said to myself. I can use it at night in bed when I want to find one of the 20 mini pushbuttons on the DX-394 I use at bedside. This will avoid waking the household, who will immediately ask for money, and the dog, who will want to be let out." However, there is a dark side to all this. The flashlight is made of clear plastic to show the insides, and disassembles easily with its threaded parts. It lies there and cries, "Take me apart..I dare you. See how I work." Booby traps all through history have appeared harmless. It disassembles easily with its cylindrical magnet dropping out of its tube and falling on your foot. It is quite heavy for its size and seems to be made of very good magnet stuff. It was good fun figuring out the principle and circuits and was well worth the C$6.99 it cost. Now comes the bad part.. As I set it down on my desk, six paper clips and a pair of scissors jumped over to the flashlight. " Holy Cow, ' I said, "This sucker is really strong." Put it near a credit card. digital implant, watch, and driver's license and you are a non-person. If enough people put this flashlight in a pocket near their credit cards and wiped out their digital data, the economy of the United States could come crashing down. Apart from that littledetail, the flashlight works well and is highly recomended as a shortwave listeners nightime acessory.

My sincere condoleneces to the family. Given the nature of his show
I'm not surprised that he died in an encounter with a wild animal. The
unfortunate part of this is that he leaves behind a family including
young children to be raised and taken care of. When you take on the
challenge of bringing children into this world I think you also take on
the responsibility to do what you can to be there to help raise the
kids. Steve Irwin falls into the same category as the famous mountain
climber who died on an ascent of some mountain somewhere not too long
ago. Responsibilities to the family should have taken a higher
priority.

If anyone is looking for one of these, check carefully. There are reliable reports that some of them in fact contain a battery that does all of the work, and the 'magnet' that moves back and forth actually does nothing. Once the battery runs down, the flashlight is dead. (And the battery isn't normally replaceable.)

As far as the magnet ruining your credit cards, it's very unlikely. You'd need to actually run the magenet in touch with the stripe to likely do any damage. (Check the Mythbuster's web site for the results of actual tests.)

Come on, now, Brian, don't tell me you believe that Fate controls our destinies and that we have no way to avoid many sources of untimely death...

I have had many opportunities to flirt with death - some I have accepted, but the great majority I have not. Any one of those I rejected could have been THE END - but in rejecting them, I controlled my own destiny and kept myself safe.

Fate is a mythological construct. The future is not predetermined, and one who keeps himself away from poisonous stingrays and active glaciers and tornadoes and whatever else can do him in, will, statistically, live a lot longer than someone who teases death. Steve Irwin had had frequent opportunity to die, always managed to avoid it, but this time, his guard was down and he failed.

I am saddened by his passing. He provided a great positive benefit, if not necessarily the wisest role model. He has left a hole, both publicly and privately.

Ordered! Looking forward to trying it out. Some eBay-dealer offers a
DE31 loop antenna with it.

Is it correct that a loop antenna works with the H-field which is less
susceptible to electromagnetic interference?

I'm having fun with my new Sangean ATS909, but so far I listen to official broadcasters only whose schedule I get on the Internet.

My ATS909 does SSB which seems to be a must for a "real" shortwave radio. But, how do I find out which stations transmit on an SSB?

Also, how do I find these small, unofficial (pirate?) stations which transmit the new world order? The official broadcasters are quite diversified and interesting, but still quite "official".

Thanks,
Daniel

Well I'm not saying fate is absolute but safe people die every day, it's
just that you can't go around being afraid of death to the extent that you
can't pursue your dreams even if that means floating around with stingrays.
If we didn't have crazy f--kers like Irwin in the world, we wouldn't know
half of what we know about the world and we would all still be in Europe for
fear of dropping off the edge.

I think his kids will be just fine. They still have their mom and the memory
of a father that was unique. I wouldn't be surprised if they end up doing
what he did or something along those lines. Both my parents died young and
heck! Look at me! :) lol!

.....
.....
As a matter of fact, I was rather surprised that the flashlight was
fully charged when I picked it up, but I thought that the few shakes I
gave it had charged it. This is in contrast to the furious cranking
that my other devices need. If it is a fake, they sure went to a lot of
trouble to make it look good. Time will tell.

911 Grand Illusion - What Rudy Actually Did & Didn't Do.
www.rense.com

It's called Ineptitude.And speaking of Ineptitude,here in Jackson we have one of the most Inept high Mayors of anybody I have seen in my Life.His name is Frank Melton.

Guest what? On the day his Ineptness was elected,he got in a Police Helicopter and made a big showing by landing at the Mississippi State Fair Grounds here in Jackson.(Hizzhonor had arrived!) Then that same day or a couple of days later,he had cops (including himself and he doesn't have brains enough to be a cop) stopping traffic on High Street by the old Woolfolk Building in down town Jackson.

Sometimes he straps on a hogleg and and rides around with the cops.He is a comedy in and of himself.y'all would die laughing at him.Some folks around here call him Atom Ant.And crime is still on the rise around here.

Try 6925 KHz in either AM mode or USB evenings. Weekends and holiday
evenings are most likely to produce a station.

Has anyone had a chance to use the new KA1107 yet, and how does it compare to the WRX911? They seem very similar (with the one obvious exception being the '1107's alarm clock). The WRX is single conversion, while the 1107 is double, and the 1107 has tone and sensitivity switches, which are not on the WRX. The WRX does get good reviews.

I was just about to order the Sangean PT933 when I noticed the 1107, as I need the alarm and want it in an analog shortwave radio, so this may be the choice.

Source record: 90606

if you are new and wanting to buy a radio, beware of the lies of radio-mart
!
examine this auction:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&ih=015&item=250024846207

I saw him buy this radio about 2 months ago. I didn't bid because it has a
serious problem.

lets look at his lies:

"This receiver is a two very careful owner's from new set and is perfect in
every way, it could so easily be sold as brand new."

and

"The only small thing I have to mention is the two glasses are clouded with
dust, they can be easily cleansed to be perfect but I do not have the time
to do that so its as per the pictures, its only dust."

the two glasses in question are fogged. they are not dusty, THEY CAN NOT BE
CLEANED. this radio is in no way like new or collectable as he says !

then he says:

"have been using the set myself for several months now, it replaced a
Satellit 800 I had and I have to honestly say that it is so much better than
the 800 especially the qudio quality, I didnt think there would be so much
difference but now I know."

well, he hasn't owned it several months and it is nowhere near the satellit
800 in performance ! I can attest to this.

so before you buy your first radio consider you might be basing your
decision on radio-mart lies.

I assume it is a plastic dial glass.I hate plastic lenses,I always have glass lenses in my eyeglasses.There is a product by the name of Microballoons that is suppose to be good for polishing foggy plastic and removing minor scratches.Marine supply/parts stores probally sell the product,it is available in three different grades.I read about it in a magazine back in the 1970's.

I need to get the back of this thing. How's it done??
It's performance has dropped off on FM (markedly) & SW (almost totally deaf) and I wonder whether the telescopic antenna is not making a good connection to the board.

Have you seen the reviews on radiointel.com?

http://www.radiointel.com/review-kaitoka1107.htm

http://www.radiointel.com/review-kaitowrx911.htm

The 1107 is a lot bigger than the WRX911; those reviews linked above
give the dimensions of each radio. Another analog-tuned radio with an
alarm is the Grundig G1000.

No, Mike is correct that RadioMart is a scam artist. It's well known and many of us have him both excluded from our searches and blocked from our bidders list. Notice the subject line - it is directed toward newbies that may not know; if just one potential ripoff is prevented by these warnings, it's worth it.

Do you have an external jack with that model? You could always try that with a piece of wire and a 1/8th plug? Maybe 15 to 20 feet of speaker wire or 18 gauge copper. I don't have one of those models but instead a 909 so I am not all that familiar with the 606. My 909 has screw terminals on the back to remove the back. The best way to go about this is to find a nice clean surface that is flat and be careful not to lose the screws. Get a small screwdriver like for eyeglasses and then look where the antenna connection is and see if you have popped a solder joint. I know that the RS DX 390 was bad about popping solder joints and I was constantly having to solder again and again.

I can't remember the model of Sangean which was the same as the DX-390 but maybe it was 818 or something like that. But you should scan for broken solder joints. I still have my 818 and it still works except it takes a while for the radio to warm up because it has a BFO type squeal. Hope this helps

But John, what if you don't think there is a high likelihood that you will not be there to raise them. Steve Irwin obviously didn't. Should we call the liberals and push for some legislation? I guess everybody that's in the fighting side of the military should be banned from having kids as well as test pilots, firefighters, cops, welders that breath fumes etc... etc... etc... I guess I just hate your Do Gooder attitude and Steve Irwin had as much right to have kids as any of us.

> radio. But, how do I find out which stations transmit on an SSB?

Probably the majority of SSB transmissions are radio amateurs. Try:

3750-4000KHz, LSB, best at night
7150-7300KHz, LSB, best during the day (this band is full of regular AM broadcasters at night)
14150-14350KHz, USB, best during the day

When the sunspots come back around, several higher bands will also be productive.

Is it glass? Plastic? Why would it be permanently cloudy? And if it
is, is this not replaceable from the manufacturer, or couldn't one
just make new "glasses" from hobby shop plastic?

Not defending Radio Mart. Just wondering why this is a deal breaker.

I got my Degen DE1107 last fall. It's a good radio for it's size and price range. I bought mine to use at the office.

To compare this radio to the DE1103 model wouldn't be fair. But the two things I really like about the DE1107 over the DE1103 is the exceptional sound quality and with a set of Powerex 2300 NiMH batteries I can get two weeks (over 70 hours) of use on one charge. That makes this little radio way more portable. I was thinking about getting the WRX911 but I figured the "tiny" sound would get a little tiresome after a while.

The only down side I have about the DE1107 is that the clock display quit working on mine after about four months, and I had to ship it back for a warranty replacement. The one I have now works and sounds just fine!

Pat Buchanan's family are from Oklalona,Mississippi.You are an American Citizen IF you were born here (America) and IF your parents are under the Jurisdiction of the United States.If your parents are illegal aliens,you are NOT an American Citizen even if you were born in America.

I always figured that myself.

It's called taking responsibility for ones choices as one grows up.
Reminds me of an assistant manager at a retail store that I worked at.
Prior to marriage and joining the store he was an avid motorcycle
rider, but a couple of spills out him on sick leave. The store manager
and his expectant wife gave dual ultamatiums: Ditch the bike and grow
up or you are out.

Steve had the ability to have kids just as the rest of us do. I'll agree that it could be called a right, but we have to acknowlege that along with rights come well defined responsibilities. How do you square the responsibility all parents have to support those kids for the next 24 years with one parent engaging in a line of business that is by any definition highly dangerous. The guy did the equivalent of sticking his head in the mouth of an alligator every day. His program was entertaining in the same sensational that the reality programs can be.

Been heard there for a while now. It's a Chinese jammer (Firedrake). Ostensibly jamming a transmission from Taiwan.

It plays straight music, with a silent period from ToH to H+5.

>From your response I'd assume that you have never heard a Class A EVP recording. I'd also assume from your response that I could imagine a dead relative's voice in my head and somehow transfer it onto a recording and have everyone else hear the same thing that I first imagined in my head. If this were so, I'd be one hell of a Cris Angel.

And to the "interference" part of your post - it would be one hell of a coincidence that every paranormal-sounding EVP talking about death, peoples' relatives, and the experimenter's own first & last name in dozens of instances would all be attributed to an AM station no matter what hour the recording is done. If that were so, it'd be one hell of an AM station - one that could only be run by Cris Angel.

Perhaps when you've conducted just a few hours of substantial research in EVP I may take you more seriously, and you may finally realize just how baseless your rationalizations are. You should also look up the history of radio and the life of Edison and other pioneers and then realize just how much they would disagree with your point of view in saying such a thing would be impossible. Were they wrong and you are right? If that is the case then perhaps you should invent something to disprove the existence of EVPs and trace them back to rectification from a human broadcast station?

I'm waiting...

PS And before you stereotype me, no, I don't think Angel is superhuman.

I know a way that you can gain 1 million dollars (to further research
into this phenomenon) by demonstrating your "Class A EVP" recording claim.

His unwavering support for the NeoCons would seem to fit in with a
police state mentality as opposed to a true supporter of democracy. I'm
sure there's a totalitarian state out willing to take him in.

Maybe it is a QC issue with MFJ? They seem to be notorious for somewhat
unreliable and variable QC.

I suppose, then, that you think an adult should not legally have to take responsibility for his offspring?

There have been great minds who have all agreed with this line of reasoning, and a lot of lowlifes who have not. Courts have, in many cases and as far back as many years ago, effectively made this law, because when an argument occurs, the children have often been hung out to dry.

I challenge anyone to provide even a minor tenable argument that he/she is not responsible for the upbringing of his/her children. Not only is it a legal prerequisite, it is ethically de rigeur.

Nobody said he wasn't responsible for raising his kids. Geez You talk as
though they have no future because he's dead and they were left to the
state. According to you two geriatrics, all parents should remain inactive.
You guys are very boring. Your lack of activity may very well give you a
heart attack and that's not fair to your kids. :)

Thanks for the link, I didn't see the review listed on Intel's
homepage. Universal lists the G1000A, but not the G1000 and I didn't
see it under the "Discontinued Portable Receivers" list.

I'm with Brian on this one. If we were to take the tack that no one should
undertake a dangerous occupation lest they chance dying and leaving their
kids without a parent, we would have no police, firemen, high steel workers,
airplane pilots, ad. infinitum.
```

> On the internet, nobody knows you're a jerk.

I've been experimenting some more with the ANC-4 / H-800 combination. I now have the H-800 situated in a nice spot outdoors, and have noticed something odd when it comes to eliminating noise. As soon as I turn on the ANC-4, using the H-800 as the noise antenna, the noise is often

already minimized. For example, the noise level might immediately drop from S6 to S3, and adjusting the noise gain and noise phase controls will have little effect (good or bad) on this S3 noise level. This doesn't happen everytime, but it happens a lot...most of the time.

If I then use a wire as my noise antenna, the noise level might drop one or two S units as soon as I turn the ANC-4 on, but it takes some knob twiddling to get the noise level down to the S3 reading that I get automatically and immediately when using the H-800. And the best result using the wire is always the *same* as the result I get straight away using the H-800. Always.

I've puzzled over why this is. I think it must have something to do with the fact that the H-800 has quite a bit more gain than the wire, making it a better 'match' for the main antenna...which means a lot of the work is done for me? This is just a guess.

Nothing wrong with the dipole being horizontal instead of tilted. I do
not think twisting it is a great idea but it looks like it works OK.

To: BadHam@yahoogroups.com

I'm guessing I'm not telling you fellas anything new,,

Martyn Allison (AKA Radio Mart) is one of the biggest pieces of shit walking around on two legs, he claims to have a Ham ticket but doesn't, he buys radios, as you said under gotta have it, pulls them apart and then sells things off again usually not working.

They arrive in damaged condition, badly packaged, not working, and no where near the description that was initially described over ebay.

And when you give him Neg Feed back he retaliates and gives you neg feed back and he was the supplier, no insurance even though you pay for it, he is a FUCKER!!!!! I have had experience with him and so have many other Hams around the world.

I bought a R4C & T4XC off him, RX arrived damaged, not working, had been dropped , TX was very low in output even though as he stated had new tubes fitted, "BULLSHIT", and It was my fault that they were damaged, got me stuffed how it was my fault when I didn't pack it!!!

If he lived in Aus I would drive to his home kick in his front fucken door and kneecap the fucker!!!! I'm pissed off over this prick, can you tell???

There is another dodgy one and his name is Jon Weiner also trading as radio-tyke, wants it all his way another FUCKER, wont do paypal unless he buys something,, arsehole to say the least..

I've met them all, as we say in Australia "Bewdy"

Just stay home and play tidlywinks with your neighbor and watch the soap operas on tv,you should be safe enough.But wait!,,, I think I once read somewhere that about 25 percent of accidents happen at home. 25 percent of the population of America and all of those accidents happening at home everyday.How many people have been killed by a Stingray before? What are the chances of that happening everyday? How about the people who go swimming and drown? How about about the peole who get killed by Sharks or Alligators or Crocodiles or poisionus Jellyfish or out Hunting? How about the people who cross a street and get killed by a car or in auto accidents? Life is a Risk,everyday.

Your immaturity is really showing. For whatever it is worth I'm a
father three times over, with all three kids fully grown, independent
and in their mid to late 30's. And I'm a grandparent 2 times over who
participates as actively in the life of his grandkids as he did his
kids.

So much for lack of activity, involvement and being responsible.

Shortwave reception will be pretty tough on a train, even sitting next
to a window. You will probably have lots of electrical interference.
Give it a try - who knows. Your best chances for catching shortwave
signals will of course be a night. FM reception should be ok though.

One moer link.

http://www.frn.net/ace/murphys.htm

WHAT FREQUENCIES ARE PIRATES USING NOW?

Keeping in mind that this can and will change with time, the most
popular frequencies in use for North American pirates at this writing
are: (in order of most use)

6955khz in both AM and Upper and Lower Sideband
6950khz mainly being used in the AM mode
7415khz AM & SSB, the old standby from the 70's & 80's
13900khz in the AM mode
15043khz both SSB & AM
1650khz in the medium wave band in SSB
6240khz in AM & SSB (mostly euro-pirates)

European Pirate Frequencies
6200khz - 6300khz - very active at all hours
7415khz - 7550khz AM & SSB
3900khz - 4000khz AM 9995khz - AM
11400khz - 11725khz AM & SSB
12265khz - AM 15015khz - 15070khz AM & SSB

Yeah, those SW bands sure are dead in the daytime, nary a signal to be caught.

100% Correct observation !

I think he needs to get on over to rec.radio.amateur.policy and
join in with that 24/7 flame war that's been running in there since
Nov of 2005.

RRAP is almost at the point of being declared the new 14.313 if you can
believe it... (!)

When using the DE31 with the supplied clips (alligator clips, without teeth), such as with the DE1105, make sure that you connect the ground clip as well! You can connect it to the battery ground, or the ground of the headphone jack. Making the ground connection really lowers the noise level alot (apparent on some frequencies much more than others)!

I just went through this a few weeks ago...(grounding... no, I haven't tried it on a train...) I wonder, in this day and age, if connecting the DE31 against a train window, will raise a few security eyebrows...

Bob, this whole thing about the fogged plastic lens bezel
is clearly a case of the ants shouting at the elephants
to be more careful about where they are walking... ;)

It's a CLASSIC case of a few el-cheapo ham op.'s crying all
so much "sour grapes" over someone else's
success on e-Bay that THEY wish that they could emulate.
They should really get up off their a$$ and open up their own
radio mart on e-Bay instead of cryin the blues in the towel.

An that, as we used to say, is the name of that tune! (grin)

Most people in America who watch cable or satellite tv know about the Festival of Shorts programs that are on the TCM channel.(I like them) My favorite one was the one about those chubby wimmins back in the 1940's and they were in a bargain basement sale in a department store and they were trying to wiggle into girdles and clothes that were about two sizes too small for them.

Well, there are some things to be caught during the day. But dxing
with a portable while travelling in a train is like dxing from the
front seat of your car. Only a few powerhouses will make it through
that blanket of electronic noise.

He would make an excellent subject for a regime such as perhaps China or Iran. After all, the Iranians have their own neocons in the fundamentalist clerics. After all, isn't that what his heroes in the conservative camp in this country really are. Just a different flavor but they lie and manipulate religion for their own aims.

Which works great until you consider the refugee and political
ramifications for doing so. Not to mention even the possibility that
weather will be changed in this country. Is that something that we would
really want considering the potential for misuse?

I've built that magnetic loop yesterday according to Kr1sts' schematic. I'm impressed! I was really wondering how it would work against the An-1, and sofar it seems to work at least equal as good, and then you have to add in the benefits of it being directional. Naturally, having to 'tune in' all the time makes it a bit less practical.

I also got it to start tuning from about 4400KHz (hurray).

I found a cheap ~ 15$ building package for an antenna amplifier (unfortunally 10-140MHz, not covering my fav. the 60 meter) which might be a good experiment to further boost the performance of this hobby project.

If anyone knows of idiotproof schematics (I have about zero knowledge of building electronics) that would also include the 60 meter band, that would be awesome.

Look for extended schedules of stations in Moslim countries.

** INTERNATIONAL. Ramadan gets earlier and earlier, this year running from approx. 22 Sept to 23 Oct, as we are reminded in BDXC-UK Communication as it lists quite a number of Restricted Service Licence FM stations in Britain for that month. Why can`t we have some Ramadan stations in the US? (Glenn Hauser, OK, DX LISTENING DIGEST)

The Muslim holy month of Ramadan will start around Sep 24 in 2006. The exact time is decided by local priests depending on the phases of the moon (Deutsche Presse Agentur, Sep 03, DSWCI DX Window Sept 6 via DXLD)

?? Well, the New Moon occurs precisely at 1146 UT Sept 22. Will it take two days for the Islamic officials to spot it? It`s so quaint that of all peoples, the ancient astronomical and mathematical Arabs cannot base their Ramadan on the precise moment of the New Moon in the modern era (Glenn Hauser, OK, DX LISTENING DIGEST)

You are either missing the point, or intentionally trying to change the
subject. As usual, I'm not sure which. If you will read my posts
(possibly for the first time) you will find I never said firemen or
policemen should not have kids.

>
> Then again members of the Military should not have Kids.

>
> What about Sperm Donner {Dead Beat : No Child Support}

Hmmm...interesting name...possibly the namesake of the famous pass?

> Fathers : Should they be able to have Kids ?

To be perfectly honest I do not understand why some mothers and fathers
choose to have children when they have no intention or the means to
support them. Possibly it is simple laziness when they are getting it
on. Or possibly it is because they know someone else will ultimately
have to step in and complete their work.

>
> ARE REPRODUCTIVE RIGHTS A BASIC RIGHT OF EVERY

> HUMAN BEING ? -OR- Just the Right of your Kind of Good People !

I can't think of a "right" that is not tempered by a "responsibility". Childbearing is certainly one of them. Any simpleton can have sex and create a child...that takes practically no effort or forethought at all. Just drop your pants and go at it. What does take lots of time, effort, love and money is the next 24 years to raise that child to be a responsible caring adult. That means taking reasonable steps to assure that you will be there to carry out those responsibilities. And making a living by doing the equivalent of sticking your head in the mouth of an alligator every day does not strike me as being particularly responsible.

>
> Steve Irwin's Children Are His Children - He Loved Them

Source record: 90835

I'd guess that the noise level drop you're seeing is the result of interrupting the main antenna by turning on the ANC-4, filled back in somewhat by whatever the noise antenna is supplying.

You'll find on the average that signals drop by the same amount as the noise, so you have no net gain against noise ; so don't gauge anything by it.

You get a 6 (3?) dB loss (I'm told - I don't have a good intuitive justification to offer) by combining inputs, which is what you're seeing, since the noise you're seeing is propagating noise, ie really signal, rather than internal noise in the first amplifier.

Probably the intuitive justification would go something like half the signal from antenna A escapes into antenna B, and vice versa, when you combine them, once they're connected together in any way.

You get back the 6dB if you phase the antennas to peak the signal you want, and in addition signal from other directions is not restored, giving you an actual antenna gain.

So anyway - judge the reduction by tuning in an actual noise source and nulling it away. Any arrangement will allow you to null it completely, up to your ability to tweak the knobs minutely (every time you move the null twice as close to the true noise direction, you get 6dB more null; soon you're dealing in tiny fractions of a degree, which is where you have to leave it).

What varies among antenna arrangements is not the null but how much signal is left from other directions after you null. The closer together the antennas are, the less there will be. Except for the case of one loop and one whip, which is quite happy even co-located.

With active antennas, you need to discard wall warts and power everybody off the same 12v supply, or you end up hearing hum in the nulls from tiny amounts of differential ripple powering the various devices.

Being Awake And Staying Awake - versus - Being Told "You Need Sleep!"

7 September 2006
{HRI note 20060907}

'

Again,* if others told you this, then I would not have to, and I could go sailing and do other things you know I enjoy, like art and music and some Fine Particle Physics research for you.

I quote: **

As song birds at dawn on the farm awaken the early risers,
one person is already up;

in fact, he never slept - not once in the past 33 years.

'

You'd think, going without sleep for that long may have its drawbacks, but not for the man in Vietnam's central Quang Nam province,

who has never been ill after decades of staying awake.

'

His ability to stay awake has not only made him famous, but also represents a phenomenon worthy of study.

'

'

Sixty-four-year-old Vietnamese citizen Thai Ngoc, known as Hai Ngoc, said he stayed awake permanently after running a fever in 1973, *(1) and counted more than 11,700 consecutive days of staying awake.

Proving his health as a farmer, as an elderly resident of the Que Trung farming commune, in the Que Son district,

he still can carry two 50 kg (100 pound) bags of fertilizer down 4 km (2.5 miles) of road, walking home, every day.

'

'

Mr. Ngoc currently lives on his 5 ha (12 acres) farm at the foot
of a mountain, busy with farming and taking care of pigs and
chickens all day. His six children live at their house in Que
Trung.

Ngoc often does extra farm work, or guards his farm at night to
prevent theft, and said it took him three months, using the
extra time of nights, to dig two large ponds to raise fish.

His neighbor, by the name of Vu, said Ngoc volunteered the help
of beating the funeral drum during the night, and to guard the
house of the relatives of the dead, so that these could
take a nap.

Neighbor Vu also said, that when the farming commune was planting
sugar cane, several people asked Ngoc to awaken them at midnight
to go to work, since he was up anyway.

Well, for some reason, I'm not getting the loop / active whip combination to behave the way it's supposed to. When using the active whip as my secondary antenna, there is a definite improvement overall, but the noise phase and noise gain controls do next to nothing. With the successive overrelaxation technique you described, I think I occasionally detect minor changes in noise and/or signal strength, but the changes are so slight that I'm never sure whether they're the result of my manipulating the controls or some sort of brief spike (or dip) in band noise--or my imagination. The fact that I'm usually unable to replicate the changes suggests that they're due to one of the latter two causes.

On the other hand, the ANC-4 / wire antenna combination behaves just as I'd expect. The noise phase and noise gain controls are indispensible then, and very satisfying to use.

The active whip has a lot more gain than the wire. I'm beginning to wonder if it just has *too* much gain, so that a satisfactory 'match' is never achieved with the Wellbrook.

I'll keep experimenting and maybe I'll figure out what's going on. Thanks for the helpful advice.

Steve

If you had read all of what Brian was commenting on, you might have a
different opinion.

John S. expressed the following opinion statements:

"It's called taking responsibility for ones choices as one grows up. "
<snips>

and

"Steve had the ability to have kids just as the rest of us do. I'll
agree that it could be called a right, but we have to acknowlege that
along with rights come well defined responsibilities...How do you
square the responsibility all parents have to support those kids for
the next 24 years with one parent engaging in a line of business that
is by any definition highly dangerous."

Brian then said, ostensibly in reference to the opinions stated:

"You have a right to your opinion as long as it's not made into law"

The logical conclusion of this is that Brian doesn't want to make
personal responsibility for anything, including rearing of children, a
legal requirement. Not too tough a leap. It is either that, or Brian
made a comment that applies ONLY to the last sentence...of course, we
all agree that people should be able to pursue whatever exploits they
enjoy, even when an element of danger is involved. On the other hand,
there are already some laws to prevent people from doing dangerous
things to themselves (drugs, sailing around the world in a rowboat
without Coast Guard approval, etc). so Brian's libertarian bent is
already not fully satisfied in practice.

> I think you got lost in Liberal la-la land with that one, Bruce.

Talk about la-la land - this "liberal" believes in personal
responsibility more than any ten self-serving conservatives.

I read carefully and made the proper connections based on the
complete post that Brian quoted, not just the last sentence.

I agree. My concern was his opinion vs. law statement, which applied
ot the whole quoted post. I doubt if John S.'s opinion is different
either.

Source record: 90750

Start by getting the reception equal in the two antennas.

The gain on the noise antenna should be set so that the main antenna with the noise antenna disconnected (or unpowered, if active) is the same S meter reading as the noise antenna with the main antenna disconnected (or unpowered, if active).

You have to shade that to compensate for the phase control increasing the gain at either extreme setting, but at least you start in the right ballpark.

That the loop is itself directional introduces a complication. What you want equal is the signal you're trying to eliminate, in both antennas.

It can happen that the signal is already nulled in the loop, in which case the loop can't help in nulling the signal in the other antenna. Either reorient the loop or listen with the loop alone, in this case.

576. Joe Wilson: The End of an Error

Newsgroup: rec.radio.shortwave
Date: 2006-09-07 16:40:38 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12g0irnrfd22vd3@corp.supernews.com>
Source record: 90752

As National Public Radio described the story behind Joe Wilson's amusingly titled book, The Politics of Truth (available on the $1 table in fine bookstores everywhere), in May 2004:
"Last July Wilson wrote an op-ed piece in the New York Times saying that this particular intelligence regarding Iraq was false. A week later, columnist Robert Novak revealed that Wilson's wife, Valerie Plame, was a CIA operative."

This is like saying: "John Hinckley shot Ronald Reagan; Reagan later died." Every word of that is true, but what it implies - that Hinckley killed Reagan - is false.

In the exact same way, the grand White House conspiracy promoted by Wilson and the mainstream media cites chronological events to prove causation.

The media's conspiracy theory is:

581. Bio-TERROR in America: The Government of Torture!

Newsgroup: rec.radio.shortwave
Date: 2006-09-07 17:08:41 UTC
From: nanodesigns_usa@yahoo.com
Message-ID: <1157648921.330556.126420@e3g2000cwe.googlegroups.com>
Source record: 90757

AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? God help us, blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in U.S.A.

Our government needs TORTURE in U.S.? See details below...
It has your VOTE, support? Abused...

CRITICS (political/social/cultural) are harassed and secretly persecuted
along with their KIDS in schools/colleges, especially, during tests/exams
(Think: Guantanamo "stress-positions" in the context of 1984-technologies)

Bio-Aerosols and aerosolized chemicals are used to cause:
- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
- heart attacks under cover of second-hand smocking
- car crashes/accidents by Vertigo-causing aerosols
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations
This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI

U.S. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and Post*

Fabrication of Fear to grab Power by Fabrication of Believable Info

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms
(SARs) operated illegally in Philadelphia area, Newark (DE), Hampton
and Williamsburg (VA) and other places. Highly volatile aerosols with
and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=krd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and
Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by
searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As
a former NASA Langley scientist working in the area of nanotechnology
and nanoscale particles, I have been recently exposed to the
establishment of secret gas-aerosol rooms inside of United States, at
least in the Mid-Atlantic region (from Philadelphia to Virginia).
First, the highly irritant aerosols have surfaced at the NASA Langley
Research Center in several safety accidents. Investigations were
blocked, probably, because of lack of Congressional approval for such
financially-lucrative research at NASA. Later, these aerosols had been
encountered outside of NASA in Virginia, Delaware and Pennsylvania
.
This points out to yet another proliferation of originally-sensitive
technologies into domestic American life to hurt and harass people
without a proper oversight and much control. This amounts to torture,
extra-judicial prosecution and authoritarian intimidation tactics. The
use of such irritants and the operations of the secret gas-aerosol
rooms are gross violations of human and constitutional rights of
American citizens and various domestic and international laws.

------------------Full text of an ad from Philadelphia's
philly.com--------------------------
TORTURE IN USA: Secret Aerosol Rooms
US Scientist needs legal help dealing with the secret aerosols rooms
(SARs) operated illegally in Philadelphia area, Newark (DE), Hampton
and Williamsburg (VA). Highly volatile aerosols with and without
bacterial content cause dry cough, airways and eyes irritation, chest
pain and inflammation. FBI and Homeland Security associates are likely
operators of SARs, while collaborators may be hotel staff and

landlords, who get financial/material or other incentives. US citizens
and kids are victims.

Torture is any act by which severe pain, whether physical or
psychological, is intentionally inflicted on a person as a means of
intimidation, deterrence, revenge, punishment, sadism, or information
gathering. At times, medicine and medical practitioners have been drawn
into the ranks of torturers, either to judge what victims can endure,
to apply treatments which will enhance torture, or as torturers in
their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
With neo-Naz (or Con) embrace...
New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

No it doesn't. I think you guys are way too critical of the mans activities and you sound as though you want to limit the activities of others you deem irresponsible. The man was a professional that died doing what he loved. And it seems to me that that train of thought by liberal do gooders in the past has resulted in useless, redundant and stupid laws that do nothing but limit our liberties and rights as Americans.

You know what your original comment - in other words, Don't try to
legislate behavior to force responsibility. In short, my comments are
that this had already been done.

Guess what? I agree! Including going to sea in a rowboat! I am foursquare in favor of a person being able to do what he/she/it wants, as long as it does not harm another. *That's responsible.* I am not now, and never have been critical of Steve Irwin's activities, never saw them as anything but beneficial, and in fact have always admired his enthusiam for what he does - he and I are quite a bit alike, except he did it for a living and I do it as a hobby. You will find no bigger fan than me. I miss him enormously.

Responsibility and freedom are a tough balancing act...but they need to be practiced together, or somebody will suffer. Good legislation strikes a good balance (that's what legislation is all about at its core), bad legislation does not. You cannot condemn the good because some is bad, but the bad stuff ought to seriously reconsidered.

BJ

Who is Robert Fisk?

One individual who considers Fisk to be an unbiased, neutral source of news is Osama bin Laden. Says bin Laden, "Is defending oneself and punishing the aggressor in kind, objectionable terrorism? If it is such, then it is unavoidable for us. This is the message which I sought to communicate to you in word and deed, repeatedly, for years before September 11th. . .

Fisk has written or contributed to four books. One of the most recent is The New Intifada: Resisting Israel's Apartheid (Verso, 2001), in which Fisk joins anti-American radical writers Noam Chomsky,
http://www.discoverthenetwork.com/individualProfile.asp?indid=1232
the late Edward Said,
http://www.discoverthenetwork.com/individualProfile.asp?indid=634
and other leftists. Another is Iraq Under Siege: The Deadly Impact of Sanctions and War (South End Press, 2002), in which Fisk joins with Chomsky, Australian anti-American radical John Pilger,
http://www.discoverthenetwork.com/individualProfile.asp?indid=1763
Marxist historian Howard Zinn
http://www.discoverthenetwork.com/individualProfile.asp?indid=939
and other leftists in blaming U.S. sanctions (instead of Saddam Hussein's greed for wealth and weapons,
http://www.discoverthenetwork.com/individualProfile.asp?indid=1344
and the corrupt United Nations Oil-for-Food Program)
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6529
for malnutrition, disease and increased infant mortality in Iraq.
http://www.discoverthenetwork.com/individualProfile.asp?indid=1764

Who is George Galloway?

British Member of Parliament George Galloway ranks among the most impassioned advocates of the de facto alliance that has been forged between Western leftists and radical Islamists...

Galloway is by no means a disinterested, objective observer of the Iraq's conflict with the U.S. and Britain. He is in fact a great admirer of Saddam Hussein, whom he personally told: "I salute your courage, your strength, your indefatigability." More specifically, he praised Saddam for paying financial rewards to the families of Palestinian suicide bombers who target Israeli civilians. Galloway, who recalls the day that the Soviet Union fell as the worst day of his life, has said: "Just as Stalin industrialized the Soviet Union, so on a different scale Saddam plotted Iraq's Great Leap Forward."

Galloway had received valuable oil allocations from Saddam in exchange for the pro-Saddam, anti-West positions he (Galloway) took with regard to the UN sanctions against Iraq. In all, Galloway received six allocations totaling 20 million barrels of oil.... In short, Galloway was on Saddam's payroll and received about $585,000 in annual profits from Iraq's exports under the Oil-For-Food program.

And if this isn't bad enough, people are being abducted by aliens every day, and nobody cares.

<nanodesigns_usa@yahoo.com> wrote in message news:1157648921.330556.126420@e3g2000cwe.googlegroups.com...
AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? God help us, blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in U.S.A.

Our government needs TORTURE in U.S.? See details below...
It has your VOTE, support? Abused...

CRITICS (political/social/cultural) are harassed and secretly persecuted
along with their KIDS in schools/colleges, especially, during tests/exams
(Think: Guantanamo "stress-positions" in the context of 1984-technologies)

Bio-Aerosols and aerosolized chemicals are used to cause:
- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
- heart attacks under cover of second-hand smocking
- car crashes/accidents by Vertigo-causing aerosols
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations
This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI

U.S. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!

Symptoms-mimicking aerosols do HARM, weak or ill people.

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and Post*
Fabrication of Fear to grab Power by Fabrication of Believable Info

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

--

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms
(SARs) operated illegally in Philadelphia area, Newark (DE), Hampton
and Williamsburg (VA) and other places. Highly volatile aerosols with
and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=krd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and
Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by
searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As
a former NASA Langley scientist working in the area of nanotechnology
and nanoscale particles, I have been recently exposed to the
establishment of secret gas-aerosol rooms inside of United States, at
least in the Mid-Atlantic region (from Philadelphia to Virginia).
First, the highly irritant aerosols have surfaced at the NASA Langley
Research Center in several safety accidents. Investigations were
blocked, probably, because of lack of Congressional approval for such
financially-lucrative research at NASA. Later, these aerosols had been
encountered outside of NASA in Virginia, Delaware and Pennsylvania
.
This points out to yet another proliferation of originally-sensitive
technologies into domestic American life to hurt and harass people
without a proper oversight and much control. This amounts to torture,
extra-judicial prosecution and authoritarian intimidation tactics. The
use of such irritants and the operations of the secret gas-aerosol
rooms are gross violations of human and constitutional rights of
American citizens and various domestic and international laws.

----------Full text of an ad from Philadelphia's
philly.com----------
TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and landlords, who get financial/material or other incentives. US citizens and kids are victims.

Torture is any act by which severe pain, whether physical or psychological, is intentionally inflicted on a person as a means of intimidation, deterrence, revenge, punishment, sadism, or information gathering. At times, medicine and medical practitioners have been drawn into the ranks of torturers, either to judge what victims can endure, to apply treatments which will enhance torture, or as torturers in their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
With neo-Naz (or Con) embrace...
New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture

And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

605. Communist Chinese ally Pakistan makes "peace" with Osama bin Laden

Newsgroup: rec.radio.shortwave
Date: 2006-09-07 19:38:36 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12g0t9fluhhh273@corp.supernews.com>
Source record: 90781

The military regime of Pervez Musharraf signed an agreement with Taliban forces in North Waziristan, allowing freedom in the region to any terrorist who "is being like a peaceful citizen" - including Osama bin Laden himself, although the military tried to backtrack from that later. The deal is sending shockwaves through the region. For those of us who have never trusted the Musharraf regime - due to its ties to Communist China and pre-9/11/01 support for the Taliban, this is not much of a surprise. Communist China has been an ally of Pakistan for over 50 years, and Zhongnanhai has its own long history of support for the Taliban and al Qaeda.

No Larry, I actually graduated from college. Did you make it past sixth grade? And if so, at what age, 25 or so?

Over six billion people on Earth,about one point seven billion of them are muslims.Even it was divided half and half,I just dont believe those muslims can or ever will make every body accept islam.Besides us non muslims know how to invent and make super duper Weapons and all they know how to do is make mud huts to live in.islam is not a Religion,islam is a cult,a cult of death.So,,, we are injuring and killing muslims,I say Kill them all before they kill us.I am all for the War on terrorism no matter how long it takes.

The only one trying to re-write history is the Bush administration.
Several years after lying about WMDs and a Hussein/Iraq connection about
9/11 did Pres. Pathological Liar and his band of cherry-picked
intelligence swilling men and women come clean and admitted that they
had lied about it.

Where was Bush during 9/11? Where as Bush during Katrina? That's one
gutless Pres. you have!

I don't think the problem is due to the orientation of the loop because
we're talking about something that happens all the time and not just in
relation to one or two particular signals. I'm just about convinced
that the H-800 is simply providing more signal than the ANC-4 can
handle. I haven't tried any form of attenuation yet, but am thinking
about how to arrange that.

Would the two of you PLEASE consider getting on 14.313
live some weekend morning or afternoon? The good ole boys
freq. JUST AIN'T THE SAME since Dumbass Donnie signed
off of ham radio for good some Months ago and the "Kind Jewish
Indian" finally left the "GOMER Club" (see below) and finally
made it to a comfy room in the Alzheimer's Ward of the local
rest home.

I am VERY sure that the both of you and your
RRAP/RRAM/RRSW entorage would be a
welcome act on the 14.313 stage, where you can
all join the ranks of past RF Clowns like FZ, MUJ
PZT, OTK,OKA, NX-Tango and many other
now enshrined in the FCC Hall of Fame.

WHY NOT CONSIDER IT BOYS?
YOU'D BE THE TOP LIVE COMEDY
SHOW ON ALL OF HAM RADIO!

Terms you may want to remember:

GOMER - "Get Out of My Emergency Room!. An acronym
used by the medical workers who frequent AT to refer to
people (usually old) who are on the verge of an inevitable
death and who cling to life by making entirely too much
fruitless use of the services of the medical professions.

Fap - Onomatopoeia for masturbation. Most often used
in the context of masturbating over someone else's misfortune.
Potential SRs (XYL's) can also be described as "fap-worthy".

Grogan - Turd.

Pinch a loaf - To use the anal sphincter to break an overly
long Grogan in two as it emerges, thus causing the lower
half to fall off into the bowl.

Peckerwood - An inversion of woodpecker, is also used
but usually only with negative connotations. It was coined
in the 19th century by Southern blacks to describe poor
whites. They considered them loud and troublesome like
the bird, often with red hair like the woodpecker's head
plumes. This word is still widely used by Southern
blacks to refer to Southern whites.

fas-cism (fash'iz'em) n. A system of government that exercises a dictatorship of the extreme right, typically through the merging of state and business leadership, together with belligerent nationalism.
-- The American Heritage Dictionary, 1983

"Victory means exit strategy, and it's important for the president to explain to us what the exit strategy is...I think it's also important for the president to lay out a timetable as to how long they will be involved and when they will be withdrawn."
------George W. Bush to the Houston Chronicle, April 9th, 1999

I admit that I once posted at www.bianca.com in the Womens Topics
section,(I dont lie) that I was a female girl and something about a
dog.I was only having fun.,,, I admit that,sue me! (I dont remember if I
was drunk or not at the time,I just dont know) Yes,I do have another
webtv address (six of them,actually) that is a female name and yes,once
in a great while,I pretend that I am a female to them wimmins.Is there
anything so d..n wrong with that? I have to have a little fun once in a
while or I would go crazy.Sure,at the Goodwill store,I will try on
ladies hats and hold up ladies thingys in front of me just for kicks,but
them wimmins and customers over there know I am straight an only funnin
around.Come on,sue me!

You can build an attenuator of any value with three resistors in a metal box with two appropriate connectors.

http://groups.google.com/group/alt.pirate.radio/browse_frm/thread/07ecbe52b97a7d9a

Most of the shortwave pirate activity in the US currently takes place
in the range of 6850-6955 kHz, while some of us do experiment with
other frequencies.

6925, 6955, 6851 and 6875 kHz are the most active frequencies,
currently anytime between 2200-0300 UTC

This forum includes up to the minute loggings of pirate broadcasts in
North America (see "Ace loggings" section):

http://www.frn.net/vines/

Although it is not currently accepting new subscribers due to spam
issues, you can still view the loggings and try hearing what everyone
else is hearing while they're still on the air.

Also, you might want to join the "Free Radio Weekly" free pirate radio
email bulletin, which lists loggings and other items of interest. To
get a free subscription, just email your request to

freeradioweekly@gmail.com

Good Luck!

Several probelms there, fatboy.

First of all Morkie's not licensed to go there. He's already got enough law looking over his shoulder I doubt he'd risk going bootleg on frequencies he's not licensed for and add a federal violation to the pile.

Secondly, I wouldn't want him there...The notorious reputation of the frequency notwithstanding, I don't want him on 11 meters, let alone an Amateur allocation, trash-talking frequencies aside.

Lastly, there would be some expectation of Morkie acting at least marginally adult-like, and to tell you the truth, I like my odds on the Power Ball and Mega Millions a lot better.

So sit back, engage your kill filter, and have a nice day.

Or don't...I don't care.

Steve, K4YZ

> Who is Kr1sts? How did you build it?

http://www.kr1st.com/swlloop.htm

Mostly according to this article. It was really easy to build. Hardest was to find a proper capacitor wich I eventually found in my girlfriends alarmclock (lol).

I'm going to skip the amplifier, after some research I learned that it'll only amplify the whole sound, and adda bit of noise to it as well, so it won't do me much good.

Instead I'm going to build another loop, geared towards the 60 meter in specific. It will be a multiple turn loop made of a 1/10 wavelenght copper tube. More information can be found here: http://home.datacomm.ch/hb9abx/loop80m-e.htm

I'll start by using the capacitor they advise there, a 10-125pF so 3.9 to 10 MHz will be covered, including my fav. the 60 meters and an amateurband I regurarly listen to.

I'm really enthousiastic in magn.loops after this first experiment, and might have a AN-1 for sale in a not too long time from now. I heard (on this newsgroup) one fetched 200$ a week or so ago on eBay?!? That'll be great and allows me to build 4 more magnetic loops! ;)

Hi Telamon,

Did you simulate it?

It seems to work very nice, but I don't have a lot of experience with
too many swl antennas. as I said already, RHF suggested the twist.
I'm not sure if he had simulated or not.

> NEO
>

In Notepad click "Edit" and unclick "Word Wrap"
then click "Set Font":

Set "Size:" as small as possible (8).
Choose "Font style:" that is easy to read. (Regular or Bold?).
Choose the "Font" that is easy to read using the above settings.

Print a test page and see if that helps.

If you can find a printer that uses wide paper, 160 columns wide / 14-16in
wide paper, you would not have to waste your time editing the files.
Perhaps a Kinkos near you may have such a printer you could use. Check the
phone book.

Hillary Clintoon's Communist spy Ronald N. Montaperto
Back ground info http://www.softwar.net/redteam.html

Montaperto could receive 40 to 57 months in prison under sentencing guidelines, but attorneys and friends of Montaperto are seeking leniency and no jail time.

Montaperto has associates (The Clintoons) among senior intelligence and policy officials at the Pentagon and White House, which is why officials say he likely will receive a light sentence.

Stephen P. Anthony, Montaperto's attorney, declined to comment, as did the Pentagon and officials from the Defense Intelligence Agency, where Montaperto had worked.

I also remember those fine days and have about 1 hour of recordings
from that by-gone era that I would be willing to burn on a cd. It has
everything from W4NTI going nuts to NR5T, FZ, and a bit where someone
tells "brother John" how much he loves God. It will bring tears to
your eyes.

Occasionally there are cross posts that are very educational. For example, with this thread I didn't realize there was a newsgroup devoted to truckers. When I picture a trucker I picture someone not familiar with the Internet or specifically, Usenet. Now I know better.

In that case I must say you are very short sighted. And no it's not a
flame. But I know people in thier 80's that could show people about
computers and the internet. And not just in thier 80's. Never for one minute
assume that there isn't a boundless amount of people of ALL background types
out here, in and on usenet, as well as the internet. That included less
desirables as well.

752. SHORTWAVE STATION OMEGA ONE RADIO STILL GOING STRONG!!

Newsgroup: rec.radio.shortwave
Date: 2006-09-08 19:09:34 UTC
From: N9OGL <toddaug555@yahoo.com>

Low Power Shortwave station Omega One Radio is still going strong on 13.556.00 MHz in the the 22 meter shortwave band, Despite "complaints" on the newsgroup about the station. The station began in July of this year with a output of 5 watts and then increase it to 10 watts followed by 25 watts, then 50 watts and now is running with a power output of 100 watts. The station has been heard mostly out east, yet some people out in the western part of the United States claim that they too are also hearing this little station. The station runs 24 hours a day, 7 days a week and will continue to grow and improve itself and be the best it can be!!

Correct but some of the support ships DO use HF. SRB recovery, cape radio, etc.

WA3NAN is great when they are on the air.

The first link is a manually tuned loop and the second is a motorized version of the same. A tuned loop will be quieter than a broadband loop design I posted earlier.

The drawback with the tuned loop is you have to tune it along with the radio complicating the operation of tuning in a station.

Looking at the first link I think the design would work better if there was more separation between the pickup loop and the tuned loop. I would attach the pickup loop on the other side of the PVC pipe.

The second suggestion is to use a series 50 ohm resistor from the coax center conductor to the pickup loop. This may not do much other than sharpen the peak of the tuning response.

If you were really modern, you'd be doing podcasts over the Internet,
would reach the whole world and, best of all, would be legal. Short
wave is dying. Most of the big SW stations are going off the air.

You should take a page out of Lloyd's book. You should use modern
technology like a TRS-80 and an electret microphone.

I don't know what it will take to wake up the mindless trbal groupthink neocon war lovers on this website, but the following quotes may shed some light.
"let me just point out that treating people decently is sometimes a competitive advantage. In America, basic health insurance is a privilege, in Canada it's a right. Andin the auto industry, at least, the jobs are heading north."
Paul Klugman, The New York Times, 7.25.05
At this point, The RRS chorus starts up, " He's an asshole. LMFAO, dumb Canuck."
Klugman is referring to the move of auto manufacturing to Canada. In addition to Toyota, " in March, General Motors announced it would spend 2.5 billion in a massive revamp of its Oshawa operations. Ford of Canada is in the process of a 1.2 billion redevelopment of its Oakville facilities."
But this is not only why Toyota is moving to Canada. The president of the Automotive Parts Manufacture's Association said, "Nissan and Honda have encountered difficulties getting new plants up to full production in recent years in Mississippi and Alabama due to an untrained-and often illiterate work force. In Alabama trainers had to use pictorials to teach some illiterate workers how to use high-tech plant equipment.....The educational level and the skill level of the people down there is so much lower than it is in Ontario."

Google " New Toyota Plant in Canada" for sources

While the RRS chorus is sitting around making up new anti-Canadian insults, we are eating your lunch on our way to the bank. All over the world, young people are going to school and getting ready to compete, but meanwhile, back at the ranch USA, the good ol' boys are settin' on the porch lookig for someone new to chase off. Their dollar is dropping in value, factories and jobs are leaving the country, the import-export gap is gigantic, trillions of dollars have disappeared from the Pentagon, the national debt is pushing 9 trillion dollars, foreign creditors are buying up roads, parks, water, the apparattus of a police state is growing daily, the housing bubble is bursting, and the country is engaged in a stupid war for fun and profit of the miliary-industrial complex.
You're going down boys and I pray that you don't drag Canada with you....73...

No I don't simulate antennas. Antennas follow basic rules and usually
all you have to do is apply some logic. I don't see any advantage to

twisting a folded dipole other than shorting the physical space need for one cut to some frequency. Coiling elements generally causes them to be less effective on receive so I don't expect doing so would result in an improvement. If you can fit a folded dipole in the space you have cut to the lowest frequency you want to receive then there is no reason to twist it.

THIMK

...73...

763. Hitler, Stalin, Tojo and Islamic Terrorism

Newsgroup: rec.radio.shortwave
Date: 2006-09-08 20:22:31 UTC
From: Fuehrer Mahmoud Ahmadinejad <dr-ahmadinejad@president.ir>
Message-ID: <edsjds$5mg$1@emma.aioe.org>
Source record: 90939

Why are Hitler, Stalin, Saddam and Tojo still heroes, and what that has to do with the war on terrorism. The fighting in Iraq is demonstrated again that bloody tyrants never lose their fan clubs, even when they lose their power, and their lives. Hitler, Stalin, Saddam and Tojo were all murderous tyrants that killed people in the tens of millions, and terrified billions. Yet today, there are still many people who still admire these thugs. After the Cold War ended, "neo-nazis" began to appear, especially in eastern Europe and Russia. General Tojo, the dictator of Japan during World War II, never lost his popularity in Japan. And to this day, Japanese leaders go to Tojos tomb to pay their respects.

And Iraq? Same thing. Saddam Hussein may have terrorized 80 percent of the population, but among the Sunni Arabs, Saddam was, and will always be, a hero. Saddam, like his other tyrant buddies, knew how to spin lies, promises, threats and disinformation to capture the popular imagination. While the denazification program forced Hitler's admirers to go underground, Allied counter-intelligence knew there were still a lot of them out there after 1945. So did the communists on the other side of the Iron Curtain. Unlike Hitler's nazis, Saddams fans continue to fight. Saddam spun a web of lies that were popular throughout the Sunni Arab (and Sunni Moslem) world. It was the usual "stab in the back" (by the West, and infidels in general, including Shia Moslems, and some non-Arab Moslems, like Kurds) argument that is being used by many other Islamic demagogues. It's a favorite pitch among dictators of all kinds. The clerics who run Iran have used it for decades, and North Korea has made xenophobia into a state religion.

Many conservative Islamic religious leaders have painted themselves into a corner by playing the hate card. Unlike Hitler, Stalin and Tojo, who were able to call on world class armed forces to do their dirty work, the Islamic radicals only have terrorists. Iraq is their battleground, and all the faithful are being called on to come there to kill foreigners, and any Iraqis who backs the foreigners. Since about 80 percent of Iraqis do back the American presence there, the Islamic call to jihad has been killing more Iraqis than Americans. Not surprising. Both Stalin and Mao killed far more of their own people (over 50 million Russians and Chinese), than they did foreigners. The Islamic radicals are not all that efficient as killing machines, but they are trying. And don't let them get their hands on a nuke. If they can figure out the "on" switch, they'll use it.

How do you deal with fanaticism like this? There's plenty of historical evidence that the only cure is to keep killing the crazies until they stop coming after you. After a while, the fanatics lose their following, more from disillusionment than from death. This is not the first time there's been a bout of Islamic fanaticism and mass murder. The Islamic community will have to figure out how to purge themselves of this nasty habit. In the

meantime, it is Moslems who suffer most from it.

It's fashionable in the West, especially Europe, to let the Islamic radicals off as victims of Western imperialism and colonialism. This was similar to the European attempts to appease Hitler in the 1930s and Stalin into the 1950s (and the Soviets right up until the communist collapse.) In the 1980s, Europeans were up in arms at Ronald Reagan's efforts to bring down the Soviet Union. The latest victims are Islamic terrorists. Misunderstood, and not really at fault for their atrocities, these thugs are a real challenge for the appeasers. Islamic radicals want nothing less than total surrender, and a return to the 8th century. The victims here don't see a pattern, only another opportunity to seek an easy, and dangerous, way out.

FYI, I'm an over the road driver, somewhere in -any- of the Lower 48, 28 days a month or more.

I have about 20,000 posts /10 yrs on Usenet (primarily in Rec.scuba), and I have broadband PCS in the truck.

As a wildly unsupportable guess, I'd say about 40% of OTR drivers have a notebook in the truck.

They are, at least, far from uncommon.

We use them for work as well as recreation.

Mapping routes and destinations, book keeping, and locating facilities like truck scales, maintenance facilities, and fuel stops, all on the internet.

For recreation I dock my iPod, and download books on tape, and play then via the truck's sound system.

DVDs of course.

Mounted on a Jottodesk made specifically for Freightliner.

Also many truck stops offer Wife, as well as some state rest areas.

Data with varied spaces between them, what a pain.

Here is a trick to deal with data like this. Copy and paste the data
from the web page by the usual click, hold, and drag the cursor down the
page, once selected control-C to copy and control-V to paste the data
into any text editor program and then be sure to save it as text not a
Micro$oft word document for example. Now that you have the data saved as
a plain text file launch Excel and from there use the open command on
the text file. What should happen then is the "Text Import Wizard" will
open with formating options and an example of those selections on the
text file. You want to pick "Fixed width - Fields are aligned in columns
with spaces between each field." The example of the beginning of the
text file should show the data lining up. You will end up with the data
in columns in the spread sheet you can sort on.

True, TRS-80s are a little classier than a Mac, but serious technophiles should try to get hold of one. I hear that you can purchase them used, so maybe that would be a viable option for you.

Once you have experienced the awesome power of a screaming, 4.77 MHz Z80 processor, you will never go back. TRS-80s rule, Dude.

I'm auctioning off my SW100s on eBay. It does include the AN100A
antenna which the radio came with it.

The auction ends 10 PM Eastern Daylight Time Sunday, Sept 10th 2006.

(That's 0200 on the 11th, UTC time and date, for all you Shortwave
Listeners.)

I'll probably auction my Torus Tuner Loop within the next few weeks.

You can see the complete auction description on eBay:

Here is a short URL:

Frank and John remember 911 on tonight's "The Right Perspective," and discuss the loss of not only our former producer Rod Coppolla, but the impact upon the entire nation and why we are at war with Mohamadanist fanatics. Plus, an interview with Gerald Posner, whose book "Why America Slept" deals with the bungling of governmental agencies during the Clinton Administration that led to 911.

Plus, the N.Y. Times and its continuing front page stories that are predjudiced against the President, and the need for a Kurdish homeland and how it relates to Suid Afrika's BoereVolkStaat.

On "Hallo Afrika!," the ethnic cleansing of Boere names off of public places, and an interview with Andre Alkema, who has gathered 70,000 signatures against the renaming of Pretoria. Also Putin's Visit to Suid Afrika and the ANC's communist background will be discussed.

The Right Perspective - heard every Friday 10pm EST over shortwave WWCR 3.215 Mhz and the Internet at www.therightperspective.com.

785. 1st Responder Wireless News

Newsgroup: rec.radio.shortwave
Date: 2006-09-08 22:18:45 UTC
From: "nyscan@gmail.com" <nyscan@gmail.com>
Message-ID: <1157753925.210550.5040@i3g2000cwc.googlegroups.com>
Source record: 91011

1st Responder Wireless News (1RWN), already very active, and recognized by most media outlets and Public Safety Officials as the "Industry Leader" in most of the East Coast States, is actively looking for News Correspondents to become active as Incident Dispatchers for your area.

1st Responder Wireless News, a subsidiary company of 1st Responder News, is now consider the leader in the emergency notification industry, sending incident alerts to pagers, cell phones and e-mails.

We are now active in AL, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IL, IN, KY, LA, MA, MD, ME, MO, MS, NC, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SC, TN, TX, VA, VI, VT, WA, WV and Canada. 1RWN has already acquired many well known Paging Notification Services including TAC-9 Paging, East Coast Paging, Ohio Fire News, Maryland Fire Network, Virginia Fire Net, Toronto Fire Net, Metro Fire Paging and the National Incident News Network (NINN), with several additional under negotiations. This is a very exciting time to become involved.

1RWN sends instant notifications for any newsworthy Police, Fire, Rescue, Traffic, Weather and Breaking News event within our coverage areas, to pagers, e-mail, cell phones, PDAs and to our online streaming tickers. The vast majority of our Dispatch Staff is comprised of Volunteer and Career Firefighters, Police/Sheriff Officers, Haz-Mat & Rescue Technicians, 911/ALS/Medevac Dispatchers, ALS, BLS & OEM Personnel and Skywarn Spotters, on local, county, state and federal levels.

1RWN is in the final stages of development of our Dispatcher Rewards Program which will allow our Dispatchers to log into an online store and buy products ranging from cameras to antenna to two-way radios using points they've earned by being active on our system! EVERY Dispatcher on our system will now reap rewards for their hard work, dedication and loyalty!

1RWN has also recently gone live with the industry's MOST COMPREHENSIVE Customer Interface selection process which allows our Subscribers to select EXACTLY what information they want to receive, from what areas and to what devices. In other words, you can select to receive JUST building collapse incidents in Yonkers to be sent to your cell phone, with bridge closures in Philadelphia being sent to your pager. You are no longer restricted to receiving ALL alerts from a region, now YOU decide what you receive from the average 16,000 monthly alerts sent from any of the areas we cover - 37 States, Washington DC, or Canada! EVERY active 1RWN Dispatcher qualifies for complimentary service!

If you are interested, or would like more information, please check out the website at www.1RWN.com and/or e-mail Scott@1RWN.com.

Why settle for the rest...when you can be with the best?

I currently have 5 different MFJ products and cannot claim any fault on any of those items; they all do what they are supposed and do it well. I did have an MFJ analogue audio processor which I sold when I picked up a MFJ DSP unit. My overall experience has been positive but I have certainly read enough to realize that there are problems with MFJ.

Thanks for the heads up on the Ameritron acquisition; I didn't notice that MFJ acquired that company.

Bruce,

It is well worth the effort to have a switch in place that will swap the imputs. I had one put in when I had the unit modified. My biggest gripe about the 1026 is the darn jumper! I like to change the jumper connection but you need to open the unit to do it.

I am sure you are trying to help but I must have picked up some of
DXass'es thought processes and am unable to get your drift. What I am
trying to elicit from DXass (alleged college graduate (probably Kay
Kyser's College of Musical Knowledge))is WHY he hates Canada and
Canadians. He seems to be shifting his ground to dumb-ass Canadians but
this doesn't change the argument Some causes for this hatred could be a
real or imagined injury (he says no),.some resentment over a fine or
criminal charge (he says no), or if there is no reason, some
deep-seated personality disturbance that shows itself as a generalized
hate probably based on low self-esteem or even self-loathing. Sadly,
all my efforts to help have been rebuffed. Given this background,
could you elaborate on your post so that I or even DXass can get the
idea....73.....

BUZZZZZZZZ! Wrong answer! We were looking for "1.77" Mhz.

The Model 1 was 1.77 Mhz, the Model 2 was 4 Mhz, the Model 3 was 2 Mhz,
the Model 4 was 4 Mhz.

But thanks for playing!

Arra,extuse me,but what's that about Auto jobs heading North?
www.devilfinder.com Southern Automobile Corridor
www.southernautocorridor.com

Those Auto factories and jobs are heading South.(South is always best)There is a Nissan factory about three something years old and other Auto related factories about fifteen miles (some of them are further North of me,but they are in Mississippi) North of me,between Jackson and Canton,Mississippi.

.....
.....
This attitude is doing the US great harm. The skills required fo run
modern factories are quite different than those required in Blake's
Satanic mills. Factories create wealth and and require workers who can
handle computers. A service economy does not create any wealth and to
denigrate factories is to denigrate workers. Many of these factory jobs
are far more interesting than many service jobs . "Will you have fries
with that ?" is not going to do anything to help the trade imbalance
or build a career.
I don't know the current wage of a Ford/GM/Xler worker, but it is
similar to US wages when you consider that there is no health insurance
to pay for. Finally, workers want to work. Put a "help wanted" ad in
the paper anywhere and you will have a line of people two blocks long
in the morning. In fact, if you put a help wanted ad for GM/Ford/Xler
in the paper you would have a line strtching from Flint through Detroit
to the Ambassador Bridge. Sadly, these new jobs are for Canadians only.

Canada may have problems but they are not stupid enough to encourage
factories to leave the country by providing exit grants, removal costs,
and risk insurance for those who leave. I believe the USA is the only
country in the world who does this.

Look here! http://www.w7fg.com/manuals.php?manufacturer=Regency&center=
However that would increase your investment 5.5 times.

If I found the right one, that looks like it only has 10 channels.
Depending on where you live you won't be able to hear enough emergeny
(police/fire/ambulance) to make any sense of it.

About 6 months ago I bought a Radio Shack Pro 2006 400 channel scanner and
can only hear the main channels because it does not trunk. There must be
at least 20 main channels they use in my area. I found those channels on
the radio reference website that dxace posted.

What you could probably hear easily are hams using repeaters. Fewer
channels and they don't jump from channel to channel during a single
conversation. I found these by just scanning ranges of frequencies then
googling the frequency with the name of my city and state. You will find
the websites of local clubs who own and operate the repeaters.

Kevin

I also remember those fine days and have about 1 hour of recordings
from that by-gone era that I would be willing to burn on a cd. It has
everything from W4NTI going nuts to NR5T, FZ, and a bit where someone
tells "brother John" how much he loves God. It will bring tears to
your eyes.

I have heard from a usually reliable source (he usually pays for my coffee) that new computers, television sets, cellphones and cable boxes are fitted with audio devices that can listen to what is said in the area and transmit the audio to a monitoring center. Certainly the Onstar has this potential and so do cellphones. The source says that there is a little subassembly on the mainboard as they have not yet integrated the listening device in the mainboard of a computer. Supposedly you can disconnect this device to ensure privacy. It is supposedly required by Homeland security so they can listen in to terrorists etc, but it responds to key words a la Eschalon to determine public trends. All my equipment is too old to have such a thing and I wonder if anyone has heard of this or is it just an urban myth. I think my 8-track is safe. My first reaction is to think that the audio would be too muffled and echoed to be of much use. I know that someone (I think Sony) has developed a picture tube that will produce a picture and transmit the room image at the same time. There can only be one purpose for this device.

I liked the part about the old tinkerer too. My guess, based on some information at Strongsignals, is that these date from the mid- to late-80s.

http://www.strongsignals.net/access/content/model.html

Coverage is 30-50, 144-174, and 440-512 MHz. Unfortunately, that may be a problem Around here (northern Virginia) most of the public service (emergency) transmissions are in the 800-900 MHz range. Maybe, however, they are not in that range where you are. If I had that scanner, I could still hear the Virginia State Police as well as Arlington County VA fire calls at 154.30 MHz. I could hear trains, NOAA weather stations, 2 meter hams, 6 meter hams, and some other things.

So where are you?

I am sure you are trying to help but I must have picked up some of
DXass'es thought processes and am unable to get your drift. What I am
trying to elicit from DXass (alleged college graduate (probably Kay
Kyser's College of Musical Knowledge))is WHY he hates Canada and
Canadians. He seems to be shifting his ground to dumb-ass Canadians but
this doesn't change the argument Some causes for this hatred could be a
real or imagined injury (he says no),.some resentment over a fine or
criminal charge (he says no), or if there is no reason, some
deep-seated personality disturbance that shows itself as a generalized
hate probably based on low self-esteem or even self-loathing. Sadly,
all my efforts to help have been rebuffed. Given this background,
could you elaborate on your post so that I or even DXass can get the
idea....73.....

You haven't mentioned "early toilet training". k35454.

>
>
Does it even program?

If it's old enough, the only way to change frequency is to buy new
crystals.

IN the beginning, there were "public service band" receivers, which
were tuneable. Often these were just a band on a portable radio, but
there were some dedicated home and mobile units. Often they weren't
that great, rather broad selectivity and of course the variable tuning
meant one couldn't switch between frequencies fast or easily, and they'd
not stay on frequency.

SOme of those had besides the variable tuning a socket so you could
plug in a crystal to get one crystal controlled channel.

As the sixties turned into the seventies, better receivers came along.
The drift was towards crystal controlled, and you'd need a crystal for
each frequency you wanted to receive. Since the frequencies in use
varied from location to location, you'd get the empty unit and then
have to spend more money on crystals.

What seems now as a brief time later, scanning was added. Electronic
circuitry that would take the place of the channel selector. It would
cycle through the channels until the squelch opened (indicating a
transmission on that frequency) and the cycling would stop. When the
transmission ended, there would be a delay (in case the other side
transmitted, or in case the transmitter came on again) of ten seconds
or so, and then the cycling would begin again. THis worked well,
since most of those frequencies saw limited use in any given time period,
so the scanning meant you could check the ten or whatever frequencies
almost continuously.

But ICs came along, allowing for practical synthesis, and likely people
didn't like the limited number of channels (or the six bucks or so
they needed to spend on each crystal). So the move was to receivers
that had synthesized tuning, in effect giving crystal control but
on each and every channel in the band. Accurate and stable tuning,
but every channel (like in the old days of variable tuning). And
hence the scanning got better, since one likely wouldn't want to

bother with scanning all frequencies (because they weren't all being used).

Now, if the thing only has ten channels as one message suggested, that suggests a crystal controlled scanner. The only way to "program" those is to buy new crystals for the frequencies you want to receive. You'll have to uncover the equation for getting the right frequency, and then order crystals from a crystal manufacturer. Likely now that will cost you a fair amount to fill all the slots.

Michael

Here are Toad's own words from rec.radio.amateur.misc, posted 9/2/06:

"Not according to people who had accually heard the station. I have a number of people locally and as far away as Maryland, New York, and other locations that heard the station and has email me and written me and says ti's doing just fine. the stations far away say there is no signal but the audio is really good."

If there is no signal how can they hear it? Toad has yet to explain that one.

By the way, Markie, what makes you think this is my first appearance?

Dance, Markie, DANCE!

It's not at all unusual, especially with SSB signals, to have a signal so
low it doesn't register on an S meter, and yet be perfectly clean and
copiable.

I posted the second link as it offers more information about the
circumvence of the loop, and the possibility about making the loop
multiple turns, and how the distance between those tunrs affect the
range the loops works best for. Those are all info not present in the
first.

> The drawback with the tuned loop is you have to tune it along with the
> radio complicating the operation of tuning in a station.

I have it in the livingroom becuase of that, haha. It's indeed a bit
less practical. The overall bandwidth thats tuned into is about 100Khz.
So its doable to browse the 60 meter band for example.

> Looking at the first link I think the design would work better if there
> was more separation between the pickup loop and the tuned loop. I would
> attach the pickup loop on the other side of the PVC pipe.

Hmm that is interesting, and something I want to experiemnt with. In
the testing phase, with simply holding an antenna of a portable close
to the loop, I found that the closer, the better...

> The second suggestion is to use a series 50 ohm resistor from the coax
> center conductor to the pickup loop. This may not do much other than

using the coupling loop is to make the input into the antenna 50 ohm.
Why would adding a 50 ohm resistor improve things further?

Thanks for your help, learning so much about antenna's doing all this
building, experiementing and asking around! :)

The pickup loop will look like a short on the end of the coax at some
frequencies and the resistor will cause the impedance to be a minimum of
50 ohms.

You don't want the two loops to actually touch each other and mounting the pickup on the other side of the PVC pipe is an easy way to accomplish that.

I have the best luck on the first 3. Normally 3.860 and 7.185 are evening/night frequencies but they can work during the day so check them. Just remember, they are not always on the air, it depends on if a volunteer is available to operate the station. They do a great job.

873. Philips D2999 versions

Hi,

I came across a Philips D2999 recently. A bit of research turned up some good remarks about it, but also said that there are two versions. The initial release, apparently, had significant problems and Philips took the model off sale and revamped it.
Does anyone know how to tell the original, poorer, version from the newer one?

John

If I recall John the older version had a letter A before the serial number,
all other revamped models did not have this.

Source record: 91052

George H. Diller
Kennedy Space Center
March 24, 1996
KSC Release No. 51-97 (Note 1)

Space Shuttle air-to-ground communication is transmitted on one of two designated S-band frequencies. Because the S-Band voice is digitized, it is unintelligible.

When the orbiter is above the horizon, air-to-ground voice on the UHF band can be heard either on 259.7 mhz or 296.8 mhz. However these frequencies are primarily used only during launch and landing. It will, of course, be necessary to know if and when the Space Shuttle will be above the horizon at your location.

Unless you are near a NASA tracking station, you will hear only the "downlink," or one side of the conversation, which will be the astronauts talking to ground controllers.

On some missions, the Space Shuttle's orbital inclination is 28.45 degrees, meaning the orbiter travels no farther north in the U.S. than the latitude of Cape Canaveral, the Canary Islands in the Atlantic Ocean region or Midway Island in the Pacific, which limits geographical voice coverage. However, flights which rendezvous with the Russian Mir Space Station and many scientific Space Shuttle missions have higher inclinations, ranging between 39 degrees and 57 degrees. At these inclinations, voice may be heard as far north as the Gulf of Alaska, Hudson Bay in Canada, and the Hebrides in Scotland.

During all Space Shuttle flights, air-to-ground voice (both uplink and downlink) and video from the orbiter are transmitted on NASA Television which is a C-band satellite transmission on GE-2, Transponder 9C, (3880.0 mhz). This is a geostationary satellite with an orbital location of 85 degrees West. Audio only is also available on 6.8 mhz. GE-2 can be received in all 50 states and much of Canada, Mexico and the Caribbean. While the Space Shuttle is in orbit, this system is always broadcasting. The signal is not encoded, or scrambled, and may be picked up with a home satellite receiver. Some cable television companies carry it, at least on a limited basis.

The Space Shuttle on-orbit communications through the Tracking and Data Relay Satellite (TDRS) system uses S-band and K-band. This is encoded and also transmitted digitally, so it is not possible for a home satellite system to receive air-to-ground voice or television from TDRS.

The Amateur Radio Club at the Goddard Space Flight Center in Greenbelt, Maryland, WA3NAN, retransmits the air-to-ground Space Shuttle communications on shortwave frequencies. The best reception on each frequency will vary based on the time of day. The frequencies are:

3.860 mhz
7.185 mhz
14.295 mhz
21.395 mhz
28.650 mhz

Some amateur radio organizations retransmit NASA Television or mission audio. As an example, an amateur radio FM transmitter, located on Merritt Island near Gate 2 at the Kennedy Space Center, retransmits Space Shuttle air-to-ground communications on 146.94 mhz. Mission Audio is also transmitted by the amateur radio club at the Goddard Space Flight Center on frequency 147.45 mhz, and by the club at the Johnson Space Center in Houston on 146.64 mhz. The signals can be received for about 25 miles. An amateur television transmitter (ATV) in Cocoa, Fla., retransmits NASA Television on 421.25 mhz. This can be received with a normal cable-ready television set on Channel 57 by using an external antenna. The signal can be received for at least 20 miles.

Transmitters of various power on other frequencies are provided by local amateur radio organizations in cities around the country. A list of amateur retransmissions of audio or video/audio from NASA TV is available on the Worldwide Web at http://shuttleaudio.info (Note 3).

Some Space Shuttle missions also carry amateur radio transmitters called SAREX (Shuttle Amateur Radio Experiment). As the schedule permits, amateur radio operators can have their call sign confirmed directly by an astronaut. When the flight crew is busy, a "computer packet module" will automatically transmit a computer message. For further information on the SAREX program frequencies, contact the American Radio Relay League, 225 Main Street, Newington, CT 06111, (860) 594-0200.

A SAREX Worldwide Web Page from the NASA Goddard Space Flight Center may be found at http://www.arrl.org/ARISS

You obviously don't know anything about surveillance. I suggest you look up "echalon" on google. You will get about 22,000 hits. Read some and be aware that this old system pales beside what they can do now. It is based on the recognition of key words and enabled by awesome computer power.
Paranoia can be useful if they are really out to get you. Ha ha hehhe hoho.

I heard Cape Radio talking to Lucky Star on 10780 a few minutes ago.
They agreed to use 4992 for future comms, but I've since heard nothing
on 4992. I'll probably keep switching back and forth between 10780 and
4992.

Yes, but why not allow them to touch eachother? What's the reason for
it?

Just hoping to get a (physics) reason for why they shouldnt be too
close togheter, jst to further udnerstand the nature of the thing
better :) I havent came acros any descriptions that said they shouldnt
be too close, so I'm really curious.

Thanks,

Jeroen

You're in luck. It is a programmable scanner. Google "regency Z10
scanner" and you will find lots of information including owner's
manuals.

889. Bitten again by IBOC

Newsgroup: rec.radio.shortwave
Date: 2006-09-09 14:04:31 UTC
From: Ron Hardin <rhhardin@mindspring.com>

I recorded Limbaugh yesterday, thinking to play it back later.

I forgot WTVN 610 Columbus OH was running IBOC, and so there's a
huge hiss and rumble on the entire recording, from interaction
with the receiver's sync detection (Sony 2010).

You not only get the favored rain-barrel acoustics, but there's
a great clatter in the background throughout.

This is the _designed_ result, not some interference with some other
noise source.

You can't use a sync detector on an IBOC AM station unless you get
both sidebands. The digital carriers are 180 degrees out of phase so
that they cancel each other out in a regular receiver.

People are able to hear the audio, regardless if there is a
signal.....nice try.....i've sent out a lot of qsl cards from people
who have comfirmed they heard it by listing all the songs they heard.

897. The Path to 9/11: Neo-Libs...' war on the First Amendment

Newsgroup: rec.radio.shortwave
Date: 2006-09-09 15:23:33 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12g6i3vhpaj8p52@corp.supernews.com>
Source record: 91215

The Path to 9/11: Neo-Libs...' war on the First Amendment

"The attacks by former president Bill Clinton, former Clinton Administration officials and Democratic US senators on Cyrus Nowrasteh's ABC mini-series "The Path to 9/11" are easily the gravest and most brazen and damaging governmental attacks on the civil liberties of ordinary Americans since 9/11.

"When government officials mount such threats against a private media company as to cause it to censor its own product, the First Amendment rights of all Americans are abridged. All historical accounts of complex forces are interpretative and therefore open to charges by the disgruntled that they are false. As someone who has seen the original cut of the film, I can attest that it distributes its criticism for lack of preparedness prior to 9/11 fairly evenly between the Clinton and Bush administrations taking into account that Clinton had eight years to botch his responses to terrorism and Bush about seven months -- when you take into account the delay in getting the new administration into place thanks to Al Gore's reckless calls for a recount in Florida -- which he did knowing full well the kind of danger the country was in from Al-Qaeda, something not mentioned in the film. Also not mentioned was the Al Gore task force which rejected airport security measures that would have prevented 9/11 -- after the government learned that Al-Qaeda was planning to use commercial airliners as bombs.

"The film lionizes Richard Clarke, the rabid anti-Bush terrorism expert who sacrificed his country's security for partisan agendas and a personal vendetta. The film rightly holds the Bush Administration responsible for taking the hero Clarke off the terrorist case, without mentioning why Clarke deserved to be taken off the case. So the viewer is left in the dark about Clarke's character defects while the Bush administration appears not sufficiently concerned about Americans' security. Condi Rice comes in for criticism equal to that of Sandy Berger (which is a true injustice) when the famous August memo appears against a five hour backdrop showing how imminent an attack on the United States was. No qualification is made acknowledging that no one could have known for sure in August that an attack like 9/11 -- unprecedented after all -- was imminent. Sandy Berger and Madeleine Albright who let bin Laden go, more than once, are given the opportunity to explain themselves and give their arguments for getting themselves off the hook.

"Keep in mind that the same people who are outraged by this balanced, carefully researched and enormously informative film which presents itself as a "docudrama" rushed to the opening of Michael Moore's mendacious propaganda film "Fahrenheit 9/11" which labeled itself a "documentary." The controversy over "The Path to 9/11" is one more effort by Democrats to prevent the American public from knowing how their botched, half-hearted

attempts to fight terror over an eight-year period prepared the way for 9/11. The fact that they are demonizing and slandering a honest, scrupulous and talented filmmaker in the process is just part of their ongoing witch-hunt against those who disagree with them.

Awww now girls and girls,,,, Why do y'all www.yall.com keep on
with all that bickering back and forth with each other of y'all girls?
y'all girls just know y'all girls are in love with each other,,,, now
isn't that the tooth? (truth) y'all girls kiss and hug and make up with
each other now.

UPI; ATHENS, ALABAMA:

Last night, as most of us slept, local police conducted a massive sting operation targeted at the city's prostitutes. Several officers from the Athens Police Department watched and waited as prostitutes walked up and down the streets of downtown, leaning in car after car, only to be arrested after driving away in the car and a transaction had clearly been made. The head of the Athens Task Force reported at least 12 arrests of prostitutes and several dozen potential customers. Nobody was hurt in the operation.

However, back at the station, Police were surprised to find in one case that they had arrested a transvestite prostitute. Police identified Lloyd Austin Davies as a known transvestite in the Athens area, but failed to identify the sicko during the arrest. It wasn't until hours later when Davies stood up in the holding tank and urinated through the bars when police were able to identify the Davies as a transvestite.

After posting bail, Davies, a respected member of the gay community, is now registered as a known sex offender in Athens. When asked by reporters if Davies' customers were ever surprised, he replied, "My customers are mostly breast men."
Davies then squeezed his man-boobs through his filthy tee shirt.

Sat. Sep. 9 2006 12:01 PM ET
CTV.ca News

Space shuttle Atlantis finally blasted off this morning on a mission to the International Space Station after weeks of frustrating delays from weather and technical problems.

The six-astronaut crew, including Canadian Steve MacLean, lifted off at 11:15 a.m. ET from its seaside launch pad at the Kennedy Space Center in Cape Canaveral, Fla.,

On the ground, NASA officials kept close watch on images from cameras zoomed in on the shuttle. They were looking for any signs of hard foam breaking off its external fuel tank -- the problem that doomed shuttle Columbia -- as it streaked into space.

NASA declared the crew safe after a preliminary review showed no signs of major foam loss before Atlantis separated from its external fuel tank.

NASA spokesman Kyle Herring said fuel cells that had forced launch delays earlier this week were working as expected.

Officials gave the go-ahead early in the day to fuel up Atlantis and get it ready for launch after there were no signs of problems from a fuel sensor that had also been acting up.

The primary goal of the mission is to install a $372-million US solar power module on the $100-billion space station.

Ahead of liftoff, flashing a broad grin and giving a double thumbs up, MacLean, 51, boarded the shuttle as the clock counted down.

NASA engineers overnight drained and re-filled Atlantis' external fuel tanks without the sensor exhibiting any problems.

This was the last chance in weeks for Atlantis to lift into space because a Russian Soyuz capsule is slated for liftoff September 18 on a flight to the ISS. If Saturday's window has passed, the launch would have had to wait until October.

Atlantis is scheduled to deliver an addition to the ISS, for which MacLean -- a laser physicist known to the crew as "the professor" -- will play a significant role.
"He's going to do a couple of things that are rare and there will be at least one first," said CTV's Tom Walters on Saturday morning, reporting from Cape Canaveral, Fla.

"He'll be the second Canadian to walk in space; and he will be the first Canadian to operate the Canadarm2 aboard the space station. That's going to be a very significant part of this mission because the purpose of this mission -- it's a construction flight -- is to take up a big truss and solar panel assembly.
"That's going to expand the space station and give it a lot more power-generating capacity. And Steve MacLean's role will be to manoeuvre this assembly."
In fact, MacLean will have to manoeuvre it to within a three-inch tolerance for the buckling clamps on the ISS to take hold of the school-bus sized assembly.
"So a Canadian astronaut and Canadian technology playing an important role in the expansion of the international space station," said Walters.
NASA wants the work finished before the Russian mission arrives at the station at the end of this month.

The first day for the Atlantis crew will be dedicated to getting into orbit. On the second and third days the shuttle will rendezvous and dock with the ISS.
"But there are some steps to go through before they dock with the international space station," said Walters.

"Since the Columbia disaster, there's a new protocol in place where one of the things the shuttle has to do, and Shuttle Commander Brent Jett will fly through this tricky manoeuvre called the RPM -- and that stands for rendezvous pitch manoeuvre."

During the manoeuvre, the shuttle does a 360 degree back flip below the ISS, and astronauts aboard the space station will photograph all of the heat shielding to try to determine whether any damage was done during takeoff.

In the case of Columbia three years ago, it was damage to the heat shield that left the spacecraft vulnerable upon landing and resulted in the shuttle breaking apart while returning to Earth.

Thursday's launch was delayed by an electrical short in a fuel cell. ASA managers decided Thursday night that it was operating within safe limits and announced plans for a Friday morning launch. It's one of three aboard the shuttle, which can operate with only two.
Former Canadian astronaut Marc Garneau, head of the Canadian Space Agency, told CTV Newsnet that the sensors are "a complicated, technical piece of equipment."

"These are sensors that are very critical. They tell you that you're out of fuel, in this case it's liquid hydrogen," Garneau said. "The potential for catastrophe is fairly high if you don't turn off the engine when you're out of fuel."

The sensors are engine cutoff sensors, or ECO-sensors, that act as fuel gauges and regulate the firing of the main engines during takeoff. If a sensor shuts off too early, the shuttle doesn't make it into orbit. If it shuts off too late and allows the tank to run dry, an engine could rupture.

The launch of Discovery was delayed by almost two months earlier this year when one of the sensors was discovered to be faulty. All four were replaced on Discovery at the time. A similar problem delayed a launch of the Discovery in July 2005. The problem was never fully resolved.

MacLean and the other five members of the Atlantis crew had suited up to fly Friday when it was scrubbed at the last minute.

Friday morning, the ground crew had pumped the last of 50,000 gallons of liquid hydrogen and liquid oxygen into the shuttle tanks in preparation for takeoff.
The shuttle is to deliver a 16,000-kilogram, $372 million addition to the half-built space station during an 11-day mission. Four astronauts will take three spacewalks to resume construction on the orbiting lab, the first work in more than three years after Columbia broke apart while returning to Earth.

This mission to deliver two girders crucial to the space stations' continued expansion must be done before the final 14 shuttle flights.

The Russians plan to launch a Soyuz capsule on Sept. 18 ferrying two new station crewmembers and the space station's first female tourist, Dallas-area entrepreneur Anousheh Ansari.

Officials with both space agencies wanted to avoid the shuttle and Soyuz meeting at the station, fearing a traffic jam.

Atlantis' mission will be the first since late 2002 to expand the space station. The last two flights were tests evaluating a redesign of the external fuel tank, whose falling foam was blamed for the Columbia accident.

Hmm, I have a Phillips 2999PLL and checked the number (its on a sticker
in the battery compartment in the back, not?). It does not have an A
before the number.

I'm not aware of any problems with it, but if anyone could tell me what
they were, I might be able to confirm...

I'm very happy with my receiver, been using it since 1990.

Wheeling, WV. (AP)

In what has been described as a case for the record books, doctors at Wheeling
Hospital surgically removed a missing Alabama man from the rectum of a well-known local wacko this past weekend.

Dave Heil an obnoxious local eccentric presented himself to the hospital emergency room on Saturday,
complaining of abdominal discomfort and extreme constipation. After performing
a CAT scan, physicians were flabbergasted when the images showed a full-grown
250 lb adult male lodged completely within Heil's lower colon.

Heil revealed that the intestinal blockage was none other than Lloyd Davies, reported as missing from Athens, Alabama last week after failing to
show up for work at Papa John's Pizza.

Mr. Heil, who formerly was an flunky State Dept. employee to a third world country and married to a finnish call girl, had a long term relationship with Davies who is a known homosexual.

He revealed that Mr. Davies, who has been a long-time friend and lover of Heil, made a special trip to Cameron, West Virginia to cheer up his mentor by engaging in a protracted session of ass-kissing.

According to Heil, the analingus got somewhat out of hand. Mr. Davies apparently performed his duties with such enthusiasm that he was sucked bodily
into Heil's lower intestinal tract by the involuntary muscular contractions associated with orgasm.

Neither Davies nor Heil appear to have suffered any permanent injury from
this unusual incident. Doctors successfully removed Davies using copious
quantities of canola oil, and with the assistance of plumbers from a local
septic tank cleaning service.

Davies, who explained that he is quite used to eating excrement, evidently
found more than enough nourishment to survive his 3-day stint in Heil's rectal cavity.

After a thorough hosing-off, Davies was put on an Greyhound bus back to Athens, Alabama.

.....
.....
Hee Haw. The good ol' boys are settin' around the porch at Ranch USA
figurin' out new names to call people. They don't do much anymore
because their jobs have disappeared, their pensions are being cut,
their money is being devalued and inflation is hitting them hard but by
cracky, they can still call people names. Why here comes big Mike from
his part-time job at WalMart.
"Paul Krugman?" he hollers, reaching for a brewski," I ain't ever
heard of him."
"He's a writer fellow," says Black Bart, reaching for a pig.
" Well I ain't got but one book and when I finish coloring it, I'll
look for this here Krugman."
"Dont bother," says Black Bart, "He's a left wing hack. Come and set a
spell."
"Ah cain't," says Mikey, " I laughed my ass off and it hurts."
Big Dave says, "Have you read any of his stuff, Bart?"
"Hell no, Why would I want to read his stuff ?" he replied, " I can
call him names right off the bat and look at the time I save."
"That's true," the others agree and all join together in a chorus of
"Don't worry, Be happee." Yee Haw

In the faint chance that you might actually read the writer you are
bad-mouthing here is the website. Be warned: there are a few ideas in
the article.

Context of '(6:30 a.m.)'
This page shows all events that either reference, or are referenced by, the event '(6:30 a.m.)'.

(6:30 a.m.): NORAD on Alert for Emergency Exercises Lieutenant Colonel Dawne Deskins and other day shift employees at NEADS start their workday. NORAD is conducting a week-long, large-scale exercise called Vigilant Guardian. [Newhouse News Service, 1/25/2002] Deskins is regional mission crew chief for the Vigilant Guardian exercise. [ABC News, 9/11/2002] Vigilant Guardian is described as ï¿½an exercise that would pose an imaginary crisis to North American Air Defense outposts nationwideï¿½; as a ï¿½simulated air warï¿½; and as ï¿½an air defense exercise simulating an attack on the United States.ï¿½ According to the 9/11 Commission, it ï¿½postulated a bomber attack from the former Soviet Union.ï¿½ [Newhouse News Service, 1/25/2002; Filson, 2004, pp. 55 and 122; 9/11 Commission, 7/24/2004, pp. 458] Vigilant Guardian is described as being held annually, and is one of NORADï¿½s four major annual exercises. [GlobalSecurity (.org), 4/14/2002; Filson, 2004, pp. 41; Arkin, 2005, pp. 545] However, another report says it takes place semi-annually. [Aviation Week and Space Technology, 6/3/2002] Accounts by participants vary on whether 9/11 was the second, third, or fourth day of the exercise. [Newhouse News Service, 1/25/2002; Ottawa Citizen, 9/11/2002; Code One Magazine, 1/2002] Vigilant Guardian is a command post exercise (CPX), and in at least some previous years was conducted in conjunction with Stratcomï¿½s Global Guardian exercise and a US Space Command exercise called Apollo Guardian. [US Congress, n.d.; GlobalSecurity (.org), 4/14/2002; Arkin, 2005, pp. 545] All of NORAD is participating in Vigilant Guardian on 9/11. [Aviation Week and Space Technology, 6/3/2002] At NEADS, most of the dozen or so staff on the operations floor have no idea what the exercise is going to entail and are ready for anything. [Utica Observer-Dispatch, 8/5/2004] NORAD is also running a real-world operation named Operation Northern Vigilance. NORAD is thus fully staffed and alert, and senior officers are manning stations throughout the US. The entire chain of command is in place and ready when the first hijacking is reported. An article later says, ï¿½In retrospect, the exercise would prove to be a serendipitous enabler of a rapid military response to terrorist attacks on September 11.ï¿½ [Aviation Week and Space Technology, 6/3/2002; Bergen Record, 12/5/2003] Colonel Robert Marr, in charge of NEADS, says, ï¿½We had the fighters with a little more gas on board. A few more weapons on board.ï¿½ [ABC News, 9/11/2002] However, Deskins and other NORAD officials later are initially confused about whether the 9/11 attacks are real or part of the exercise. There is a National Reconnaissance Office exercise planned to occur as well (see 9:00

a.m.), involving a scenario of an airplane as a flying weapon. [Associated Press, 8/21/2002; United Press International, 8/22/2002]
Entity Tags: Robert Marr, Vigilant Guardian, Northeast Air Defense Sector, Dawne Deskins, Operation Northern Vigilance, North American Aerospace Defense Command
9:00 a.m.: 9/11-Styled Simulation Cancelled An ï¿½emergency response exerciseï¿½ is scheduled to take place at 9 a.m. the morning of 9/11, involving the simulated crash of a small corporate jet plane into a government building. The exercise is to be conducted by the National Reconnaissance Office (NRO) in Chantilly, Virginiaï¿½just four miles from Washington Dulles International Airport, from where Flight 77 took off, and 24 miles from the Pentagon. The NRO draws its personnel from the CIA and the military, and operates many of the nationï¿½s spy satellites. John Fulton, chief of the NROï¿½s strategic war gaming office, and his team at the CIA, are in charge of the exercise. It is to involve the jet experiencing mechanical problems then crashing into one of the four towers at the NRO. In order to simulate the damage from the crash, some stairwells and exits are to be closed off, forcing NRO employees to find other ways to evacuate the building. However, according to an agency spokesman, ï¿½as soon as the real world events began, we cancelled the exercise.ï¿½ After the attacks, most of the agencyï¿½s 3,000 staff are supposedly sent home. [National Law Enforcement and Security Institute, 8/4/2002; National Law Enforcement and Security Institute, 8/6/2002 ; Associated Press, 8/21/2002; United Press International, 8/22/2002]
Entity Tags: John Fulton, Central Intelligence Agency, National Reconnaissance Office
After 9:03 a.m.: NORAD Training Exercise Cancelled NORAD Commander Larry Arnold later says that after Flight 175 hits the South Tower, ï¿½I thought it might be prudent to pull out of the exercise [presumably Vigilant Guardian (see (6:30 a.m.))], which we did.ï¿½ He says: ï¿½As we pulled out of the exercise we were getting calls about United Flight 93 and we were worried about that.ï¿½ Some early accounts say the military receives notification of the possible hijacking of Flight 93 at around 9:16 a.m. [CNN, 9/17/2001; 9/11 Commission, 5/23/2003] However, the 9/11 Commission later claims that the military first receives a call about Flight 93 at 10:07 a.m. [9/11 Commission, 6/17/2004] Larry Arnold adds, ï¿½Then we had another call from Boston Center about a possible hijacking, but that turned out to be the airplane that had already hit the South Tower but we didnï¿½t know that at the time.ï¿½ [Filson, 2004, pp. 59]
Entity Tags: North American Aerospace Defense Command, Larry Arnold
9:28 a.m.: NORAD Possibly Holding ï¿½Live-Flyï¿½ Training Exercise According to former counterterrorism ï¿½tsarï¿½ Richard Clarke, around this time the acting Chairman of the Joint Chiefs of Staff Richard Myers tells him via video link: ï¿½We are in the middle of Vigilant Warrior, a NORAD exercise, but ... Otis [Air National Guard Base] has launched two birds toward New York.ï¿½ [Clarke, 2004, pp. 5] However, no other references have been found to this exercise, ï¿½Vigilant Warrior.ï¿½ Considering that exercise terms are ï¿½normally an unclassified

nickname,ï¿½ [Chairman of the Joint Chiefs of Staff, 4/23/1998] this is perhaps a little odd. Could Richard Clarke have mistakenly been referring to the Vigilant Guardian exercise (see (6:30 a.m.)), which is taking place on 9/11? According to a later news report though, NORAD confirms that ï¿½it was running two mock drills on Sept. 11 at various radar sites and Command Centers in the United States and Canada,ï¿½ one of these being Vigilant Guardian. [New Jersey Star-Ledger, 12/5/2003] If this is correct then there must be another NORAD exercise on 9/11. If not ï¿½Vigilant Warrior,ï¿½ a possibility is that the exercise referred to by Richard Clarke is in fact ï¿½Amalgam Warrior,ï¿½ which is a NORAD-sponsored, large-scale, live-fly air defense and air intercept field training exercise. Amalgam Warrior usually involves two or more NORAD regions and is held twice yearly, in the spring for the West Coast and in the autumn for the East Coast. [Airman, 1996; GlobalSecurity (.org), 4/14/2002; US Congress, n.d.; Arkin, 2005, pp. 254] Is it possible that in 2001 the East Coast Amalgam Warrior is being held earlier than usual (like Global Guardian (see 8:30 a.m.)) and is taking place on 9/11? In support of this possibility is a 1997 Defense Department report that describes the Stratcom exercise Global Guardian, saying it ï¿½links with other exercise activities sponsored by the Chairman, Joint Chiefs of Staff, and the Unified Commands.ï¿½ The exercises it links with are Crown Vigilance (an Air Combat Command exercise), Apollo Guardian (a US Space Command exercise), andï¿½significantlyï¿½the NORAD exercises Vigilant Guardian and Amalgam Warrior. [US Department of Defense, 5/1997; GlobalSecurity (.org), 10/10/2002] Since in 2001, Vigilant Guardian (see (6:30 a.m.)) is occurring the same time as Global Guardian, might Amalgam Warrior be as well? In his book Code Names, William Arkin says that Amalgam Warrior is ï¿½sometimes combined with Global Guardian.ï¿½ [Arkin, 2005, pp. 254] Amalgam Warrior tests such activities as tracking, surveillance, air interception, employing rules of engagement, attack assessment, electronic warfare, and counter-cruise-missile operations. A previous Amalgam Warrior in 1996 involved such situations as tracking unknown aircraft that had incorrectly filed their flight plans or wandered off course, in-flight emergencies, terrorist aircraft attacks, and large-scale bomber strike missions. Amalgam Warrior 98-1 was NORADï¿½s largest ever exercise and involved six B-1B bombers being deployed to Eielson Air Force Base, Alaska, to act as an enemy threat by infiltrating the aerial borders of North America. [Airman, 1996; GlobalSecurity (.org), 4/14/2002; Arkin, 2005, pp. 254] Another Amalgam Warrior in fall 2000 similarly involved four B-1 bombers acting as enemy forces trying to invade Alaska, with NORAD going from tracking the unknown aircraft to sending up ï¿½alertï¿½ F-15s in response. [Eielson News Service, 10/27/2000; Associated Press, 10/29/2000] If either one (or both) of these exercises ending with the name ï¿½Warriorï¿½ is taking place on 9/11, this could be very significant, because the word ï¿½Warriorï¿½ indicates that the exercise is a Joint Chiefs of Staff-approved, Commander in Chief, NORAD-sponsored field training exercise. [North American Aerospace Defense Command, 8/25/1989] Real planes would be pretending to be

threats to the US and real fighters would be deployed to defend
against them.

This site shows how intense the competition is between states to get a parts or assembly plant. I would point out that the Japanese are not satisfied with worker perfomance in the Nissan factory (read Krugman's article) and are planning new factories elsewhere. Also, the new investments planned in Ontario are greater than the combined total of seven states mentioned. in the Southern Auto Corrider.

John,
I live only one mile from the ocean here in South Florida and am not able to really get any good BCB DX! I have never been able to receive any European BCB stations or any stations west of the Mississippi River. I am in Hobe Sound, FL. I read that you can receive BCB stations even living under the shadow of mts! Could you please give me some tips? I have two radios that I use primarily for BCB: DX-440 and RF-2200. I also have two restored old boatanchors a Hallicrafters S-38 and a Lafayette HE-10. Both give pretty good BCB DX. You may reply in the newsgroup or at:
sctvguy1-at-adelphia-dot-net(email munged of course)

> be too close, so I'm really curious.

Two things referring to the link <http://www.kr1st.com/swlloop.htm>

1. The tuned loop and pickup loop are supposed to couple magnetically.
The tuned loop is bare copper and it looks like the pickup is made of
bare wire so if they touch they will have a direct circuit connection.
If you use magnet wire for the pickup you are counting on a thin layer
of enamel paint to insulate one from the other, which can easily be
abraded.

2. One parameter controlling Magnetic coupling between the loops is
distance. You already know this and the loop will tune a little sharper
if the pickup loop does not load it as much as when the loops are
physically together.

This is a bunch on nonsense. Ask yourself why the government would want
to spy on everyone. There is no reason to do so even if it were possible.

Terroristï¿½s organizations are todayï¿½s guerrillas where the people that
make up these groups are spread out throughout the world and so they
have to use everyday communications channels to develop their nefarious
plans. These are the communications the government is interested in
intercepting not spying on your boring life. The government activity is
intercepting communications in transit not planting bugs in peopleï¿½s
houses. There is no need to plant bugs in electronic devices as the
government has access to the communications infrastructure.

If you have the need to worry about something worry about the NYT that
sees itï¿½s duty as going about reveling the governments efforts to use
the Intel gathered against the terrorists. The liberals that run the NYT
are a real threat to the USAï¿½s efforts to use this Intel against the
terrorists. If I were president, I would find a way to put those people
in jail for a long time at hard labor filling sand bags in Iraq.

Again?

Yet *ANOTHER* off topic post by that sanctimonious hypocrite Telamon????

Why don't you <plonk> yourself? You've certainly earned it!

Hey, you're in luck.

"Ohio Scanner Frequency"
http://www.qsl.net/kb8ssh/scanner.html

"Scanning Central Ohio"
http://www.qsl.net/wa8pyr/index.html

Well, of course it has moved. Try
http://www.wa8pyr.net/

and
http://www.wa8pyr.net/scanning.htm

For example
http://www.wa8pyr.net/publicsafety.htm

at which point you have your choice of counties.

Democrats have to rewrite history, because they can't make history, and if they ever get control of the Government again, the United States our founding fathers envisioned will be history.

I can hear Todd's 13.556 pirate station nearly fifteen hours a day, and I
can tell you all the titles of the songs he plays and all the names of the
shitty bands that are singing them.

It's going to be hilarious when they slap the fine on his ass, and then he
normally comes back here and starts attacking people over it. ROFL, I
can't wait.

986. DXpedition loggings - Conrad Meadows, Okanogan-Wenatchee National Forest, WA

Newsgroup: rec.radio.shortwave
Date: 2006-09-09 22:28:50 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <38adnez-V7sG3Z7YnZ2dnUVZ_oidnZ2d@comcast.com>
Source record: 91211

For the first time in many years, I traveled inland within Washington rather than to a coastal site for a DXpedition. My intent was to concentrate on tropical band DXing for a change, as trans-Pacific MW DX is the primary target from the WA coast DXpedition locations such as Grayland and Ocean City State Park.

Conrad Meadows is a beautiful spot in the Mt. Rainier area, and is the starting point for hikers and packhorse trips heading into the Goat Rocks Wilderness. I set up camp in a nearby "dispersed camping" area, where you are free to set up camp in whatever spot looks inviting. I picked a location a short stone's throw from the South Fork of the Tieton River, and between two conveniently-placed pine trees (for antennas).

The area is green and lush during the spring, but this part of the state is bone-dry at the moment...still, it's a pleasant location to camp next to the burbling waters, string up some antennas, and DX completely free from local noise or interference sources. The photos on this individual's blog show what Conrad Meadows looks like in the month of May: http://www.moderndogweblog.com/photos/conrad_meadows/conradmeadowsfromabove.html

This was the 3rd DXpedition I've used the PA0RDT Mini-Whip antenna, and it was great to find that it always equalled, and usually exceeded, my Wellbrook ALA 100. The Mini-Whip clearly performs best in a noise-free location and mounted as high as possible. At the campsite I was able to raise the Mini-Whip to a 40-foot level in the branches of a Ponderosa pine; the ALA 100 antenna was erected similarly, with the flat-top portion of an inverted delta loop also at 40 feet. Total loop circumference was 100 feet; probably overkill but the loop was still a fine performer.

Please see my latest blog entry for photos of the antennas and the Eton E1 setup during the trip to Conrad Meadows: www.sdr-1000.blogspot.com and further details on the performance of the antennas.

AUSTRALIA 2310, 1115-1120, VL8A Alice Springs Sep 3 English announcer with music and talk about John Denver. Very good signal parallel to 2325 VL8T Tennant Creek; 2485 VL8K Katherine not heard, but noted the following night 9/4 with a good signal parallel to the other two 120mb Aussie outlets. (Atkins-WA)

BRAZIL 4885, 0218-0223, R. Clube do Para Sep 4 Male announcers with lively talk in Portuguese and lots of reverb effects. Advertisement at 0220; ID as 'R. Clube' 0221, with mentions of Para at 0222. Excellent signal. (Atkins-WA)

BRAZIL 4915, 0224-0232, R. Anhanguera Sep 4 Portuguese talk by male announcer to 0230 Brazilian jazz vocals. Possible ID sung in Portuguese at 0234. Good level. (Atkins-WA)

BRAZIL 4985, 0236-0240, R. Brasil Central Sep 4 Faint signal of male talk, but definitely Portuguese. Very tentative. (Atkins-WA)

COSTA RICA 3350, 0316-0320, R. Exterior de Espana Sep 4 Male and female announcer in Spanish with telephone program. Very good signal; presumed. (Atkins-WA)

ECUADOR 3280, 0258-0302, LV del Napo Sep 4 Devotional program or prayer reading by man and woman in Spanish. Possible mentions of Napo at 0300. Poor to fair signal; tentative log. (Atkins-WA)

GUATEMALA 4780, 1215-1219, R. Cultural Coatan Sep 3 Male announcer noted in Spanish, followed by campesino folk music. Good signal, and also heard 9/4 at 0205 with mentions of Coatan. (Atkins-WA)

GUATEMALA 4800, 0208-0216, R. Buenas Nuevas Sep 4 Female announcer in Spanish, followed by instrumental Latin music. Nice ID by woman at 0212. Good level. (Atkins-WA)

HONDURAS 4819, 1133-1136, LV Evangelica Sep 4 Male preacher in Spanish with sermon. Fair to good level. (Atkins-WA)

INDONESIA 3345, 1044-1048, RRI Ternate Sep 4 Man and woman in Indonesian language, with mentions of Indonesia. Indo pop music 1047. Fair signal, and no sign of Radio Northern on the frequency. (Atkins-WA)

INDONESIA 3976, 1106-1109, RRI Pontianak Sep 4 Female speaker in Indonesian with ID, brief jazz music, and into talk by soft-spoken male announcer. Very good signal. (Atkins-WA)

INDONESIA 4605, 1121-1131, RRI Serui Sep 4 Fantastic signal with soft Indo pops 1121-1129, followed by male announcer in Indonesian with time check and RRI Serui ID at 1130. (Atkins-WA)

INDONESIA 4750, 1207-1208, RRI Makassar Sep 3 At tune-in, a female announcer in Indonesian was heard, with a number of mentions of Indonesia. Quite strong signal, but struggling with badly distorted audio, as is often the case with Makassar. On 9/4, their audio was much better when heard at 1135. (Atkins-WA)

INDONESIA 4790, 1220-1223, RRI Fak Fak Sep 3 Male and female speakers in Indonesian, and Indo pop music; patriotic-sounding public service announcement or advertisement at 1223. Good level. (Atkins-WA)

INDONESIA 4870, 1225-1227, RRI Wamena Sep 3 Male announcer in Indonesian; content appeared to be brief news items from around the country. Presumed. (Atkins-WA)

JAPAN 3925, 1208-1212, R. Nikkei Sep 3 Excellent S9+10 dB signal with English lesson, using world news items as examples, given by male and female announcers in Japanese. Heard throughout the weekend at pounding levels, often with jazz music selections. (Atkins-WA)

NEW ZEALAND 3935, 1103-1106, ZLXA Levin Sep 4 Faint signal of male announcer with slow reading, possibly news items. Ham radio QRM at times. Tentative;

it's been a long time since I've had a definite logging of ZLXA. (Atkins-WA)

NORTH KOREA 2850, 1138-1140, KCBS Pyongyang Sep 3 Korean female vocals with orchestral accompaniment; strong signal. (Atkins-WA)

NORTH KOREA 3250, 1145-1147, Pyongyang BC Sep 3 Male announcer in Korean, with heavy-handed orchestral music. Good signal. (Atkins-WA)

NORTH KOREA 4450, 1112-1120, KCBS Sep 4 Passionate political-sounding speech in Korean by male, followed by dramatic vocals and orchestral music at 1117. Good level, and clearly parallel with 4557 (Haeju). 4450 was accompanied by a warbler jammer, but 4557 was in the clear. Likely KCBS on these frequencies, rather than the Anti-Imperialist National Democratic Front, as it's been reported elsewhere that the clandestines are not using these transmitters currently. (Atkins-WA)

PAPUA NEW GUINEA 3260, 1147-1150, R. Madang Sep 3 Old-time Gospel music selection at tune-in; male announcer in Pidgin with time check 'Come up long seven o'clock' at 1149. PSA or advertisement at 1150. Good level. (Atkins-WA)

PAPUA NEW GUINEA 3275, 1151-1152, R. Southern Highlands Sep 3 Male announcer in Pidgin, possibly with a sermon. Poor to fair signal, but heard at good level on 9/4 with ID at 1140. (Atkins-WA)

PAPUA NEW GUINEA 3315, 1154-1200, R. Manus Sep 3 PNG pop music tune, followed by male announcer with news items in English at 1200 re-check of frequency; mentions of Papua New Guinea. Fair level. (Atkins-WA)

PAPUA NEW GUINEA 3345, 1157-1200, R. Northern Sep 3 Female vocals in possible Pidgin language. Music style sounded like typical PNG Melanesian folk music, but signal was poor-fair. No break at top of hour. Tentative. (Atkins-WA)

PAPUA NEW GUINEA 3365, 1202-1203, R. Milne Bay Sep 3 Male announcer with talk or news in English and mentions of Papua New Guinea. Into R&B pop music at 1203. Good signal. (Atkins-WA)

PAPUA NEW GUINEA 3385, 1203-1204, R. East New Britain Sep 3 Good to very good signal of contemporary Christian music, heard on a good night for PNG reception. Presumed. (Atkins-WA)

PAPUA NEW GUINEA 4890, 1228-1230, NBC Port Moresby Sep 3 Excellent, clear signal of reggae music, and male announcer in English at 1230, mentioning Karai Network. (Atkins-WA)

PAPUA NEW GUINEA 4960, 1234-1235, Catholic Radio Network Sep 3 Very faint signal of English talk by a female announcer; it seemed to be a religious devotion or prayer. Tentative. (Atkins-WA)

PAPUA NEW GUINEA 7120, 1230-1233, R. Wantok Light Sep 3 It was great to hear this station loud and clear again; probably the best reception I've heard since logging their multi-hour inaugural day celebration broadcast in June, 2005. Noted female announcer with ID, ad into contemporary Christian music.

Despite Wantok's 'NVIS' antenna, designed to restrict radiated power to the region, their signal clearly reaches far past Papua New Guinea!. (Atkins-WA)

PERU 3235, 1020-1035, R. Luz Y Sonido Sep 4 Male announcer in Spanish, and campesino music to 1030 ID. Into sermon or religious talk at 1031. Fair. (Atkins-WA)

PERU 4790, 0203-0205, R. Atlantida Sep 4 Male talk in Spanish, and into what sounded like a live, outdoor political speech. Fair level; presumed. (Atkins-WA)

PERU 4835.4, 1138-1143, R. Maranon Sep 4 Male announcer in Spanish language, with occasional mentions of Cajamarca. Weak signal. (Atkins-WA)

RUSSIA 279, 1123-1135, R. Rossi Sep 3 Likely R. Rossi from Sakhalin Island here, the only LW frequency noted in audio, with Russian talk and EZL music. Announcements and possible ID at 1130. Fair to good signal, and MUCH better on PA0RDT Mini-whip antenna than the Wellbrook ALA 100 loop!. (Atkins-WA)

SOLOMON ISLANDS 5020, 0958-1003, SIBC Sep 4 A very good signal tonight from one of my personal favorites--SIBC Honiara. Female announcer in English with 'nine o'clock' time check at 1000, SIBC ID, usual bamboo pipes interval signal, and into news items. At later re-tune, I caught the sign-off at 1159 with ID, announcements, and national anthem. Immediately after the anthem, SIBC began their BBC relay. (Atkins-WA)

SOUTH AFRICA 3320, 0305-0314, R. Sonder Grense Sep 4 Pop music in Dutch or Afrikaans at 0305; male & female talk in Afrikaans at 0308; Simon and Garfunkel's 'Mrs. Robinson' at 0313. Good signal. (Atkins-WA)

SOUTH AFRICA 3355, 0321-0323, BBC Meyerton Sep 4 Talk by man and woman in English, with political commentary on UK affairs. Poor to fair signal, peaking sharply at 0322. (Atkins-WA)

SWAZILAND 4775, 0359-0400, Trans World Radio Sep 3 Announcer noted in English with mention of upcoming German language program, and ID 'You are listening to TWR, broadcasting from Manzini, Swaziland.' Into German program 0400. Good signal. (Atkins-WA)

VANUATU 3945, 1003-1007, R. Vanuatu Sep 4 Very weak signal of possible news items, read by a man in English. Tentative. (Atkins-WA)

<http://www.pkarchive.org/column/072505.html>

It looks like this link may violate copyright law. The NYT sells these
articles although I do not see this particular one listed on the NYT
select site. Maybe this one is free.

The problem is many people no longer respect the NYT in which the
article appeared. Most of the writers of that paper are of a liberal
bent and the liberals have been on the losing side in the arena of ideas
since, well since always so you can understand the reluctance to waste
ones time reading more crap.

The nicest thing I can say about Krugman's logic is that it is flawed
and he comes to the wrong conclusions. This is just another example of a
hate America piece of wrong-headed writing in the worst newspaper ever
printed in the USA. The article is just awful and their is no excuse for
the conclusions he came to since the reasons Toyota is moving its
operations are right in the article but his "liberal view" will not
allow him to draw the right conclusions from his own research such as it
is.

So now that a look at the article for what it is, a collection of facts
to which he speculates on the reasons for Toyota's move of plant

operations from the USA to Canada and since he drew the wrong conclusions from those facts he then manufactures reasons why this event has come about. What a mess of an opinion piece.

Ask yourself why Krugman did not just pick up a phone and call a Toyota executive asking him the reasons for the move instead of creating a speculative hate America hit piece.

This article is a good example of poor reporting, logic, and reasoning leading to wrong conclusions and opinion. This is just what I would expect from Americaï¿½s worst newspaper.

I'm surprised you don't have any China domestic in there as they are all
over the band with some transmitters at 100Kw.

You sure heard a lot of stations from different parts of the world for
this time of the year. Next time I have insomnia in the early hours of
the morning I'll have to try some of these stations.

You got the one Japanese domestic I usually get on 3925 listed in
Passport as 10/50 Kw. Like you found that one can come in big time. I
only have passive antennas and on that band I use a 50 foot shielded
loop.

> cuhulin

Man you really really need to chill out. Layoff the Mad Dog and
give the Ripple a rest.

When the New Madrid cuts loose the next time it will be, to say the
least,
an interesting event. I have read translated accounts of what the fine
folk
in New Orleans experienced during the last go round. Many thought it
was
a visitation from Heaven for the evil that was rampent in the Big Easy.

It caused several hundred acres here in Lexington KY to drop about 50'.
Cracked mason chimineys in Boston. Yea it will wake your little dog
up big time. Likey toss or bounce you out bed. I suspect you could
mosey on over the the university and ask and they will almost certainly

have records from the last big one.

Anything that can make the mississippi run backwards for 12 hours,
or so, will almost certainly have some effect on everything downstream.
Given the depth of soil and lack of bed rock I am willing to bet many
people will be rather shocked when their houses, stores, roads and
bridges become "unusable".

On the bright side, it will knock most of the power grid down which
will
knock most of the MW (AM BCB) off the air, giving those of us with
decent
standby power a chance to do some serious DXing. I only hope that if
it happen s in my lifetime, it is after thundrstorm season.

In Californica they are at least aware of the problem and have tried
to address it by requiring tougher/better building codes and
reinforcements
for most other structures. Here in KY and the rest area most likely to
be effected very little has been done.

If, no make that when, it cuts loose it will be very interesting. This and
related conversations are daily topics over in misc.survivialism. If people
think Katrina was bad just wait until St Loius and other damged metro
areas crash and burn.

Years ago I bailed from Civil Defense as it was becoming FEMA when
it became all too clear that no government was going to be able to do
much to assist a large damaged area. Sad but true.

If you choose to live below sea level you damn well had better be able to
swim. Live in an area frequented by forrest fires then a log cabin might
not be a good idea. Live in a known earthquake zone, you have really
ought to build your home to surivive the expected event, carry insurance
and be able to feed and take care of yourself, your family and any friends
you really care about for a long time.

I am from the government and I am here to help really means
bend over here it comes.

Mark Morgan was dissapointed in this thread, because his reading
problem caused him to see "or just his fine ass" in the subject line,
and he got all excited for no reason at all.

Better luck next time, Marky.

Message-ID: <dZSdnehjRcXY6Z7YnZ2dnUVZ_vednZ2d@comcast.com>
Source record: 91235

None of those receivers that you own are very good for this type of DX. They are ok for local (on this continent) type of reception, but they don't have the selectivity required for the "splits" that you would like to hear.
The S-38 in nothing more than an "all american five" receiver, meaning that there is no RF amplifier ahead of the mixer.
The HE-10 appears to use this same topology.
You could connect a long wire antenna to either of your portable receivers, but their dynamic range is limited, meaning that if your antenna has too much capture area the strong signals will cause many intermodulation products to occur.
Suggestions? The Palstar R-30, Yaesu FRG-100, Icom R75, Drake SW-8, Icom R70, or Icom R71 would all be good choices for the under 500 dollar used market. Other good receivers would be the Drake R8 series, JRC NRD-515 and NRD-525, Collins R-388 and R-390 receivers, and many others. Forgetting about the "bells and whistles" that these receivers have, the main thing that I am referring to is the added "horsepower" that comes with these receivers in the form of overall gain, IMD performance, and selectivity.
Good luck on your quest!

Pete

I phoned them in regards to dxAss. They referred me to the Holland,
Michigan Sanitation Department but to no avail....The Ass has to wait
until next March 24th. to be picked up, along with all the other dead wood.

I've been listening to those lately on XM. Especially the old comedy shows like Jack Benny, Burns and Allen and even Red Skelton. Skelton's hilarious. If he forgets lines he just ad libs. I think he was the Robin Williams of my parents generation.

I also like the old westerns line the Lone Ranger and even Hopalong Cassidy. It's interesting listening to the Gunsmoke radio shows. I grew up watching James Arness play Matt Dillon on the TV series but on the radio shows it was Robert Conrad playing that role.

Unlikely. The lunatic fringe is busy derailing their nefarious plots.

==========
Dominion theologians believe that that this verse commands Christians to
bring all societies, around the world, under the rule of the Word of God.

http://www.religioustolerance.org/reconstr.htm
==========

==========
Christian Reconstruction.

A recently articulated philosophy which argues that it is the moral
obligation of Christians to recapture every institution for Jesus
Christ. It proclaims "the crown rights of King Jesus." The means by
which this task might be accomplished--a few CR's are not convinced that
it can be--is biblical law. This is the "tool of dominion." We have been
assigned a dominion covenant--a God-given assignment to men to conquer
in His name (Gen 1:23; 9:1-7). The founders of the movement have
combined four basic Christian beliefs into one overarching system: 1)
biblical law, 2) optimistic eschatology, 3) predestination (providence),
and 4) presuppositional apologetics (philosophical defense of the faith).

http://www.serve.com/thibodep/cr/rc.htm

==========

They also like slavery. Heck, it's in the BIBLE!

==========
The bible permits slavery. This statement will come as a shock to most
people. The laws in the Bible concerning slavery have very seldom been
studied, much less preached upon. But the biblical laws concerning
slavery are among the most beneficent in all the Bible....

Genesis 1:23 speaks only of the fifth day. Genesis 9:1-7 speaks of man
having dominion over the beasts of the earth, and the vegetation. Also of
the penatly for murder. Nothing there about conquest of man. Also, none of
this would be in Jesus' name, since Jesus had never even been mentioned,
even in the remotest context of future events.

Their reasoning is that unless Christ had specifically stricken down a
particular Mosaic Law, it still stood and therefore had Jesus' full
consent and approval.

==========
Its most common form, Dominionism, represents one of the most extreme
forms of Fundamentalist Christianity thought. Its followers, called
Dominionists, are attempting to peacefully convert the laws of United
States so that they match those of the Hebrew Scriptures.

All religious organizations, congregations etc. other than strictly
Fundamentalist Christianity would be suppressed. Nonconforming
Evangelical, main line and liberal Christian religious institutions
would no longer be allowed to hold services, organize, proselytize, etc.
Society would revert to the laws and punishments of the Hebrew Scriptures.

Actually, I hear so many Chinese stations on the tropical bands that I consider them "pests", and I rarely log or report them. Also, certain other geographic areas interest me more for DX and the music that is broadcast from places like the South Pacific and Africa, so I tend to concentrate my DXing on those stations from the parts of the world. However, when it comes to medium wave DXing I seek out the Chinese stations as much as any other. They are not as common for me on medium wave as the Japanese or Korean stations.

Peanuts are just crap for shipping. The items float through peanuts. If you put them in zip lock bags and then pack around the item, they suck less. Bubble wrap is really the way to go.

UPS would never pay off on that unit. Insurance is no excuse for poor packing.

Once again, thanks for exposing Radio-Mart(TM) to be the asshole that he is.

I don't know about you but I get most interference from the Chinese on
49, 41, and 31 meters. I might see more interference from them on the
tropical bands if I had a bigger passive or active antenna.

I think Pete advised you well - certainly a decent receiver helps a lot. You must also have a decent antenna, something that will overload your portables as Pete states. You don't mention what type of antenna you are using?

Hobe Sound looks like an ideal site for good Trans Atlantic DX. There is an effect noted as "sea gain" coastal effect, whereby the MW signals on the seaside/beach are greatly enhanced compared with a DX site several miles inland. That is why all your top American DXer's head for the coast to spots like Newfoundland, MA and Grayland in WA. So, you are one mile from the ocean and therefore your prospects must be very good.

DXing here in South Africa is much easier than in N. America, as we have only a few local MW stations therefore our long distance signals are not blocked. You on the other hand have thousands of local domestic MW stations to block your TA DX, but your American MW DXer's have shown that with good directional antenna's that can block the locals, decent reception on a regular basis of TA signals is possible.

I would suggest a directional antenna in your suburban location like the Wellbrook ALA1530 might bring in good results, and then you should think of upgrading your RX as well along the lines that Pete suggested.

Lastly, don't underrate perseverance, patience, skill and experience. The really exotic DX doesn't come in every night, so you have to be alert to a good opening and then DX for all you are worth.

You might do a Google and have a look at the sort of stations Mark Connelly is picking up from his seaside spots in MA.

Good luck and have fun!

Do you really need to post 30 times a day with nothing useful to say related to shortwave ? this is a shortwave radio group and last month you posted 893 times. there might have been one post that has anything to do with the real focus of this group (as opposed to what some people keep forcing it into) isn't there a more appropriate group to post to ?

> or simply being a canadian.
> ....
> Thanks for the measured response. Canadians are very different in some ways than Americans, but since both countries have similar language (pardon my French), institutions, and businesses, a superficial view is that they are the same. Not so. I have lived in the States and have some insight as to the differences. On the geopolitical level, the US is an empire with interests and troops all over the world, while Canada is a small country that has no imperial ambitions. As a small country, the government is more responsive to the people while in the US the imperial presidency pretty well does what it wants in spite of public opinion. For example, when Brian Mulroney took Canada into NAFTA against public opinion, his government was defeated and the Conservatives went from a majority of 150 + to 2. and the Liberals were returned.to power. In the US, "there isn't a dime's worth of difference" between the two parties.
Surveys have consistently shown Canada to be far more Liberal than the US with social attitudes being similar to Europe.For example, Paul Krugman's article on Toyota moving to Canada would seem quite reasonable to Canadians while it makes Americans go bug-eyed, froth at the mouth, and shout insults. I don't think socialized medicine would work in the States. There are too many crooks, cheats, thieves, fiddlers, in the population that would loot the system and bring it to its knees. Of course there are crooks in Canada too, but they don't overwhelm the system. It is amusing how many Americans are touting the virtues of private medicine as they get on busses to get cheap prescription drugs in Canada.
I have good friends in the States and had a good time there but I never felt comfortable and was glad to return to Canada where I do feel

comfortable. Canadian patriotism is not of the flag-waving
demonstrative kind but is much quieter, and strangers could assume it
didn't exist. Mulroney found out the hard way. Anti-Americanism in
Canada is quite strong and based on the foreign adventures of the US
government, not on any particular dislike of individuals. Canada seems
to be one of the few places that US citizens can come for a vacation
and not feel threatened.

The Cordell Press, Inc.
presents
Memoir of a Radio God
By Glenn A. Baxter, P.E.., K1MAN

Chapter 1
A "Star" is Born?
or
Aren't We All "Stars?"
or
The Happiest Day of My Life

It was the happiest day of my life. It was also the scariest. I remember the day well.* I had won the "lottery." I became a brand new human baby. It was 5:42 A.M. on March 9, 1942. I was eager to get this new show on the road. I was all tangled up in the darn umbilical cord, but that didn't seem to bother me at all. I couldn't breath when I came out of my groggy mom. That DID bother me! I was blue. I was ugly. My ears were flapped over. The doctor struggled and got me untangled. They hustled my mother away as they frantically struggled to save my precious little life. All life is precious! It was touch and go for quite a while.

Meanwhile my Mom, Marion Watson Baxter, from Swan Quarter, North Carolina, was hustled out of the delivery room at St. Agnes Hospital in White Plains, New York.

"Where is my son," she demanded in her 'drunken' stooper?

She had been drugged pretty hard to make my arrival and complications as painless as possible.

"Oh, we are cleaning him up," a nurse replied.

My mom was a Registered Nurse (with almost no time yet as a practicing nurse).

"Oh don't be ridiculous" she slurred through the pain killing drugs!"

Back in the delivery room, I seemed to be OK. No brain damage, I speculate, just a few loose screws, as anyone who knows me will agree.

"Boy, that was close!" I thought as I cried up a storm.

Finally, after what seemed forever, the Irish nurse brought me in to see my mom. My mother acted as though she had just had a couple of Manhattans. What did I know?

When she first held me tenderly (I liked that) she cried and said:

"How will I ever learn to love him? He is so ugly!"

Now THAT is ugly! I thought:

"Hey mom, you ain't seen 'nothin' yet! I will nestle into your heart and be a joy unto your life! And a pain in the you know where! I 'got' plans!"**

Mom fed me and then it was time to go out with the rest of the kids in that awful room. What a noise they all made.

"What a bunch of babies," I thought!

Then my dad came to the window. Another Irish nurse picked me up. She pointed to me, and then to him, and mouthed:

"He looks just like you!"

My dad grinned and gave her the "monkey sign." You know, he thumbed his nose. She was quite indignant and stamped her foot.

"Hey, I like this spunky lady," I thought, "Already I have people sticking up for me. And that guy, my dad, great sense of humor! Look at him. Dirty old man (he was 50)! He loves me already! I think I am going to like it around here!"

My dad died when I was 16. He was making love to my mom. He had just served her breakfast in bed, as was his usual routine. He had just told her that she had been the best wife he could possibly have. He said he didn't think he would ever get any closer to heaven than he was at that moment. It was a beautiful morning (August 31, 1958), only ten feet from the water on Great Pond in Belgrade Lakes, Maine. I was in the next room, sound asleep. My older sister Carol was in her bedroom sound asleep. My oldest sister Betty and her husband, George Sternad, and their kids, Shelley and Kenny, were in the Guest House, all sound asleep.

I was awakened when I heard George on the phone out in the living room:

"Hello Dr. Adams? This is George Sternad. Mr. Baxter died about fifteen minutes ago."

Remember the scene in the movie Dr. Chivago when Yuri watches as they start to throw dirt on his mother's coffin? That is exactly how I felt. KaBam! I slipped out the lake front screen door of my room and went out to the shop, a separate building. I needed to think. I needed to be alone for a few minutes. George came into the shop and put his hand on my shoulder. He said:

"You are the man of the family now." I Started to cry.

My mom was a basket case. Dr. Adams and his wife Frieda came over. They were neighbors. I had palled around with their Tom boy daughter Nancy and her best friend Ann (who I was in love with) for years. I thought the Adams' showing up like that was pretty classy. They all came over for dinner later that evening. My sister was to be off to Northwestern as a freshman, and I was to be off to Vermont Academy as a Junior. Things had settled down a bit as we all faced our lives ahead without Frank H. Baxter. He was a good man, a good father, a good husband, and he was my best friend. He pushed me fairly hard. I pushed back somewhat. I knew what was good for me, though. I needed to be pushed; I believe all kids need to be pushed. Carol, my older sister feels this was cruel. Not so! My dad gave us both plenty of "wiggle room," however. When he died, my mom became my best friend. When she died, my wife Bonnie became my best friend.

He took the whole summer off, starting when I was 9, and we worked on projects together. I would run around and get tools for him, and we had a ball. He loved me, and I loved him.

My first year at Vermont Academy started out as a disaster. I was an academic derelict. I was a scholastic "street person." I began to come alive the Spring of my freshman year, however. If I made honors in my sophomore year, my dad agreed to buy me a new $695 Collins 75A-4 amateur radio receiver. That was the Rolls Royce of radios, and in 1958, $695 was a lot of money. I missed honors, but not by all that much.

Was I spoiled? Yes. Was I lucky? Yes! Am I dysfunctional? Yes! One time I went to a shrink. He, then, had to go to a shrink. I was sent BOTH bills! Life can be so unfair! Am I crazy? No!

Ask any one of my teachers. They will tell you! Ask any one of my employers. Ask my angel and loving wife Bonnie. Ask Walter Cronkite, the most trusted American. He knows me well. They will all tell you the same thing. Glenn Baxter is a piece of work. I suspect that all of us are a piece of work, only I freely admit it! I have some great friends and some bitter (and very powerful) enemies. I am trying to love my enemies. I hereby forgive them all for any nasty things they may have done. I wish to be forgiven for the nasty things I have done. I am truly sorry.

Every human being (even dogs and cats) are products of their genes and their environments. Being loved and wanted makes a big difference. All things make a big difference.

For example. My dad feels romantic on 9 June 1941 (nine months before I was born). Pearl Harbor has not happened yet. My mom is agreeable to some romance. Maybe it was her idea. No, it probably WAS her idea. OK. All set to go. Glenn Baxter, K1MAN, is about to get his big chance. BUT! The phone rings. Wrong number. Glenn Baxter doesn't happen. K1MAN get assigned to someone else! His

brother or sister get to be the next and last child in the Frank and Marion Baxter family, not even a ham!. Chance. Roll of the dice. Dr. Albert Einstein (my middle name is Albert, after Dr. Einstein) says that God doesn't play with dice. I disagree. One wrong number, and I would not be here. 14.275, 3.890, and 3.975 would be the same old stuff on amateur radio. No "illegal"(1) broadcasting, etc., etc.

Think about yourself. Suppose it was the sperm right next to you and not your sperm. Would it be YOU here reading this? No. At best, it would be your sister or brother. You would not exist. You would never exist. You had one chance and only one chance AND you made it.

Think about it like this. 111,000 thousand fans in Michigan stadium, "The Big House." One thin dime dropped out of a plane at 40,000 feet lands in the stadium the night before the big game. Who finds the dime? It was you, lucky you!

Whenever I see a new baby at the super market or somewhere else, I usually lean down and say:

"Well, how do you like life so far?

The mom usually says something like:

"Well he (or she) likes it just fine!"

Life is really precious, from the smallest spider (or even smaller) to the largest whale.

The bible says

"I call heaven and earth to witness against you this day that I have given you a choice; life or death. The blessing or the curse. Therefore choose life, so thou mayest LIVE, thou and thy seed."

I chose life. It was scary. It still is scary.

Choosing life, without hesitation, I decided that it was time to get on with it. I was on my way to becoming a "star," at least for a few brief moments. Every dog has his day, and I was destined to have mine.

"Now, how do I try and charm Carol, my youngest sister? My oldest sister is away at college; she will be putty in my tiny hands. But Carol? She might not like having competition over there at 31 Claremont Road, Scarsdale, New York. I think I will just play 'dumb' and try the good old 'just be a happy baby' approach. That might, just might, work."

Every day is the happiest day of my life.

* Actually I don't remember anything at all. This account is how I know I would have been thinking and assuming I could think at all at that time. My brain cells were all there, and some of the standard "programming" was working quite well, but it was like a new house with all the wiring in place but no "connections" made yet. The lights were on, but nobody was home, so to speak. I do know that I was loved.

** Actually, I didn't have a clue what I was doing. I was on "auto pilot" and was just going along with the flow. But I was loved, and you could take that to the bank.

(1) There are many Radio Amateurs in the United States and abroad who are of the totally wrong opinion that my daily call-in Amateur Radio Talk program, heard world wide on the short wave frequencies of 3.890 MHz., 3.975 MHz., and 14.275 MHz., 365 days per year since 1987, through July 4, 2005 was "illegal." It was the only short wave radio program of its kind and has never been attempted before or again by anyone.

Calm down, guys. I ask a simple little question of fact and this site
erupts into personal attacks, statements of philosophy, warnings about
sphincter control, and all sorts of wierdness. Is there a full moon?
Posting a question here is like showing an ink blot test: you don't
know what people see in the question. The guy who told me this story
has always been right before; but it sounded far out to me and I just
wanted to see if anyone had heard about such a thing. That's all.
Sheese!

Ah ok. Obviously at least one of the loops is insulated here (that wouldve been a joke ;)). I'll experiment with the distance here and see what differences it makes.

I also noted that different setups can affect different type of stations in different ways again. What can benefit stations hidden in static (tropical dx) can worse reception of SSB stations that are strong, and ofcourse, the other way around.

Fun stuff, making your own antenna for sure!

John,

Thanks for the suggestion. I contacted Radioshack but they do not ship internationally to Australia.

Does anyone know of any other sources of the CX7961A-1 IC.

Regards, SatellitBoy

1055. Radio Polonia

Has a nice signal right now (12:45) on 11850 khz. Unfortunately,
there's a much stronger signal on 11855, but Radio Polonia is still
there...may just require a little digging.

AFN Diego Garcia heard here at 1300 on newly reported 12759 in // with 7811.
Very weak.

12759 has been recently reported and is either a frequeny change from 12579 or
merely a punch up error.

First, it's ECHELON.

BTW, if you look up both ECHELON and CARNIVORE, there's some great
information there.

Second, the On-Star device may, indeed listen in to the interior of
the vehicle. It's not something that's left to the discretion of the
On-Star operator, and requires an instrument of authority to activate,
although, like nearly everything abuses are possible. Activating the
On-Star system, though, does alert the driver that the system is listening.

Third, authority can, indeed listen to cellphones, intercept e-mail,
VoIP conversations, and audio/video chats. That's just the way it is,
today. And there are some trojans that have been released into the wild
that activate webcams and microphones without the users's knowledge or
consent.

That said, there are no daughterboards being installed in CPU's,
television sets, radio that listen to, monitor and rebroadcast your
activities.

Cable boxes, are something different. Cable boxes have, for a very
long time, reported back to the cable company what you watch, when you
watch it, and with the new generation of cable boxes containing DVRs,
they now report what you record, when you play it back; when, if, and
how often you pause and replay live TV, and the content you replay. And

with ratings services now using the so called people meters to ehance accuracy of the surveys, they also can keep track of the number of people in the room during any activity.

But to date, there is no listening device in the cable box.

Though, given the cable company's broad discretion to gather, use and abuse personal information, I'm not going to say that this is to be ruled out entirely.

So, you may upgrade your audio gear, your TV and your entertainment electronics in comfort--step into the 90's, as you will--secure in the knowledge, that, at least for now, you may speak your mind in your own home without fear of repercussion.

But I would be very careful about doing so with someone else in the room. The times, they are a-changing.

Y'all seem to have a great command of the Bible but little to zero knowledge
of the Islam-0-Nazis' Moronic Verses.
Read them some time. The koran is no where near as large as The Bible and
the text is very easy to read. It is meant to be interpreted literally,
unlike The Bible.

I think after reading the moronic verses you will be shocked. Shocked to
learn that YOU are slated for a literal beheading.
But until you do y'all are ignorant infidels.

This is such great advice, especially the part about perserverance.
Propogation conditions are so different at different times (even within
the same hour), that you just have to keep trying and eventually you
will be rewarded on both HF and MW.

I'll expand on that a little. The openings that bring in the really exotic BCB MW DX can be quite short - as little as five or ten minutes.
If you are not on the band EVERY DAY then you are going to miss these great openings (perseverance and persistence).
The best openings are around sunrise and sunset, when reception gets a great peak for a few minutes.
Most times nothing makes it over the high mountains that surround my scenic little town, but perhaps once in a few months the band opens and then it's bingo! You hit paydirt. Be sure to have your recorder in order and running, so later, when the signals have faded, you can go back and see if you have some good ID's and QSL material.

It also is important to KNOW the band and what stations regularly come in, as you want to ignore those and develop an ear for the unusual. Keep tuning the band, but make a note of the promising stations, then come back to them and pick out the clearest. Then you have to hope for a good ID, usually just before or after the top of the hour. Doing that I have got as many as four exotic station ID's around the hour within a few minutes of each other.

But most days lady luck will not be with you and you won't get an ID at all - perhaps propagation drops off at the critical time, or a static crash obliterates the ID, or a local station may come up and drown your exotic underneath. That's DXing - it's like the big fish that got away - you have to lick your wounds and try again another day.

The Circuit is rather easy. The button cells are actually "Supercaps"
They are in the range of 1 to 10 FARADS. , yes Farads.

I first came across these in my patent attorneys office several years
ago, his son had one and it had an incadescent lamp in it and it only
lasted for a few minutes.

I was applying for a patent for a similar flashlight that I built that
has a small wheel on the back. It turned a little PM motor that
generated current when you rolled it on a table or other flat surface.
My invention used super capacitors and a LED, It would stay lit
overnight. I used a simple circuit (3 components) that I called a
charge pump. In my unit you rolled the little wheel back and forth and
it would light up. I wanted to patent it so I could manufacture them in
some small town that industry had left behind in Canada or the US. Just
to help some folks that needed help.

Its a long story, In the end I had no money to convert the patent from
Pat. Pending.

Hope this helps...

Tom

I am not well versed on this model, but when are we going to see shortwave radios that have HD and DRM, as well as USB, firewire , and Bluetooth out plugs?!

It seems shortwave manufacturers are stuck in the nineties and late eighties. Maybe this is why everybody on EBay is clamoring for old Grundig Satalit's!

The sooner DRM dies the better.

The HD radios in the link above are still vaporware. No real
specifications to speak of in the links. Note all the vaporware to date
need AC power. You are not going to be running these radios on batteries.

Telamon wrote:

>
> Confused nut cases, drug abusers

Uh - oh ... have you been reading my mind?

Several things I've noticed about Chuck Harder ...

1) In the last year or so, Harder's speech on the air has been alternately slow and slurred, like he's drunk. He sounds confused, and asks the same questions over and over again. He can't remember basic facts, like names, dates, and the big news events of the past 40 years or so.

2) Harder constantly mentions crack cocaine during his conversations with his guests, even if it's totally out of context. I've known - and do know - folks on meth, Oxy-Contin, and Fenatyl who behave exactly the same way. They condemn crack addicts, sometimes in racial terms, but think it's all right to be strung out on their stuff.

3) Harder continually complains about the tactics of law enforcement, especially the number of people in the U.S. who are in prison; he mentions friends of his who were busted for a couple ounces of pot or a few pills - while rich folks like Rush Limbaugh get away with "doctor shopping."

4) It's interesting that Harder does not take calls from listeners anymore; he hasn't done so for almost two years. Is it possible that he's too "zonked out" for whatever reason to handle the hurly-burly of your average two-way conversation?

5) Re Rush Limbaugh's "doctor shopper" scandal in late 2003: right after that happened, Chuck Harder's affiliate station count plummeted, and by New Year's Day 2005, his network, Liberty Broadcasting, had gone out of business. Is it possible that "For The People" stations knew something weird about Harder and did not want a Limbaugh-style embarrassment - for the same reasons?

6) Harder has always steadfastly condemned drug testing, especially mandatory drug testing; instead of using the libertarian argument about excessive government intrusion, Harder opposes drug testing on a sort of George Orwellian basis. He repeatedly said he would never, never, never submit to a drug test. WHY?

I am not accusing Chuck Harder of anything here; these may all be benign and mean nothing at all. But they are all more than a bit

suspicious, don't you think?
In the words of Fox News Channel (the only TV channel besides VOD movies and the Three Stooges I watch consistently), "we report, you decide." Another quote, from Bruce Willis in "Armaggeddon": "Make the call."
Have fun ...

One more thought ... I realize the gravity of the accusation that Chuck Harder is a drug addict. I am NOT accusing him of being so. For if it came out that Chuck Harder is on drugs, then EVERYTHING he says, and has said, on the radio ... from "I've Got Mine!" to his anti-Bill Clinton behavior to his anti-Dubya rhetoric to - going all the way back to 1990 or so - his harangues against GHWB ... is a gigantic lie, a drug-induced delusion.
It's the same as saying that Pat Buchanan is gay.
Which, of course, is not true. But if it were, Buchanan's political/pundit career would be ruined, and he'd probably be reduced to selling double vodka-tonics and 22-oz. beers at some bar on M Street in Georgetown in D.C.
Such is the very thin reed that the contemporary nationalist platform is built on.

I don't criticize, I speak truth whenever I do post. I am NOT ashamed of myself overall. I have made a few posts I regret but they were usually responses to very offensive posts made at me and made me really mad. I strive to maintain the highest level of honesty and integrity.
I answer to Jesus so my main concern is have I done good. If I criticize someone like radio-mart who is very evil then I do not feel I have done anything but good.

in 2.25 years I have made about 500 posts. he has posted 900 in one month. that is a waste of my time looking at posts he makes in the middle of otherwise good threads

First problem is that it interferes with analog signals on nearby channels.

Second is that instead of a bit of phase shift, deep fades or selective
fading, it is either there or its not. Most program listeners would rather
hear the entire program rather than hear parts of it well.

Hey Stupid,

I got N9OGL's Omega One pirate station at S-4 and can hear every shitty
song Todd is playing with no effort at all, even with the attenuator in.
Excessive power is a violation of the rule.

N9OGL's due process is the full body cavity search they'll give him just
before they throw him in the prison with AB8MQ if he don't pay the NAL
when they slap his ass with it.

It's going to be hilarious, especially when he comes back here and blames
everyone for his mistakes, like he normally does.

If he increases power much more I won't even need an antenna to receive
it. I'll be able to hear it with the rig turned off.

There's only so much you can say about shortwave, and then it has all been
said.

"I heard a station on my shortwave, it was far away."

"Really? Neato, I heard one one on mine too. WOW!"

"How long is your ground rod?"

"10 feet"

"I got the QSL card from France."

"Those assholes QSL?"

"Had to send them ten bucks."

"That must have really cut into radio funds."

"Yah, it did, and plastic radios ain't cheap."

"The wind blow my antenna down, got it back up this morning."

"How do you hook two shortwaves to one antenna?"

"With a splitter"

"Damn, I just cracked the plastic on my Eton"

"Bummer, man, I feel for you."

"It's okay, they have shitty audio anyway."

"One of these days I want to buy a good radio."

"I know what you mean, me too....

I can hear 'em in Austin at 00:26 on 6875, better than usual. And I
don't have to resort to trying to make 'em out by using SSB.

Heard on the infamous FRG7 using a 20M dipole.

Mike Maghakian is no better than RadioMart. He criticizes everybody last month for paying too much money for such and such a radio. He says he is concerned for the people getting ripped off. Yes, he unsuccessfully tries to camoflage his contempt for others on this board with genuine concern. It's not working Mike and we all see through your smokescreen.

Got any Highly Modified Radio Shack receivers for sale for a couple hundred bucks Mike? If you have so much concern for others on this board and in this hobby then why do you find it necessary to sell crap radios for way too much money? You are no better than Radio-Mart - you are a RadioMart Clone.

You need to have some understanding for others on this board. Cuhulin doesn't seem to bother most on this group so just ignore if you don't like. Change the channel. Maybe you and your friends need to start a new group then you can make up rules that you like and ban people that you don't like. Maybe IRC would be good for you or a Yahoo group. Or maybe rec.shortwave.no.Cuhulin might be good for you.

Talking about a waste of time - Stalking Cuhulin around the internet and investigating into just how many posts he made in a specific amount of time. Hmmm. I could find better ways to keep myself occupied.

I'd really love to hang around and chat some more there Mike but I must be on my way. I've got some rejoicing to do with Pastor Peter J. Peters. See Mike, I'm just as holy as you.

I can't make them out to well on 7430 kHz. I'm enjoying the Ramones
marathon. "I wanna be sedated", I think "Pinhead" before that, and one
other one. No one ever plays the Ramones anymore. Its nice.

Can't hear anything on 6875, Here some guy speaking maybe Carribean
French Like maybe Haiti on 7430 with some white english in there too
maybe.

I'm off for some quiet high ground in the truck with the Degen 1103.
Will report back later.

sounds like you just committed all those terrible things you say I do.

it takes about 5 seconds to see his post history when using google groups to read the group.

I sell about 3 of those 394's a year. looks like you are the one doing the stalking.

as long as Jesus knows I have a good heart, people like you can't tell me how "bad" a person I am. cause I am not.

Not only do we worry about these organizations "listening", but your employer is most certainly tracking what you are doing - to the point of firing people -- or making their life a living hell -- if the person happens to look at publilc information websites that contain detrimental information about certain employees. It's happened where I work. And the company for which I am employed now has a "big brother system" that not only blocks the websites the company deems bad -- but also reports who has been to those websites and when and how many times. This includes, where I work, almost all media outlets and publishing houses. Never mind that I am in charge of ordering published materials for the company.

But worse than that is the ability of people in this kind of user group to track who you are and what you stand for. That's come back to bite me twice in groups that I no longer participate in. If the user group can access and negatively use this information -- I shudder to think what the government or other interested parties can do. !!!

This is interesting. How many radios besides the AR7030 have this type
of sideband?

Took a trip up the hill with the W1FE and got 6875 in ok on the
portable rig. No 7430. Way too much noise here in the shack and the
copy is unreadable. I really need a longwire across the river.

1141. Degen DE31 'portable' Shortwave "Active" Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-09-11 01:54:06 UTC
From: pure <pure@videotron.net>
Message-ID: <g6g9g29p0im2ne4t901qthkdcp035ef07t@4ax.com>
Source record: 91316

What a piece of CRAP this antenna turned out to be.......almost the price of the radio itself !!!

This is why it's crap:

1) the reception is WORSE with the antenna, than using the whip antenna on my degen radio, model DE1102 !!! I actually get the signal properly, and can listen to the program with the radio, but then the show disappears completely if Iuse the external DE31 antenna!

2) the batteries AAA inside the antenna, to power it, run down pretty fast. I recharged a pair just before, and they were run down 2 or 3 hours later, when I gave up.

3) it's not clear how the de31 can give a better signal, unless you're in a manhole, in a military bunker, underground and you need to have a connection to the surface 5 m away. This would be the only conceivable use for this antenna.

What a huge waste of money, this de31 !!!

I've heard it. It just sound like a bunch of noise that covers three
channels on a analog receiver but that is not what you meant.

You can go to the DRM consortium web site and hear some recorded
transmissions. Prepare to be underwhelmed.

The main problem it is low bit rate audio so even if you have a good
signal it sucks anyway.

Hi. I use to post on here quite a bit. I am still a huge over of shortwave. And I made a lot of friends on here. But I thought you might like to see what some of my other hobbies are. One of them is no-budget filmmaking. I made a little film short, in the old expressionist/noir style of the past. Check it out. Its suppose to be somewhat surreal, so the story is a bit dream-like/nightmarish. It is very simple - no elaborate special effects. Basically because I couldn't. With no budget. Eitherthing was shot on my old camcorder, and edited on my home computer. So what you think. I kno I hadn't been on here in a while, but I just wanted to say hi to all my firends. I still love shortwave!

Digging through Martyn's sales, I found this buyer:
<http://feedback.ebay.com/ws/eBayISAPI.dll?ViewFeedback&userid=bagger>
The only negative feedback he got in the last year was from
Radio-Mart(TM). Yet Martyn called him:

" Reply by radio-mart: a real nasty one this, the rig is perfect, still
is, One of the Nastiest Buyers"

Buying from Radio-Mart(TM) can be bad for your ebay rating.

Worse then "Big Government", Google may be listening to the TV shows in the background. According to the Kim Komando radio talk show 9/10/06, Google may be listing to the background audio provided you have an open mic, such as a web cam mic, to gather personal data on TV viewing habits. The website is www.komando.com. There is an opinion poll on this issue, but so far I haven't found a detailed link.

>
> What a huge waste of money, this de31 !!!

I had problems with my DE31 until I figured out that the wire between the antenna and the radio was backwards. I had the tuner close to the loop at first, and it basically eliminated the signal. Maybe most people don't make this mistake though.

I use duracell alkaline AAA batteries in my DE31 and they have been there since last winter. They're still working.

Rotate the antenna so that the hole faces the direction of the transmitter. If plugging the antenna in seems to provide poor reception, try clipping it to the whip with the white clip, and clip the black clip to a ground wire.

1182. Selecting new radio

Newsgroup: rec.radio.shortwave
Date: 2006-09-11 06:21:10 UTC
From: Norris Smith <nsmith001@comcast.net>
Message-ID: <gsWdnWvIdKZwYpnYnZ2dnUVZ_oOdnZ2d@comcast.com>
Source record: 91356

I have/had a Sangean ATS 505 for several years. It quit working tonight. I was quite satisfied with its performance, features, and capabilities. The only minor compliant is the readability of the display. Unless viewed straight on, the display is difficult to read and the led back light just adds glare and little help. Can anyone suggest a replacement for this radio (make/models)? I would like something in the $75-200 price range.

There was a site I used to read that discussed receivers, scanners, antennas, etc. They also did technicial tests and reviews of various items. They also had several forums on a number of subjects. Does anyone know of this site and if it is still going?

Thanks, Norris

- when he was returning from one of leading pedophile travel
- destinations, the Dominican Republic.

Another fine example of Liberal Elitist {Long-Pointed-Nose}
Finger-Pointing at 'poor disadvantaged minority groups' like
the Good People of the Dominican Republic.

Plus a clear example of the Liberal Double Standard of what
is an Identified and Documented Medical Condition "ED".

And... Promoting Liberal Lies and Left-Wing Distortions
again, And Again. AND AGAIN !

For One and All,

I have noticed recently that since KCBS 740 kHz AM Radio
out of San Francisco, CA has started IBOC occasionally I
hear "Marble Mouth" Audio for a several seconds once or
twice an Hour. KCBS normally comes in fairly good up here
in Twain Harte, CA about 120 Miles due East of the Station.
KCBS => http://www.kcbs.com/
http://en.wikipedia.org/wiki/KCBS-AM
http://en.wikipedia.org/wiki/KCBS_%28AM%29
http://www.oldradio.com/archives/stations/sf/kcbspix.htm

FWIW - Over the Years I have never heard this type of
"Marble Mouth" Audio Distortion on KCBS prior to IBOC.

Question - Has anyone else hear some new types of
Audio Distortion from AM Radios Stations that are now
Broadcasting using IBOC ?
-and-
What are the specifics as to the Radio Station ID/Freq;
your Location and Distance from the Radio Station ?

Actually it doesn't appear to be missing the insert at all!

Looks like a non stock knob. But, he should know that.

Replacement knobs *are* available, and I doubt the knob being non stock would put off any *true* collector.

1194. Grundig 3400 vs SAT800 (WAS: Question for cuhulin)

Newsgroup: rec.radio.shortwave
Date: 2006-09-11 11:39:20 UTC
From: Unrevealed Source <unrevealed_source@nospam.com>
Message-ID: <jWbNg.285$jR7.263@newsfe02.lga>
Source record: 91369

I tend to agree, Mike. But why not just add him to your Blocked Senders list, like I do?

By the way, one of your recent posts said that the Grundig 3400 is not as good a reciever as the Sat800. I have an 800, but have been interested in picking up a 3400 if I can find one at the right price. It sounds like you've compared the two. Any additional comments on the 3400? I do know that they seem to be somewhat fragile and many of them have broken switches.

Ever had a Grundig 2400? I've been interested in those also and would be interested in any comments.

Nice, but beer is even better. A good Danish, Dutch or German beer. Try a good trappist like Westmalle Dubbel or Chimay Bleu - some of the best Dutch beer.

But you should always show a lot of restraint when it comes to alcohol. Never, ever drink anything stronger than 96% before 9 A.M.

Oh, and them Danish wimmins are hot! No laser thermometer is needed to see that. They are ready and waiting for you, Cuhulin!

http://www.fybush.com/sites/2005/site-051021.html

In 1949, the station (by now using the calls KNBC) replaced one of the old towers with a 550-foot guyed tower, the same one that's still in use 56 years later as the main tower. This is a most interesting tower for several reasons: first, it's unusually short for a class I station on 680... and second, because it's got an insulator about two-thirds of the way up the tower.

Yes, it's a sectionalized tower - and one with a top hat on the upper section, to boot, to give the tower a little more electrical height in lieu of the physical height it couldn't achieve because of the nearby San Francisco International Airport.

>

Well, now that you brought THAT up. Most HR departments have access
to a number of databases that serve up gathered, and collated,
digestible information about employees under their purview, as well as
candidates for employment. These databases include things like education
histories, employment histories, legal troubles, property ownership and
all the usual employee interest. But they also include things like
internet activities, blogging content, USENet posts, groups belonged to.

What really surprised me--and this goes back a few years, to when I
was at CBS--was when a colleague threw a couple of huge parties during
the summer months, and one day got called in for a little private face
time with not only the GM, but an HR rep and a couple of men in suits,
to discuss his significant purchases of alcohol. We all knew he was a
professional drinker, but we were kind of stunned that his place of
employment could present documents about his alcohol purchase history.

In the end, it was a small matter, with some long shadows. Several of
the staff had been at the parties, and had confirmed his assertion that
the booze was for large group entertainment gatherings. But we all
looked over our shoulders after that.

I was dating the HR manager for one of the newspapers at the time,
and she showed me how she could access the databases that the Company
had used to acquire this information. It was all there. Collated
according to credit card purchases, by date, location, content, and

amount...with remarks on some that included things like names engraved on jewelry, and the names of his cats and other such trivia. Even the time of the purchase. All of this information was linked to his Jewel Preferred Club Card.

All you need to do to access these databases, is to subscribe. It's not cheap, but you don't need any particular credentials to subscribe.

This information is being gathered and collated about all of us every day. This is information that the government is precluded by the Constitution from gathering, on its own. However, BUSINESS, is not so encumbered. And once the information is gathered, all it takes is a court order, or a warrant for government to access it. With some companies, as we've read recently, releasing these data upon request, or even volunteering it.

So, the Era of Big Brother is upon us, and has been for a while, now.

The concerns of the OP are valid. Someone IS listening. Not through your television, radio, or cassette player, but through credit cards, webcams and microphones, telephones, e-mail, and as Wal-Mart has demonstrated, even cash transactions.

That someone is listening is alone something to be concerned about. But it's who has access to what is being listened to that has me concerned. Because, unlike some countries where such information is highly protected, there are no such protections here.

And once you're on the grid, your life can be opened for public scrutiny by anyone with a motive. Anyone with a grudge. Anyone.

For most of us, no one will care what we do. For the unlucky, however....

And don't think your life is so boring as to not be attracting attention. It's not what YOU think is important, it's what SOMEONE ELSE thinks is useful that matters.

Vigilance.

Huh? Don't follow your logic. Are you challenging an assertion?
>
> Plus a clear example of the Liberal Double Standard of what
> is an Identified and Documented Medical Condition "ED".

How can a medical condition be a double standard? As for Viagra, it is extremely popular including among people who don't have "ED."

Perhaps Limbaugh has ED, but given the allegations of homosexuality back when he was a liberal, his problems with anal cysts, and his repeated marriages without children or even any evidence of a real romantic relationship, a distinct possibility is that ol Rushbo was traveling to DR for sex with someone other than his wife. DR indeed has a problem with child prostitution.

Was he even traveling with his wife?

You ought to comment on the fact that he was committing crimes by using drugs that weren't prescribed for him.
>

Got a mirror Talibano?

> http://en.wikipedia.org/wiki/Liberalism

America was founded by liberals on liberal principles.

Statesmen will invent cheap lies, putting blame upon the nation that
is attacked, and every man will be glad of those conscience-soothing
falsities, and will diligently study them, and refuse to examine any
refutations of them; and thus he will by and by convince himself that
the war is just, and will thank God for the better sleep he enjoys
after this process of grotesque self-deception.
-- Mark Twain, "Chronicle of Young Satan"

Seems like a switch ought to be able to solve that problem too, right?
Either that, or leave the darned lid off! I find that for my purposes,
I can leave the jumper in one position (I don't use that little whip
antenna that it came with).

The Propaganda Machine of the Neo-Lib... Blog-0-Sphere

I've been amused over the past few days to see how powerful I am and to see how rapidly a fiction can be concocted and travel around the leftwing web, but not actually surprised. The author of this fiction, along with many others is little Max, whose posts begin on his blog but don't end there. Huffington Post, Yahoo News, Indymedia and a rash of others spread each and every fantasy he comes up with. This one goes as follows:

http://www.frontpagemag.com/blog/BlogEntry.asp?ID=719

You have to ask yourself, are the Neo-Lib...s immitating the propaganda methods of Islam-0-fascists or vis-a-versa?

How the Left Undermined National Security Before 9/11

Read it, thrice!

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=24328

"While the nation was having a good laugh at the expense of Florida's hanging chads and butterfly ballots, Mohammed Atta and Marwan al Shehhi were there, in Florida, learning to drive commercial jetliners [and ram them into the World Trade Center towers]. It will take a novelist to paint that broad canvas properly. It will take some deep political thinking to understand how the lackadaisical attitude toward government and the world helped leave the country so unready for the horror that Atta and Shehhi were preparing."

- Michael Oreskes, New York Times, October 21, 2001.

Frank and John remember 911 tonight, and discuss the loss of not only our good friend and former producer Rod Coppolla, but the impact upon the entire nation and why we are at war with Mohamadanist fanatics. Frank and John also interview author Gerald Posner, whose book "Why America Slept" deals with the bungling of governmental agencies during the Clinton Administration that led to 911.

Plus, the N.Y. Times and its continuing front page stories that are predjudiced against the President; the need for a Kurdish homeland and how it relates to Suid Afrika's BoereVolkStaat; your phone calls at 718-761-9996 and more.

Bush dont need a Taliban respondee

Hell he's already on their side!

Imagine a lowlife cocksucker like Bush not giving a shit where Bin Laden is?

Adolph Hitler was a better leader than BUSH! At least Uncle Adolph hunted down his enemies like dogs!

Why the hell is Saddam still alive?.....I mean frigging christ he outta been in that hole they found him in with a half dozen hand grenades dropped in for good measure!

What the fuck is wrong with republicans??? Why do they all of a sudden give a flyin fuck what anyone in the world thinks anymore?.....They are playing along like democraps would when it comes to terrorists because the UN says they gotta treat the sand niggers nice?

I'd ship em all home on one big plane and have the pilot bail out somewhere over the ocean after developing "ENGINE TROUBLE" Then have the US apologize to the world for the accident while trying not to snicker out loud ROFL!

I've been a life long republican but now I'm thinking of giving up voting for good....Your screwed either way you go! I thought these fucking idiots were smarter than what they are.....Now I'm just not so sure! For gods fucking sake people to hell with the world.....Kick ass and take names and nuke some fucking body!

Then you wont have to have the US kissing everyones ass.....Everyone will be afraid to fuck with us or criticize us for fear of getting their ass handed to em on a silver platter!

THATS HOW IT OUTTA BE!

GOD BLESS AMERICA!

I didn't find the reset button but I used a smaller screwdriver and got
the back off and that took care of it.

Now that I know how to get the back off do you know how to do the
chaffing mod. (whatever it is called, so that the audio isn't muted when
tuning.)

1241. Coast to Coast AM desecrates 9-11

Newsgroup: rec.radio.shortwave
Date: 2006-09-11 19:18:16 UTC
From: Lenny <latvia_lenny@yahoo.com>
Message-ID: <ZYWdnTHp6s7rK5jYnZ2dnUVZ_qidnZ2d@rcn.net>
Source record: 91415

George Noory's continued politicization of Coast to Coast AM reaches a new low as he programs not one, not two , but THREE 9-11 conspiracy kooks in one night ON the anniversary of this heinous terrorist act. Not content to let these disgraceful in-it-for-the-money pseudo-academics mouth off during the rest of the year without any rebuttal whatsoever from the numerous intelligent engineers who have debunked their nonsense, Noory disgraces the anniversary and the numerous heroes who gave their lives on 9-11.

Couldn't he stick with remote viewers, alien abductions or even ghosts for another night? Disgusting.

RHF--

I get your point, but, in this instance, I don't think kookiness adequately explains the disgraceful programming for the show on what is essentially a national day of mourning. These 9-11 opportunists get more than their share of time on OTHER days. They should stay in their hole on this day and Noory should get a clue. I'm pissed.

1244. KNBR-680 AM Radio and it's Antenna

December, 2004: the bush administration says "No WMDs".

Fair enough...

September 10, 2006: VP Dick Cheney, on national TV ("Meet the Press"), says: "Iraq had nothing to do with 9/11".

Fair enough...

...but then the question *BEGS* to be asked-- If no WMDs and Iraq had nothing to do with 9/11, then...

WHAT IN THE HELL ARE WE DOING THERE????

Anything we can tell the parents of the 2600 dead American kids?

Anything we can tell the 19,000 wounded American kids?

Anything we can tell the 30,000 innocent dead Iraqi civilians?

Any reason at all that we invaded a sovereign nation, sent it to wrack and ruin?

Anything we can tell the American taxpayers why they spent hundreds of *B*illions of dollars on nothing?

Anyone got an answer? Any one of you rabid bush acolytes care to step up to the plate and venture a reason as to why we are in Iraq--now that they themselves have denied both of their fundamental reasons for starting the war?

(Sorry if your leader (Cheney) and his sock puppet (bush) pulled the rug out from under whatever reason you might offer).

YMMF??

I have KA-31 into my Kaito and it seem to work ok hanging by my bedroom
window. It's about as good as the whip, but easier to manage when I'm
laying in bed. I use it to keep occupied when insomnia strikes.
I intend to take my KA1103 and the loop on the road at the end of the
month. I'll hang the loop up from a tall tree limb at my camp sites.

I often wonder what is inside the loop antenna. Maybe just one loop of
wire with the tuning mechanism in the part that plugs into the radio
along with a mosfet preamp. I can't imagine they are using varactor
diodes to tune such a large frequency range.

Hey pure,
Why dontcha just take the thing apart and do some reverse engineering
and let us know what's inside for parts and how they're wired.

Source record: 91434

What do you mean by viligilance?? Are you recommending that is the
course of action to take??

Well, thanks for the encouraging words. So then, in conclusio, one
just has to be paranoid?? I have friends that work in HR. That, in
and of itself, is scary enough -- but if Wal-Mart is tracking my
purchases, then we are all in trouble. Another interesting point with
all of this: The records of professional organizations one belongs to,
of course, is easily accessed by the public. But what of medical
issues.?? Can those be tracked as well. I suppose if one got a hold
of my master card -- you could pretty well determine any treatments I
was undergoing -- Now for a run of the mill cold -- that's not such a
big deal. But for a disability?? Then your employer can dismiss you.
Of course, they will hide the reason in "reduction in force" and trust
me - the
DRS agrees with me on this one. What about some awful dreaded disease
like aids?? That, too, can then be tracked. But shouldn't there be
some things that are personal and not available to big brother?? We do
after all sign a privacy act document whenever you are treated by a
medical professional. Wonder how that applies to Public Aid? I would
guess all of those records are easily accessable?? I work with a lot
of clients on public aid -- with all sorts of issues. I never actually
thought that through. And I wonder about unemployment. If you file
for that, can employers or others get those records too? Then I wonder
what about charities or churches -- could they access this kind of
background information and then deny you membership?? Gosh, this is
just enough to make me never want to leave my home again -- but then I
would have to rely on charging groceries and other more personal bills
and then we're right back where we started - aren't we. Oh, and what
about books you buy at AMAZON or check out of the library?

OK. I'll stop now -- it's starting to sound like Morgan Freedman in
S7V7N.

No terriorist attacks in five years since the war on terror started.
That's even way better than Bill Klintoons record. How many times were we
attacked during Bill's administration and he didn't do anything because he
was too busy playing with Monica.

When Bush takes Osama down and squashes him like a bug, I'm sure you and
the democrats will cry again just like you guys cried when US forces took
out Abu Musab al-Zarqawi.

It's hilarious watching President Bush run circles around you lunatic
America haters.

Well, you at least have to give them credit for being on top of all the
chupacabra stories that the mainstream press is either too scared or
too incompetent to cover.

1268. Satellit 800 VS 3400

Newsgroup: rec.radio.shortwave
Date: 2006-09-12 01:15:00 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <7-ednWpMnYiJl5vYnZ2dnUVZ_u2dnZ2d@comcast.com>
Source record: 91443

to answer these questions below....

the later satellits like the 3000,3400,600 and 650 have the most incredible sound but the rest of the radio is not up to the price of admission. the selectivity isn't as good as the price and that is the biggest complaint I have. selectivity is the most important criteria in my book.

the 3400 and 3000 both have similar problems since they are really the same radio. the levers break off a lot and the control knobs on the lower right tend to break off. especially the BFO pitch, even my 3000 have that one mended.

as for the 2400, it would sound great and that is the only thing going for it.

unrevealed source said:

By the way, one of your recent posts said that the Grundig 3400 is not as good a reciever as the Sat800. I have an 800, but have been interested in picking up a 3400 if I can find one at the right price. It sounds like you've compared the two. Any additional comments on the 3400? I do know that they seem to be somewhat fragile and many of them have broken switches.

Ever had a Grundig 2400? I've been interested in those also and would be interested in any comments.

People probably believe Radio-Mart(TM) is a store. Worse yet, a store that actually checks out the gear to insure it is cherry.

I don't know what goes on at "ebay university", but I suspect the instruction is to write the ad with "we" instead of "I" to make it sound like you are some big company. Radio-Mart(TM) isn't the only sleaze-bag that sells as a "we" and buys as a "I". And of course Ebay University says to do the red velvet treatment.

The MW DXing classic. The BEST of the Superadio series. Works perfectly. Super clean. I'd give it's condition a 9+/10. Great sensitivity and very sharp nulls. I doubt you will find one in better condition!

Price is $75.00 shipped in CONUS

> [...] but if Wal-Mart is tracking my
> purchases, then we are all in trouble.

If you think Wal-Mart is *not* tracking your purchases, you are very
naive.

IIRC, it's illegal to use credit card info for that kind of tracking,
which is why all those "savers club" cards are offered by everyone --
to help them track your purchases. The volumes of analysis that goes
on with those records is somewhere between frightening and terrifying,
and using multiple cards (as I found out) won't help at all. They
will carry tracking information between multiple cards as you exchange
them and change them out, especially when stores are pushing a new
product and print a coupon for you to get that product instead of its
competitor that you bought that day.

When you start out on a new "savers club" card and it prints coupons
related to past purchases but not included in your current purchase,
then you start feeling like making a tinfoil hat.

Other than the fact that it looks great. That's why I want one, as a shelf
jewel like some of the others. For actual listening, I use the Sat800 or
the ICF-6800W.

Then there are the half dozen or so Anik birds.

The relatively great distances between larger cities and the terrain over mountains and things first made microwave a very popular alternative to hardwired phone lines and the like. The cost was far less than stretching line and installing poles.

Satellite development was a natural outgrowth of the need to do things in a more cost effective manner. A large land mass with isolated pockets of heavy commerce will do that for you..

They were liberals. They didn't slurp and chomp at the government trough
the way the parasite republicans do.

How pathetic to argue that if someone owns property they are
conservative.

Well, you have to admit that the official story is a pretty sad effort
at a fairy tale. I wonder whether there is a common psychological
profile for the people who swallow that whopper.

My cat likes to listen to the radio with me and he's bound to poke his
nose into the unit if I were to leave the lid off. The results could be
amusing ;-) I suppose that I could just leave the lid sitting there but
he'd find a way to knock it off ;-),

I find that for my purposes,

Sometimes the whip is useful as a local noise antenna. Otherwise I tend
to use an outdoor antenna to null not-so-local pests. The local noise is
intermittent which is why I tend to move that pesky jumper around.

How convenient of you to forget that your country was based upon slavery and even into the second-half of the 20th century your country was quite segregated. The good ol' South seemed to be quite content to use the Bible to back up the use of slaves. You might want to re-examine the New Testament. Slaves who are slaves due to debt is perfectly acceptable within the NT; however, those who kidnapped people to be sold as slaves are condemned.

No, but unfortunately this isn't Reading Comprehension 101, so I can't take the time to teach you the language. For the record, name me one Bush spokeperson that has appeared on Noory's show. I'm genuinely curious about the wackjob perspective on what constitutes a "Bush administration" spokesperson.

I thought you'd never ask! As a matter of fact, the profile is essentially characterized by normal intelligence, the ability to reason, and the will to actually read the opinions of experts on the occurrences of that day. In

many ways, the polar opposite of the sad doofuses who buy into lunatic conspiracy theories about such things as planted explosives. But then you're probably intimately familiar with the latter.

I have only pass on what I heard on the Kim Komando show. I did not hear the entire segment, there may have been more details then what I have indicated above.
Regardless though, by an open mic I mean a microphone that is capable of responding to sound pressure at audio frequencies, connected to an A/D converter, then formatted into a data stream that can be accessed over the internet. Obviously the mic can be anywhere, but the assumption is that may be located within the computer, a standalone mic connected to the sound card, or be located with a web cam system. Exactly how Google will access the sound data I do not know, there may be several methods, but a sneaky spy driver to access the sound card should work for starters.

The "hole" in the antenna is the null or that which will provide the
weakest reception of a station. You want the edge of the electrically
small loop pointed at the station you want to receive. You point the
"hole" or null at a station or noise source you do not want to hear.

1297. Slightly OT -- Why do heterodyne cause an eerie emotional feeling

Newsgroup: rec.radio.shortwave
Date: 2006-09-12 05:23:55 UTC
From: Radium <glucegen1@excite.com>
Message-ID: <1158038634.850510.39470@d34g2000cwd.googlegroups.com>
Source record: 91622

Hi:

I notice when I listen to heterodynes on the AM radio, I get a feeling of both fear and enjoyment. I find the heterodyne to give me a very strange emotional feeling that I can't describe. When I was a kid, I used to play NES [Nintendo Entertainment System] on my TV. The NES required channel 3 to be used. I would use channel 4. On channel 4, the image of the video game was there [albeit hazy and B&W], the music of the game was not there. Instead I heard the strange sounds [resembling heterodynes] and -- to a much smaller extent -- the audio the was on whatever was being shown on channel 4 [e.g. NBC news].

When I was in the second half of my 1st-grade, the schoolbus I was in used to have a CB radio. Whenever someone on the other end said anything on the CB radio, the reception was accompanied by the sounds resembling heterodynes. I would get so scared when I heard them. I don't know why I get so emotional when I hear those sounds.

I am curious as to whether I am the only one who feels this way when listening to heterodynes and similar sounds.

Perhaps there is an unconscious association with heterodynes and emergencies, since most police, firefighters, and other emergency services often communicate with radios which often experience heterodynes. The heterodyne maybe high or low pitched but either way it gives me the same scary yet enjoyable feeling.

Maybe its those binaural beats in the brain resulting from heterodyning within the central nervous system :-)

http://www.answers.com/heterodyne&r=67

Heterodyning in the human brain

"Heterodyning is not confined to electrical signals, but can occur in any medium where signals of different frequencies are mixed, such as sound vibrations in the aircraft engine example given above. The human brain heterodynes stereo signals; by playing two tones with different frequencies (or the same audio with different phases), a beat frequency called a binaural beat is produced inside the brain."

"Some people claim that this phenomenon can be used to alter their brain wave frequencies. As the human ear cannot detect the low frequencies required for this phenomenon, a pair of higher frequency tones must be used. The brain wave frequencies range from 1 to 30 Hz or so, while the ear is sensitive to no signal lower than 20 Hz. (For example, a 102 Hz signal mixed with a 100 Hz signal will produce a beat

frequency of 2 Hz, the difference of the two; but its tone will sound like 101 Hz, the average of the two. One would hear a 101 Hz tone with an amplitude (or volume) which oscillates twice per second. While a 2 Hz non-heterodyne signal could be produced, it would be impossible to hear.) Optical stimulation is usually more successful, as much more of the human brain is devoted to processing visual information, and it can utilize amplitude modulation, rather than beat frequency. Stimulation in this manner can produce changes in consciousness, as different brain wave frequencies are associated with unique states of mind. Epileptics and people otherwise sensitive to flashing lights should use caution with any brain wave stimulation technique."

This line could make your side of a story if you ever wanted to go after
him.

From his description:

" It is functioning perfectly, the calibration is right on the mark and
the set is very sensative, working slightly better than Drake spec's."

Prove it, where is the calibration results, from a certified lab? This
line indicates that he/or someone has verified that the equipment is
working better than it's original spec's, which I am no expert but
I doubt this.

If there was a decent investigation into 9/11, then these conspiracy kooks wouldn't have much to go on. However, you have the Charley McCarthy testimony (not under oath) of Bush/Cheney, Condi Rice (not under oath), blah blah blah and it is easy pickins for the conspiracy kooks.

Shrub reaps what he sows.

In defense of Noory, he has had Peter Lance on discussing 9/11. Peter is no conspiracy kook. Unfortunately, I see Alex Jones is on the menu tonight.

> Telamon
> Ventura, California

Yes, I would think that you would want the variable capacitor close to the loop too. I think what we have here with the loop is just an inductor. So in total we have a parallel resonant circuit. The KA-31 uses a very thin coaxial cable (near 10' long) from the loop to the unit which resides nearer the radio and which contains the adjustment to peak the frequency. I would say the inductance introduced by the coaxial cable is low because of the geometry of the cable so that it is probably insignificant when compared to the inductance of the actual loop. Anyway, the KA-31& DE-31 antennas as I recall don't go down to the 75m or 160m bands. I wonder if the antenna connected to a loop with more turns or a larger loop might in fact go down to those bands.

Damned if I know what is in the unit by the radio. I suspect a variable capacitor and a jfet like a mpf-102. I don't think a varactor diode kind of setuup will tune such a broad range. I will take my unit apart one day soon and report back to group if anyone interested.

regards,
NEO

I once read somewhere the phone companies can turn on land line home phones even if the phones are hung up and they can listen to sounds/voices up to about thirty feet away.(sort of like when we click on music on the internet to listen to) U.S.Military and government can listen in to cell phones,they can also blank out all cell phones in a given area.

I keep my land line phone (cheap $8.47 corded phone I bought at a Wal Mart store) unplugged except when I want to use it because I used to get so many telemarketing phone calls,so I just keep the d..n thing unplugged.I dont have a computer microphone and I dont ever want one either.I can connect a microphone to my webtv set top box and send up to about thirty seconds of sound/voice with emails/but I wont do that either.

Partners in Terror

How the anti-war movement became an open forum for Islamo Fascism

The Stop the War coalition was formed on 21 September 2001 following the 9/11 terrorist attacks. They oppose the war on terror but openly support the Palestinian Intifada. They have organised numerous large scale protest marches across the United Kingdom. The London demonstration just before the war in Iraq on 15 February 2003 attracted around one million people, possibly the largest public demonstration in British history. The coalition comprises of affiliates from mainly far left groups such as the Socialist Workers Party, Communist Party of Britain, Respect and the International Socialist Resistance in addition to trade union representatives. Other affiliates include the Muslim Association of Britain (MAB), Campaign for Nuclear Disarmaments (CND) and the Palestine Solidarity Campaign.
...
The stated aim of the Stop the War coalition is to stop the war on terrorism that America and her allies are engaged in. But their activities have attracted Islamist extremists and become a de facto open forum for Islamo Fascism. It is no secret that groups such as Hizb ut Tahir and the now disbanded al-Mujaharoun were present at the coalition's rallies. Their Radical Islamist propaganda and mindset remain relatively unchallenged by the anti-war movement. Some have even encouraged it.

1323. Beijing's evolving bid to surplant the U.S. in the Middle East

Newsgroup: rec.radio.shortwave
Date: 2006-09-12 16:07:23 UTC
From: Der Fuehrer Mahmoud Ahmadinejad <dr-ahmadinejad@president.ir>
Message-ID: <ee6lvd$1tq$1@emma.aioe.org>
Source record: 91549

China Looks to the Middle East

Beijing's evolving bid to surplant the U.S. in the Middle East

In late July, Qiushi, a state-controlled publication and recognized mouthpiece of the ruling Chinese communist party, released an essay stating that China should strengthen its military to safeguard against "instability and threats to national security." More important for China's neighbors, the essay said, "At present, the political and military environment on China's periphery is quite complex, and unpredictable factors are clearly rising." The Pentagon's most recent Quadrennial Defense Review, a military forecast delivered to Congress, confirmed Beijing's change in thinking, saying, "China's military modernization has taken on an "extra-regional" capability, which will allow Beijing to project military power far beyond its immediate perimeter."
...
With a 2.3 million-man standing army, the world's largest, and a defense budget estimated to be US $90 billion by most Pentagon experts, China is rapidly positioning itself to address not only the unresolved issue of Taiwan, but also energy security issues located far beyond its borders in the Middle East. Today, 58% of China's oil imports come from the Middle East region. By 2015, that figure will stand at 70%.
...
A recent report by the International Energy Agency (IEA) predicts that by 2030, Chinese oil imports will equal imports by the U.S. Unless dramatic changes are made by Beijing in the areas of conservation, energy exploration and hybrid technologies, China's future will rest beneath the sands of the Middle East.

Beijing recently increased its presence in energy-rich Iran, where a joint agreement was announced in July to develop the Khustan province, home to 90 percent of Iran's strategic oil reserves and a border province with Iraq. In early August, Tehran announced a US$2.7 billion oil refinery deal with China 's state-controlled Sinopec that will help the Tehran regime expand its rationed gasoline supply. China has also increased its energy and defense relations with U.S. allies Saudi Arabia, Kuwait and Egypt. ...

Revisionist History. Antiwar myths about Iraq, debunked

Peter Wehner systematically discredits allegations made by Bush critics and antiwar critics.Wehner examines and delegitimizes allegations that United States people were misled when convinced to enter the war in Iraq, the Bush administration pressured intelligence agencies, and Saddam posed a limited threat because weapons of mass destruction were never found.

1334. Receiving Pulse-Code Modulation on AM radio at 3 Mhz?

Newsgroup: rec.radio.shortwave
Date: 2006-09-12 16:34:55 UTC
From: Radium <glucegen1@excite.com>
Message-ID: <1158078895.162736.320120@b28g2000cwb.googlegroups.com>
Source record: 91560
Cross-posted to: sci.electronics.basics,sci.physics.electromag,rec.radio.shortwave,rec.radio.amateur.equipment,uk.radio.amateur

Hi:

Hypothetical situation: a PCM audio signal [24-bit and monoaural] is transmitted through an analog 3 Mhz AM carrier, an AM receiver on the other end [tuned to 3 Mhz] picks up the signal, and the reciever is attached to a device that can recieve, process, and decode the PCM audio back to analog and then send it to a loudspeaker. However -- in this theoretical situation -- the environment is filled with EMI, RFI, and heterodynes that affect all AM stations.

My question: Will the received PCM audio signal remain noticeably "clean" to the listener or will he/she notice the EMI, RFI, and heterodynes affecting the audio?

I ask because I think -- but definitely don't know -- that because the received signal is digital, it is less likely that the EMI, RFI, and heterodynes would cause noticeable auditory disruptions when compared to analog. Do I guess correct?

Thanks,

Radium

Telamon Wrote:
> I'm not familiar with this particular model but I would think that you
> would want the tuner near the antenna.

This diagram explains the issue somewhat:
http://kaitousa.com/KA31.htm

The tuner is a small plastic enclosure including the power switch,
tuning dial, and the battery bay. It has a wire connected directly
that is around 21 inches in length, and the tuner has a jack on the
other side. The jack on the tuner is the same as the jack on the
antenna, and a much longer wire goes between them.

The diagram on Kaito's site indicates that the shorter,
directly-connected wire should make the connection to the radio (or
optionally the short wire with the black and white clips), and the long
wire should go between the tuner and the antenna.

This configuration allows the antenna to be hung wherever it will
perform best, while positioning the tuner close to the radio for
convenient operation.

You guess correct, assuming that FEC is applied to the digital signal
before it is used to modulate the transmitter.

But you wouldn't do it that way anyway. Raw PCM is too bandwidth
inefficient. You'd use MPEG layer 2, or apt-X, or something like that
to reduce the bandwidth without noticeably degrading the audio quality.
You'd probably also multiplex several different channels (programmes)
together onto one RF carrier as well, to make better statistical use of
the RF bandwidth.

Cheers
Mike

Yes - but the chipsets to compress the digitised audio are much cheaper
than the notional value of the bandwidth you would be trashing with
your 24bit PCM.

Cheers
Mike

1356. BBC and the Muslim Brotherhood

Newsgroup: rec.radio.shortwave
Date: 2006-09-12 18:02:49 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12gdthp6dfg5fcf@corp.supernews.com>
Source record: 91581

BBC and the Muslim Brotherhood

"At [Al-Jazeera, employees are] no longer appointed based on qualifications, but [based on] agreed-upon selections, or [are selected by] one of the [Muslim Brotherhood] leaders. Based on what I was told by a friend inside the station, nearly 80% of the station's recent appointees - particularly in the production and the editing [departments] - are Muslim Brotherhood members or are close to movements [affiliated with] the Muslim Brotherhood. Appointments based on considerations of loyalty [to the Muslim Brotherhood] are even made in the management bodies of new professional departments which Al-Jazeera has decided to launch in the near future. The appointees have no professional expertise in the [relevant] fields [but are chosen for their affiliation with the Muslim Brotherhood]."

Which is interesting considering the recent hiring by al Jazeera of a BBC news editor.
http://ussneverdock.blogspot.com/2006/09/uk-bbc-thinks-war-on-terror-is-funny.html

The BBC even boasted they hired the editor in chief of al Jazeera - to train their journalists!
http://news.bbc.co.uk/1/hi/world/middle_east/3403951.stm

Which might help explain why the BBC's John Simpson called the 7/7 Muslim terrorisits "misguided criminals",
http://news.bbc.co.uk/1/hi/uk/4671577.stm
al Qaeda "the resistance"
http://www.telegraph.co.uk/opinion/main.jhtml?xml=/opinion/2006/01/15/do1501.xml&sSheet=/opinion/2006/01/15/ixopinion.html
and Iran a "democracy".
http://news.bbc.co.uk/1/hi/world/middle_east/4800986.stm

The BBC is known for being a left wing, anti-war, communist sympathizer and like those groups has joined forces with Islamists. But just how far down that road is the BBC willing to go? Everyday the BBC seems to inch further down that path.

I'm not saying the BBC have joined forces with the Muslim Brotherhood - yet. Useful idiots more like - for now.

The BBC is a turn-off : It's official

http://ussneverdock.blogspot.com/2005/01/bbc-is-turn-off-its-official.html

BBC and half the story

"Drinking From Home" reports on something that's all too common with the BBC these days.

You might ask why would the BBC do this in a report about Denmark? Because it makes it look like the Islamist have not only won, but that the world supported the Islamist boycott of Denmark.

Just another subtle way the BBC supports terrorism.

Just to add to Mike's comment, FEC works by send the same message several
times- in simple terms, in the hope that one with get through correctly. It
is simple to implement, your recieving system just needs to be able to
identify a correct message and use it, not spot a bad message and initiate
either a request for resend or applly some sort of correction method
(assuming there is error correcting code in the message).

Watch The UNEDITED "Path to 9/11"

Here are 6 video clips from the unedited film the Democrats are trying to suppress. Watch them and you'll see why the Democrats are so scared of this film.

These clips are absolutely devastating!

The film shows just how weak the Democrats are on defense and terrorism. Not good, coming just before the mid term elections.

http://ussneverdock.blogspot.com/2006/09/us-watch-path-to-911.html

The BBC has some clips of the show the Democrats are trying to surpress. Watch the clips and you'll see why.

Note the reference in the clip titled "The mastermind", to al Qaeda operative Yousef as "the Iraqi".

One dyne is equal to exactly 10-5 newtons.
Do you listen to Homodynes?

These comms are in one direction, so you don't resend a packet as there is no way to make such a request. In practice, the codes have both error detection and correction capabilities, so to the degree the coding allows, the signal can be corrected with the bits that were received. Note nobody mentioned a modulation scheme for sending this data.

As a bit of trivia, Reed Solomon encoding was invented without a way to decode it. That's what you get when you let mathematicians run wild. For absolutely nothing of any value other than bragging rights, name the guy who invented the decoding scheme for Reed Solomon. [Hopefully this isn't wikied someplace. I did one class in grad school on error detection and correction, and it was a pain in the ass if you get into the theory. Implementation is quite simple.]

Not a socialist, but a globalist. Of course, Republicans want to bring
US wages down to that of the third world. Their goal is to turn the US
into some third world shit hole, but live in guarded/gated communities.
Unfortunately, shit for brains vote for Republicans.

The historians argue if Bush or Grant is worse. Since I didn't live
under Grant, I say Bush is the worst.

With no FEC, your receiver would be more prone to those errors that you
were worried about in the first place.

Just to amplify on this, anything that you can do to reduce the
bandwidth of the digital signal before it's used to modulate the
transmitter will help. One very big advantage is that you can wind down
the bandwidth of the receiver, thus reducing the level of background
noise in the system.

Why did you choose 3MHz? What's the application?

Cheers
Mike

FEC is generally used in applications where you don't have time to
request a retransmission of an errored packet, and/or where the
transmission path is simplex, and/or where there are multiplex
receivers for a single transmitter.

If you have the luxuries of time and a full-duplex point-to-point
environment, ARQ is better.

Cheers
Mike

> Why did you choose 3MHz?

44,100 X 24 = 1,058,400

1,058,400 bps requires that the frequency of the carrier be at least
2,646,000 Hz. To make it safe, use 3 MHz.

> What's the application?

Well, my application was more to do with reception than transmission.

I'd like to know what I would hear on a 3MHz AM carrier whose receiver
[both the AM and the linear PCM part] is at its maximum bandwidth. The
3 Mhz AM receiver is attached to a linear-PCM receiver [once again,
both receivers have the maximum bandwidth possible for them]. The
linear-PCM receiver is attached to a DAC which converts the linear-PCM
signal to analog. This analog signal [which was PCM] is then sent to a
loudspeaker. Just to make things more interesting, the antennae and
receivers are so sensitive that they can pick signals as low as
.00000001 dB. Most likely, what would I hear?

It makes sense. The encoding software had to be ready to put into a probe
before the launch date. Once it was up it could not be changed.

Decoding software was another matter. Since they had years, maybe even decades
to decode the data, and it did not have to be real time, they could continue
to work on it.

All they had to do is not loose the tapes. :-(

Geoff.

Radium wrote:
> What would these errors sound like?

An error in a PCM system would manifest itself as a difference between what you put in at the analogue input to the transmitter, and what you got out of the analogue output of the receiver.

The magnitude and polarity of the difference would depend entirely on whether the bit error was the MSB (polarity would be wrong), or one of the LSBs (the amplitude would be wrong). It wouldn't "sound" like anything in particular.

Bill Clinton wanted a Nobel Peace Prize. He was willing to sacrifice everyone
to get one. He forced Israel to agree to give up 85% of the West Bank,
all of Gaza, the Golan Heights, and east Jerusalem except for the old
city.

Fortunately for us, Arafat thought if he waited he would get a better deal.

The same with Al-Queda. He was hoping if he left them alone, the Palestinians
would accept his offer.

Geoff.

Hello Norris,

If you are looking for a new radio in your price range, the one to go for is the Sony ICF-7600GR. This features a sideband-selectable sync detector, a very useful feature for listening to voice broadcasts. If you don't mind used, check eBay for a Sony ICF-2010. This radio was discontinued about 3 years ago. Not sure if they average in your price range, but you may get lucky. Also, they are worth spending a little more. Very nice portable with an excellent sync detector.

Finally, if you like Sangean, the ATS-909 is a nice radio. It does not have a sync detector, which, IMHO, is it's major failing. However, it works pretty well with an external antenna. It's display is probably similar to your 505's so you may have that complaint with it. (I think the same might be true of the 2010, though it's been a while since I've used it.)

I have both the 909 and the 2010. The 909 was my first radio. I then upgraded a couple of years later to the 2010. (I have since come down with Radio Obsessive Acquisition Disorder, and gotten a Drake SW8 and a JRC NRD-535D . Both from eBay, which is the only way these are available.)

Not sure about the website you are talking about. Maybe eham.net? They have both reviews and a forum.

Good luck.

Hello Norris,

If you are looking for a new radio in your price range, the one to go for is the Sony ICF-7600GR. This features a sideband-selectable sync detector, a very useful feature for listening to voice broadcasts. If you don't mind used, check eBay for a Sony ICF-2010. This radio was discontinued about 3 years ago. Not sure if they average in your price range, but you may get lucky. Also, they are worth spending a little more. Very nice portable with an excellent sync detector.

Finally, if you like Sangean, the ATS-909 is a nice radio. It does not have a sync detector, which, IMHO, is it's major failing. However, it works pretty well with an external antenna. It's display is probably similar to your 505's so you may have that complaint with it. (I think the same might be true of the 2010, though it's been a while since I've used it.)

I have both the 909 and the 2010. The 909 was my first radio. I then upgraded a couple of years later to the 2010. (I have since come down with Radio Obsessive Acquisition Disorder, and gotten a Drake SW8 and a JRC NRD-535D . Both from eBay, which is the only way these are available.)

Not sure about the website you are talking about. Maybe eham.net? They have both reviews and a forum.

Good luck.

I am selling my NAB (National Assn of Broadcasters) Engineering Handbook (7th edition dated 1985). It is in a heavy hard cover, and the pages are slightly less than 3" thick. Over a thousand pages of text, photos and graphs for AM, FM, and TV stations. Although about 20 years old, it covers current day practices of all analog broadcasters (digital HD is not covered). These come out about every decade.

The current edition (9th) goes for $329.00 at Amazon.com.

You can find it on EBay; started at $55 with a buy-it-now of $100.

What about the heterodyne tones present on analog AM radio? Would they
be audible on a linear-PCM receiver that receives PCM signals on an AM
station?

> results here?

Easy for you to ask. I doubt any store has the device. And the
equipment required to amplify .00000000001 dB to an audible level would
take up the entire room.

So the best I could do -- at least for the moment -- is guess.

I am aware though that just because the PCM-receiver is digital does
not mean its completely immune to heterodynes, EMI, or RFI. If the
heterodyne, EMI or RFI has a waveform that sufficiently resembles a PCM
signal, it may very well be picked up by the PCM-receiver that is

connected to the AM receiver.

Physically, the digital reciever is still an electronic device and
hence it has some reception of EMI, RFI, and heterodynes. Its just not
affected as much as an analog receiver would be.

> Cheers
> Mike

I've seen that "white noise" movie. But thats more like Sci-Fi. Yet it
is one thing that gave me the interest to hear whatever is buried DEEP
in background noise.

His program selection was bad, bad, bad, last weekend. A barrage of old
30's & 40's tunes for a while. He even had Shirley Temple singing "The
Good Ship Lollipop", ROFL, and I'm not making that up either.

I'm a long way from Todd. I can only hear Omega One if there's
propagation. I don't really hear Omega fifteen hours a day, I made
that up, but I can hear it at least five hours a day, and a lot
longer if propagation is good.

You need to hang around until the guy that records secret voices off the back of his scanner shows back up and ask him. But the only radio whining I'm familier with is the whining you hear from people that own Grundigs and Eton's.

I never thought about those "saver club" cards. I don't have a lot of
them -- but I have one to Border's. Good thing I only buy car
magazines with it.!!

So, you're saying that based on your purchases -- that is what
determines what coupons you are issued. I had never thought of that.
What an interesting marketing ploy. Wish there was some way to track
that kind of thing for recruiting for non-profits.!!!

Good thread, and Nice call Telamon! The tuning mechanism by the radio sends a voltage up to the unit by the loop. The unit by the loop has a varactor diode inside. Sombody over in the other group said there is a step up dc-dc converter to get from the 3 or so volts supplied by a pair of AAA batteries to a voltage that the diode can use. I didn't realize that a varactor diode could swing more than a few pf, so thought that they wouldn't be very useful over the complete range the thing is supposed to tune.

regards,
NEO

Holy Cow!

The data sheet for the varactor diode claims less than 30pf to over
400pf with a 7v swing and Q of 200. Nice part - amazing part - how do
they fit all those plates inside there?

In fringe areas, analog cell phones could be well understood despite the
poor signal-to-noise ratio. Digital cell phones in a fringe area just quit
working, or lose sync and you hear bits of other conversations.

Quite right. Any web site that claims:

"Because liberalism is a persistent vegetative state."

deserves your wrath...but wait...is it just possible you completely
misunderstood who's side they are on? It's quite possible, you know.
Illiteracy is a horrible state, but it's easily remedied.

Anyone who has studied the so-called civil war (there wasen't anything civil about it) knows it was really about taxes.There never was any Confederate Ships that ever brought any slaves to America.The last skirmish of the so-called civil war was North of the Artic Circle,sinking British Ships.And who do you think sold them into slavery,in Africa?,,, there wasen't ever any Confederates who went to Africa and bought any slaves.

Slavery was on the way out anyway in America.There were also some black people who owned some white slaves,in America.Slavery still exist in many counties around the World.Instead of watching those anti old South hollywood movies and reading those fiction books,why dont y'all do some Studying? As far as I know,none of my ancestors ever had anything to do with owning any slaves.I suppose if I had been born up North (although a lot of Northerners did own slaves) you wouldn't be picking on the old South.Do a www.devilfinder.com search for, slavery in Ireland

You will see Ireland was much more agains't slavery than England was.
I pick on y'all Canadians because there is all the Reason in the World to do so.

I dont believe in slavery and I never have and I never will.I suppose most people around the World can't believe that though because I was born and raised in the old South.Some of the smartest Military Officers the North had were Southerners who went up North.It was brother against brother in that war.

There were many,many Northerners and Southerners who went AWOL in that war because they mainly they didn't see any sense in it.There are quite a few different names for that war and no one knows which is/was the correct one.The Blue and the Grey eh?,,, as soon as the blue dye (and it didn't take long to wear out either) wore out out those blue clothes,they were grey. A lot of those Rifles that were found on the Battlefields were still loaded several times over without having being fired because those guys on both sides had crapped their pants and they didn't know whether they had reloaded their Rifles or not.When they did it right (reloading) they were suppose to put a metal washer in every load to clean the carbon out of the barrells.

Source record: 91462

OK, after some more work on the dde31, I can offer the following info:

1- with new AAA rechargeables, the batteries are still going strong after 4 hours of use. So, I guess the previous opinion was based on either partially discharged batteries beforehand, or they had a hard time keeping their charge, from overuse.

2 - the reception on shortwave is greatly improved, no doubt, with the de31 and degen 1102, it's just that to obtain that great leap in quality, the plug has to be introduced ONLY HALF WAY into the of the degen 1102 external antenna jack!!! If I do push it completely inside, as it is supposed to be, the degen immediately loses all benefits of the external de31 antenna, even worse than using the whip withdrawn completely(.

3. I don't see any benefits so far, of the small dial on the battery case

4. the wire connecting the antenna to the battery compartment of the de31 is clearly FRAGILE and in the long run, will probably rip. tear, or ruin in the entire de31 due to the weight of batteries it must support, and the hanging style of the antenna from a window.

5, no benefits to am or fm

6. a leap in sensitivity for SSB no doubt is obtained with the de31....

>I had problems with my DE31 until I figured out that the wire between
>the antenna and the radio was backwards. I had the tuner close to the
>loop at first, and it basically eliminated the signal. Maybe most
>people don't make this mistake though.

If there is a decent SNR you are correct.
If the SNR falls below a certain value then
the reverse is true.

> .00000001 dB.

dB is a ratio, not a power.

I'm not sure what you mean by the "probe". The deal with Reed Solomon
is it is a non-binary code, which was a big deal at the time. The
buzzword is Galois mathematics. There wasn't any hardware that could
handle the code when it was invented.

1444. possible fix of rumble synch satellit 700

Newsgroup: rec.radio.shortwave
Date: 2006-09-13 07:03:08 UTC
From: kevin3305a@yahoo.com.hk
Message-ID: <1158130988.822879.182390@i3g2000cwc.googlegroups.com>
Source record: 91470

Here is the article I found form newsgroup that mention about the way to eliminate the rumbling noise of synch detector . I hope someone can study it and give a conclusion on the improvement made be these modification.

quoted form newsgroup rec.radio.shortwave --------

Hi!

Something I've never seen anybody referring to is the striking similarity between a Sony ICF2010 and a Grundig Satellit 700. Inside that is. I personally own samples of both radios and also have the schematics of both radios.

The Satellit 700 is more or less an upgraded ICF2010 (ICF2001D). The synthesizer is using the same chips in a similar configuration (Sony CX7961 and NEC uPC1037 chips two of both). The AM/FM-IF chip is the same (Sanyo LA1205) as is the synchronous demodulator (Sony CX857).

The major differences of a SAT700 compared to ICF2010 are the inclusion

of RDS on FM and the use of switched varactor tuned filters on SW. Otherwise the receivers look almost identical to an engineers eye.

It seems it would have been very unlikely for Grundig to be able to source the Sony chips without a mutual agreement on the design ie. Grundig must have bought the basic design from Sony! In the 60's and 70's the japanese very accused of ripping european and US designs. Later on it seems that the roles did change a bit!

Coming back to changes on the original design Grundig did produce a few bugs. The first one is quite often referred to as rumbling synchronous AM. The main reason for this is that Grundig did mess with the time base of the SAM-PLL. In SAT700 the LP-filter has a 56k resistor and a total of 11nF capasitance. In the ICF2010 the same components are 10k and 11nF. Correcting the Grundig circuit to comply with the Sony original does away with most of the rumble. At it's easiest you just replace the 10nF of "CC817" with a 1nF capasitor.

The second bug is rather serious as well. The varactor tuned SW-frontend filters are switched with PIN-diodes. In the Grundig design the diodes of the filter in use have low forward bias. The diodes of the remaining filters have their cathodes and anodes at the same voltage ie. they have zero bias. For best intermodulation performance one would reverse bias the non-conducting diodes. In my set

I reverse biased the diodes and the improvement in large signal
handling
was remarkable.

What you need to do is to disconnect the resistors CR228,233,238,239,
245 and 246 from +AM+5V rail and connect them somewhere higher. In my
set I used the +30V tuning voltage generator and by a high impedance
voltage divisor produced +10V that I connected the resistors in to.
This resulted in a few volts of reverse bias for the diodes.
(Actually in the easiest implementation you remove the aforementioned
resistors and add new ones on vias on the PCB near the connector of the

cable going to the CPU-board...)

-Vesa-

- How convenient of you to forget that your country
- was based upon slavery

JB - That is True. - - - But What Positive Thing :
Can You Say of Canada for that Time Period in
your early foundation ?

- and even into the second-half of the 20th century
- your country was quite segregated.

JB - That is True. - - - But What Positive Thing :
Can You Say of Canada for that Time Period in
your most recent History ?

- The good ol' South seemed to be quite content
- to use the Bible to back up the use of slaves.

JB - That is True. - - - But What Positive Thing :
Can You Say of Canada and Religion in Canada ?

- You might want to re-examine the New Testament.
- Slaves who are slaves due to debt is perfectly
- acceptable within the NT; however, those who
- kidnapped people to be sold as slaves are condemned.

JB - That is True. - - - But What Positive Thing :
Can You Say of Canada and Canadian Laws ?

-
- JB

When All Is Said An Done . . .
I Am Proud To Say - I Am An American ~ RHF
[JB - Can You Say That You Are Proud To Be A Canadian ?]
- - - JB - Lets Hear {See} Those Seven Little Words :
"I Am Proud To Be A Canadian" ~ JB

I too am proud to be a Canadian. Canada is a fine country.
It is a shame that our governments at various levels are not
representative of the will of the general population, but I
take some small comfort from the hope that Jesus' second
coming will take care of the elitest pressure groups. k35454.

1447. Re: Degen DE31 'portable' Shortwave "Active" Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-09-13 07:52:42 UTC
From: kevin3305a@yahoo.com.hk
Message-ID: <1158133962.177762.271030@p79g2000cwp.googlegroups.com>
Source record: 91473

I have got a DE31 recently and it function properly with reasonable
improvement in shortwave signal.

Those have bad experience with DE31 may just got a fault unit.

The component inside the small box of the loop fail to operate properly
and so give poor performance.

Once you got a operable DE31 , you will think it is really a good
antenna with such price.

Anybody know what the last sentence means?

The second sentence is exactly what most of us figured was the attitude
of the operator all along, so it comes as no surprise. The station's
slogan should really be:

OMEGA ONE RADIO
"WE DON'T GIVE A SHIT"

Yes, the three major issues which people have with the usage of this antenna are:

A) Connecting the wire/amp/loop out of order (so you only get the wire as part of the antenna and not the loop--- quite poor performance).

"> 4. the wire connecting the antenna to the battery compartment of the
> de31 is clearly FRAGILE and in the long run, will probably rip. tear,
> or ruin in the entire de31 due to the weight of batteries it must
> support, and the hanging style of the antenna from a window."

Are you sure that you're attaching things in the right order --- the battery pack should have plenty of wire to be able to place on a table and not be hanging from the antenna.

This is a link to a setup picture from Liypn's ebay ad for the antenna:
http://images.blogcn.com/2006/5/13/5/liypn,2006051394536.jpg

But - in the URL I posted yesterday, they do mention that the tuning knob isn't the most robust (doesn't last too long, in some reports).

B) Not being patient with the tuning. You really have to tune it slowly. First move it until you can hear the area of the dial where it 'clicks' and then move it much, much slower around that area to tune it perfectly.

C) On radios without antenna jacks, not connecting the ground clip to the radio ground. The ground really removes alot of noise which you'd have, if you only connect the antenna clip.

D) Not heard of yet -- but make sure that you don't have a dead battery!

The antenna really does work -- but not nearly as well as the $100+ loops.
By does work, I mean, in comparison to the built in rod antenna -- and an 'in the house' wire antenna. Comparing the in-house wire vs the DE-31, the biggest positive is the reduction of local noise. (The DE31 is shortwave only, they have another SW/MW model.)

Always realize that when you test and compare antennas, sometimes the radio gets 'louder' -- but both the signal and noise get raised at a similar ratio as a result of the antenna...(especially an amplified antenna) and you can have a similar effect by raising the volume.

According to at least some reviews, if you tune this antenna correctly, but have the Sony AN-LP1 on a frequency which is far off from Sony 'course tuning' points, the results are not too far. On frequencies

which are closer to Sony's tuning points, there's no contest.

http://www.radiointel.com/review-degende31.htm

I tested it against my Torus Tuner Loop... it's also much better than
the DE-31 - no contest... it was also much more expensive. Like the
DE-31, the TT also has a full variable capacitor, so it can be tuned
precisely, unlike the Sony.

[I'm most probably going to sell my Torus Tuner soon, just because I
usually use my shortwave while travelling and walking and I can't
travel or walk with the Torus Tuner (I can't walk with the DE31 either
:-)). At home, I end up using web streaming most of the time nowadays.
]

1467. Protecting receivers from RF

Newsgroup: rec.radio.shortwave
Date: 2006-09-13 14:48:17 UTC
From: DesignGuy <dontbother@nowhere.com>
Message-ID: <F--dndwp4LWyh5XYnZ2dnUVZ_tmdnZ2d@insightbb.com>
Source record: 91493

I've just acquired a new HF transceiver, using an antenna in close proximty to my SWL antenna's (all in attic due to neighborhood restrictions). The transceiver can put out 100W max, and all the coax lines are bundled together for the 30' run from attic into my basement listening post.

Aside from unplugging the antenna's from my SWL receivers before using the ham rig, is there any other way to protect the receivers from RF damage to the front-end?

Building a better Degen DE31 'portable' Shortwave "Active"
Loop Antenna - Any Ideas :
http://kaitousa.com/KA31.htm

1 - The very tiny Control Box should have been Twice-the-Size
and Degen should have used Two "AA" Batteries vice 'aaa'.

2 - Add a "Fine-Tuning-Knob.

3 - Adjustable Gain Knob -or- Make the Off / On Power Switch
into an Off / Lo / Hi / Power On and Output Switch.

4 - Add a Switch for either HI-Z -or- LO-Z Output.

So - What Are Your Ideas on What-Is-Wrong-With the
Degen DE31 'portable' Shortwave "Active" Loop Antenna ?

And - What are Your Ideas to Make-It-Better ? ? ?

Easy. "dB" in general usually refers to acoustic power, where the reference
is some ungodly small power level (10^-12W/m^2 IIRC?).

I forget if there's a similar radio context used...

Tim

Card's statement would go a long way towards explaining sheeple. Would you be able to provide a reference for that statement of his? I'm sure it would make interesting reading.

P.S.

Last week, the Wall Street Journal quoted an Indian (in India) tutor that said (-exact- quote) "The American educational system is pathetic".

That may go a long way towards explaining sheeple with "the minds of ten year olds..." that the govt. banks on.

Well, some tried, but no luck in getting a "decent" 9/11 investigation.

The investigation of Pearl Harbor began 11 *days* later. The 9/11 investigation took 3 *years* to get under way and it was like pulling teeth. The Bush administration was THE roadblock, fighting it tooth and nail every step of the way, delaying, refusing funding, arguing who should be on the committee, etc,etc, etc. (Very ironic that Bush was blocking this investigation as he is milking as much political mileage out of 9/11 as he can).

Don't take my word for this---it's all documented in a book titled "Wake-Up Call" by Kristen Breitweiser, a 9/11 widow who had voted for Bush.

The slime and sleaze of the Bush administration she described is not a pretty sight.

P.S.

If it wasn't for her and her group of 3 other 9/11 widows holding the administration's feet to the fire, there is a good chance we would not have even gotten the investigation that we did.

First, you mis-interpreted the question. What was meant was "why were we there in the first place"? Under what pretext now that the Administration has disavowed -both- of their two main reasons they said we should be there.

> - Not Cutting and Running ??

Finally, "cutting and running" is no longer an issue anymore...truly a moot point because...

junior bush has painted us into the perfect corner:

--bad things continue to happen if we stay. The counter on the number of dead American kids will keep ticking higher and higher. The Iraqis had their "free elections", they've had their shot at democracy, blah, blah, blah, and the situation has done nothing but go downhill and continue to worsen. (Gee, big surprise, right? Like we're going to change a thousand years of their tribal fighting).

--bad things will happen if we leave. (civil war, more destabilization of the mid east).

No wrong answers are possible about staying vs. leaving. BOTH sides are right. The USA painted into the -perfect- corner by Georgie. :-(

Source record: 91809

Canadian Neo-Liberal...s Worried About Anti-Communism

http://www.theglobeandmail.com/servlet/story/LAC.20060908.CHINA08/TPStory/Front

Meanwhile,

EU-China Summit: human rights situation in China remains disturbing

Despite the commitment made at last year's Summit [and every year before] to protect and promote human rights, China continues to engage in practices that involve gross human rights violations, says Amnesty International...

...the need to ratify the International Covenant on Civil and Political Rights (ICCPR).

Ratification of the ICCPR: China's arbitrary detention of human rights defenders, the extensive use of the death penalty, of torture and other ill-treatment and the lack of immediate access to legal representation are all infringements of key fundamental rights protected by the ICCPR. Ratification of the Covenant would be an important step in committing the Chinese government to stop those practices. But, despite promises, it has not yet provided any concrete timeframe for ratification.

"We welcome the fact that the EU has made the lifting of its arms embargo contingent on human rights reform", said Dick Oosting, Director of Amnesty International EU Office, "but concerns remain in all areas under scrutiny. The Chinese government has yet to present a coherent plan of reform and steps to improve its human rights practices must be implemented in a clear and consistent manner."

The answer is this:

It would be far more suceptable to interference than the AM equivalent.

The far higher bandwidth gives you a far higher noise bandwidth than the narrower AM equivalent.

So because of the large bandwidth, AM would beat it hands-down.

Sam

I think you need to be a bit clearer in your thinking. I see several people have commented on your use of dB and it seems Mike dealing with the digital side so I'll not pick up on those. I'd like to comment on " the antennae and receivers are so sensitive that they can pick signals as low as........" and your other comment about wide bandwidth.

Firstly, a "sensitive antenna" isn't a good concept, better to think in terms of gain.

However, more importantly, sensitivity isn't just about how "small" a signal your receiver system can "pick up"- you can (in theory) just add more and more gain. The issue is the ratio of the signal to the noise- that is the noise your receiver introduces and that which is "picked up" by the antenna. Winding up the gain doesn't help much with the latter- the noise in the available bandwith is amplified as well. Often a good way to get a better signal to noise ratio is to reduce the bandwidth so, before you get too hung up on having a wide bandwidth, think about what you need to do the job.

I also notice someone mentioned Galois- there was a thread some time back in uk.radio.amateur where I explained the maths behind these. I'd sure a search of Google Groups will turn it up.

There is a virulent form of unpatriotism festering in America today. Like an algae bloom that deprives life of oxygen, it starves democracy of the air of reason. It now thrives on what we call the far Left, but like a dead zone off the coast, it moves with the tides.

I am referring to the seditious dementia of conspiracy theories, the death of faith not in some mere administration or Congress but in America itself.

Haven't you heard? The U.S. government blew up the World Trade Center. Oh, sorry, that's not right. The planes did knock down those buildings, but the White House was in on it. Oh, no, sorry again, that's not what happened. It was the Jews. They razed it without leaving any fingerprints - save for the 4,000 Zionist co-conspirators who were tipped off in advance - in order to frame the peace-loving Muslims of al Qaeda. (Those crafty Hebrews are always coming up with clever ways to make Islamic fanatics look bad, like getting blown up.) Bin Laden's admission that he did it? Well, of course. He's in on it.

Presumably, Bush's demolition experts applied the same expertise to the levees in New Orleans. That's another theory in wide circulation today thanks in no small part to Spike Lee, who gave it a fair airing in an HBO documentary.

The metaphysical, ontological stupidity of all this defies rational rebuttal. It would be like proving I didn't have unicorn for dinner in late December of 1987.

Here's a question: How is a president willing - and able! - to bring down the World Trade Center, murdering nearly 3,000 Americans without inspiring a single whistle-blower or attracting a solitary eyewitness, somehow morally or logistically incapable of planting some exculpatory WMDs in Iraq?

As for Spike & Co., what took Bush so long? Why wait for a hurricane? Oh, how he must have yearned, his men and equipment long in place, to cleanse America of the Big Easy. Oh joyous St. Katrina's Day! And yet, Bush failed to plan for the aftermath in a way that wouldn't defenestrate his poll numbers.

Stupidity isn't the right word for these dark imaginings, because some of these conspiracy theorists are very smart people. Nor is it fair to say they are all left-wingers. Indeed, two prominent 9/11 conspiracy theorists - Morgan Reynolds and Paul Craig Roberts - worked in Republican administrations and have strong conservative credentials. And let us not forget that in the 1990s, sweaty fingers pointed right-to-left. Under Clinton, it was the United Nations - with its satellite office at the Rose Law Firm - that imposed order with its fleet of black helicopters.

"Conspiracy theorist" isn't quite right either. These are priests of the Church of Conspiracy, a heresy of Gnostic heresy which holds that man is the ruler of history, the demiurge of all events that befall us. Powerful and unseen forces lurk in the shadows. The conspiracy theorists know they're out there, even as the enemy's name changes almost daily: Big Oil, capitalists, Republicans, or perhaps those eternal pullers of mankind's puppet strings, the Jews.

The masons of dementia build upon a bedrock of one absolute truth: Bad things happen, and someone must be responsible. Upon this bedrock they pile convenient and selective facts like bricks. Contradictory facts are clever lies. When Popular Mechanics debunked 9/11 hokum, the immediate response from conspiratorialists was "cover-up!" and "CIA front!" because in this perverted faith, denying the ultimate truth must be proof of a lie.

This rough beast slouches toward sedition because it assumes not that our leaders are knaves or even mere criminals, but that they are murderous Supermen with no loyalty to nation, decency or law. Our Constitution is a fraud, a charade for the rubes some of us naively call citizens. If you disagree, you're either fool or "in on it." In his 1964 essay, "The Paranoid Style in American Politics," Richard Hofstadter demonstrated that this fever of the mind is as old as America itself and its outbreaks flare up across the ideological landscape. What is so sad and frightening is that this diseased thinking is reaching epidemic proportions. More than a third of Americans believe the U.S. government was likely to have been involved in 9/11.

In the past, when these outbreaks occurred on the political right, liberal hand-wringers fretted about incipient fascism and rising McCarthyism. Today, the best we get from them is a bemused and sterile chuckle.

The feedback system on e-Bay is more of an 'I'll scratch your back if you scratch mine' system. Feedback is often exchanged by users and sellers as a perfunctory conclusion to the transaction. Because feedback is rarely revokable, many do not wish to leave negative feedback.

I know, it doesn't make a lot of sense to most of us. But considering that poor service and less than satisfactory transactions are widely accepted in commerce coast to coast these days, don't expect the e-Bay feedback system to reflect an accurate portrait of buyer satisfaction.

Note also that Martyn's listings clearly appeal to less knowledgable users. Maghakian is actually quite right: Radio-Mart's listings are often inaccurate, if not deceptive. Buyers who move on these transactions who don't know the difference will not be dissatisfied, and while those who do have other motives for their purchases. Negative feedback will not be posted for these transactions.

But if you read the feedback comments for Radio-Mart, you'll see a pattern in the complaints. As well as a pattern in Martyn's responses that tell you more about what doing business with him is like than the raw percentage ratings.

And actually, among sellers on e-Bay, a 97.5% feedback rating is quite low. It's quite low for brick and mortar merchants, too.

If Bob Grove had a satisfaction rating that low, he'd have been out of business years ago.

Fear of retaliatory feedback has kept some users from posting negative feedback. Martyn has been known to threaten negative feedback when a transaction goes south, something that's expressly forbidden by e-Bay, and can get most users ejected summarily.

However, as is common today, complaints are not as frequent as offending situations. Nor are the complaints particularly well made.

Unfortunately, there is a different set of rules for large volume sellers like Martyn than those for lesser sellers, or casual buyers, and complaints are treated differently.

What it would take is more than one user forwarding a documented case
of a threat of negative feedback to get e-Bay to look into complaints
against this guy.

1502. What 9/11 documents did Sandy Berger destroy?

Newsgroup: rec.radio.shortwave
Date: 2006-09-13 17:34:23 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12ggg8gcglkvt2b@corp.supernews.com>
Source record: 91828

What 9/11 documents did Sandy Berger destroy? Is a question that still needs to be answered.
We have a clue to that answer in the Clinton's reaction to "The Path to 9/11".

http://ussneverdock.blogspot.com/2006/09/us-what-911-documents-did-berger.html

...the hissy fit Bill Clinton and his former colleagues threw calling for ABC to pull this TV movie is also deeply repellent.

It's not just that Bill Clinton is married to the leading Democractic candidate for the presidency (who might have a lot to say about television broadcast regulation), or that Harry Reid, who called on ABC to pull the movie, could be Senate majority leader in a few months. No, it is the sheer chutzpah of Clinton's National Security Adviser Samuel R. ("Sandy") Berger, complaining that ABC is tinkering with the historical record.

Here is how The Washington Post reported Berger's criminal conviction in April 2005, for, let us say, less-than-pristine concerns about preserving the historical record:

"Samuel R. 'Sandy' Berger, a former White House national security adviser, plans to plead guilty to a misdemeanor, and will acknowledge intentionally removing and destroying copies of a classified document about the Clinton administration's record on terrorism. ... The deal's terms make clear that Berger spoke falsely last summer in public claims that in 2003 he twice inadvertently walked off with copies of a classified document during visits to the National Archives, then later lost them. ...

"Rather than misplacing or unintentionally throwing away three of the five copies he took from the archives, as the former national security adviser earlier maintained, he shredded them with a pair of scissors late one evening at the downtown offices of his international consulting business.

"... Berger's archives visit occurred as he was reviewing materials as a designated representative of the Clinton administration to the national commission investigating the Sept. 11, 2001, terrorist attacks. The question of what Clinton knew and did about the emerging al-Qaida threat before leaving office in January 2001 was acutely sensitive, as suggested by Berger's determination to spend hours poring over the Clarke report before his testimony."

Over the years, historians and dramatists will produce many, many versions of "The Path to 9/11." If Bill Clinton wishes in the future to complain about historical inaccuracies, I suggest he first answer one question:

What handwritten notes, and by whom, were on the three copies of classified documents (out of five) that Sandy Berger chose to steal and cut up with scissors in 2003, smack in the middle of the 9/11 commission's investigation?

When we know the answer to that question, Bill, then and only then will you be entitled to complain about historical inaccuracies in the record.

This article or one very similar was posted on rec.shortwave recently.
To be honest I would not even bother tryng to fix that old Grundig
radio. Just buy a 2010 if used radios with a functioning synch
detector is your interest. Or move forward to new and advanced
technology with an Eton E1.

kevin3305a@yahoo.com.hk wrote:

...
Debunking 9/11 Myths: Why Conspiracy Theories Can't Stand Up To The Facts" expands to book-length a collection of articles Popular Mechanics published in March 2005. The book contains new appendices and updated analyses.

"Debunking" begins with an insightful and blunt foreword by Sen. John McCain, who observes, "Conspiracy mongering is no small phenomenon. . . . These theories come in nearly infinite variety, but all reach essentially the same conclusion: that the U.S. government, or some shadowy group that controls it, organized the attacks as part of a master plan for global domination. But the truth is more mundane. The philosopher Hannah Arendt described the banality of Nazi evil; the 9/11 hijackers were also ordinary, uninteresting men with twisted beliefs."

Counterterrorism expert Richard Clarke's blurb for the book describes it as "reliable and rational" and that the government "isn't competent enough to pull off such conspiracies and too leaky to keep them secret."
...

...the underlying reasons why hacks seem incapable these days of reporting accurately...

The horrors of war

Yesterday, I had an amiable chat with Patrick Barkham of The Guardian, the results of which may appear in the Monday edition.

Amongst the things discussed was the underlying reasons why hacks seem incapable these days of reporting accurately on issues like the war in south Lebanon, a subject to which I have given a great deal of thought.

At the root of the most egregious failures, I believe, are three fundamental flaws - all to do with the basic mindset of the journalists involved. The first, it seems to me, stems from the way history has been taught in schools for some decades, where the focus on past wars is presented in terms of the horrors and suffering, with very little factual information as to why and how they were fought.

To a very great extent, therefore, children finish their education imbued with the idea that "war is bad" - violence is bad, without in any way understanding the historical contexts in which wars have been fought, or realising that, bad though it most certainly is, there are worse things than war.

Secondly, within modern journalism, there is a current vogue to couch "stories" in terms of "human interest", which means that nothing is news until a human face can be found on which to base any account. A simple, factual account of events is not longer acceptable - there must always be a human dimension.

While this was always the case, to an extent, the balance has now tilted so far that "human interest" now dominates the news, so much so that factual

content has virtually disappeared.

Thirdly, now coming through the system, we have a generation of journalists who have never seen military service and have thus no experience, from the sharp end, of warfare, nor of military affairs from the inside. This tends to be combined with an anti-militaristic viewpoint, carried over from their education, which means that your average hack is usually ignorant about the conduct of warfare.

This is the sort of person that can just about - with a little schooling - tell the difference between an armoured personnel carrier and a tank (although they often have trouble distinguishing either for an MICV) and such is their level of ignorance that they are rarely able interpret what they see, or provide intelligent comment.

And, being unable to understand what is going on, they prefer to stick with what they know - burbling about the "horrors of war". And, in the current operations in southern Lebanon, where it is in Hezbolla's interests to emphasise precisely that point, they find in the western media, people who are admirably conditioned to serve them.

By some cruel irony, in today's Daily Hezbolagraph, we have a superb example of the genre, with Tim Butcher filing a stunningly ill-informed piece about operations on the Lebanese border.

I just received my new DE1105:

- small and light

- basic functionality is easy to operate

- advanced functionality (copying station pages, setting alarms etc.)
is not intuitive, you need to spend half an hour with the manual

- good backlight for display and keys so you can operate it in the dark

- the DE31 antenna I got with the eBay offer helps a lot, but
interestingly more so when the DE31's amplifier is turned off

- selectivity almost as good as its big brother Sangean ATS909

I also bought a GP-4L radio for USD 20 which is even smaller and
lighter:

http://www.countycomm.com/gp4light.htm

- analog tuning with digital frequency display is handy to quickly
search a band

- worse selectivity than the DE1105, strong stations must be not be
close or you hear nothing

You need to do a lot of studying on how to use the dB. Without a
reference, it is meaningless. The classic use in audio was 1 mW into
600 Ohms = 0 dBm, and yes, there are a number of RF uses for the dB.
Either in reference to one of several different reference levels, or as
an absolute ratio, such as the input to output level of an amplifier.

_____
Hail Eris!
Demon Prince of Absurdity
COOSN-029-06-71069
Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are only for adults who has an underage id somehow or another if they are a cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much. Why don;t you go to pervertedjustice,com and see what they do. They are awash in their self-proclaimed glory after they lied to membners of the public.
They are awash in their self-proclaimed glory after they posed as an underage person and agreed to do all sorts of sex acts wioth adult males, and they are adults posing as teenager themselves. They make themsleves into liars by falsely impersonating underage persons and by not fuilfilling the words they tell the victims online in their chats. Why don't you read it where they tell these victims of their deceit about how they have been with grown men and such? Why don't you read it where they say, "That would be cool." after someone makes an advance towards an adult who is posing as a teenager? And, where they agree to meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots of these false impersonation games are not sticking. They feel as if

they can lie and then order the victims to get counseling in the gayblade, governmental, pro-choice tax leech counseling centers. They are doing nothing more than usury and fraud in many cases." -- Wentzky almost comes out of the closet as a pedo/ephebophile in MID: <H%%Eg.28916$Uq1.22411@bignews6.bellsouth.net>

Yup. The Theremin does go well with Sci-Fi movies.

If the frequency difference is exactly that of notes [white keys] C and
D and both these frequencies are played exactly together, they sound
like the high-pitched sine-wave tones played on the Emergency
Broadcasting System.

Hey All,

Bene hearing these sequences of beeps on 4770kHz this evening. They are the same number of beeps, repeated after a short interval.

http://www.cvni.net/radio/nsnl/nsnl089/nsnl89ms.html speaks about a 'Chinese naval marker' active on this frequency. Could this be it? If so, a mighty catch with my Sony AN-1 and passive loop on which I can hear it both...

Because of phishing, trojans, and other very smart crooks trying to get into my account, and also because of Paypal complaints that are legion, there is no way I would link up my main bank account with Paypal. When I sell something on ebay, I request payment by a money order, when I buy something on ebay I pay by money order. If the seller wants Paypal only, I move on to the next listing. I have noticed that more and more sellers are glad to accept money orders, especially individuals who are selling their own stuff. I have had no problems with Paypal but there are just too many really clever scammers working the internet. I maintain a tiny account in a different bank to handle fees: if I do get hit by a crook, or by Paypal, the loot would only be about $5.00. In addition, in Canada, interbank money transfers are safe and inexpensive.

Is what you are hearing on 4770 sending something like this: V 5J4I 5J4I 5J4I de YI4K YI4K" as indicated on the website above?

From here it merely sounds like an idling SITOR or some other such thing.

>> It would be far more suceptable to interference than the AM equivalent.
>
> Including heterodynes?

Theoretically, with optimal decoding, you require around 3dB C:N to decode an AM digital signal.

3dB C:N as opposed to the 20dB C:N that you need to get a good AM signal sounds to be a winner.

But AM would be about 30khz bandwidth, and this PCM signal would be 3mhz.

That means that the bandwidth gives you at least 20dB less sensitivity, so comparing the signal bandwidth-wise, you only require 0dB C:N across the same bandwidth to get the AM signal.

So you have a 3dB advantage for conventional AM over PCM.

Next, let us look at the nature of AM and heterodynes.

By the nature of audio AM, you will find that a single heterodyne can degrade the C:N to as low as 10dB before it becomes perceptible.

So therefore in the same bandwidth with PCM, you then have -10dB C:N, which is not enough to decode the PCM.

Therefore, PCM is inferior to AM, and you would not only be wasting precious bandwidth, and face considerable issues with other transmissions and the physical design of the antenna, transmitters and receivers, you would also find that it is nowhere near as effective.

Maybe studying something like GSM compression or MP3 compression formats, FEC and COFDM or similar may be your answer.

COFDM with a good FEC system is one of the most robust methods to transfer digital data in the presence of heterodynes there is. With the correct encoding and decoding techniques, you can have easily -80dB C:N because of a heterodyne some 80dB stronger than your signal, and the data would be still decoded correctly. Theoretically you could have hetrodynes thousands of dB stronger than the carrier, but unfortunately the reciever technologies are nowhere near that advanced yet, but even with cheap decoders, you could aim for around 80dB as a realistic goal under ideal situations (which is what you appear to advocate).

AM radio and its content has long been an appropriate subject for this NG, although that fact may be lost on those whose attention spans are somewhat challenged. . BTW, didn't "Bwaaahaaahaaaaaa" go out with the Wooly Mammoth?

Bravo. It's hard to decide who is more reprehensible--the people who come
up with these absurd conspiracy theories in the first place or the people
who help publicize them to fill up air time. The people who just believe
the theories are excused on stupidity grounds.

I was only joking, the Canadian is useful on this mission.

The astronauts wanted to keep the toilet clean, so they figured
having a Canada Arm on the inside of the shuttle would be a good way
to do it.

there is nobody that has never broken the law SC but in justice were
involved he would have nothing to worry but in truth Politics is in
the mix and he MIGHT have reason worry (truth has little to do with
politics afterall)

So - What Are Your Ideas on What-Is-Wrong-With the
Degen DE31 'portable' Shortwave "Active" Loop Antenna ?

And - What are Your Ideas to Make-It-Better ? ? ?

iane ~ RHF

.....

you might take a look on the loop group on yahoo. long discussion on the DE31 been going on for about 2 weeks. i tried it out last winter. along side my sony and my torustuner sw loop. came in last. i like the sony on the road. easy to take with you and set up. i have also hung it in the car. works a treat, if you keep the window up. gets you a few odd looks. for me the TT is tops. wish i had bought a second one. easy to use, and just the right size on my desk. as always, YMMV.

Father Michael.

Source record: 91758

For one, I'd like to be able to use the antenna passively (ie without
the amplifier).
(I usually use my Torus Tuner Loop that way.)

In another group, someone mentioned that the variable capacitor doesn't
last long... That should be improved...(important for durability).

Is anyone actually listening to the comments here?

I also think that by the time we're done here, it may get as expensive
as the 'good' loops are... What do you expect from this antenna,
considering the price?

I live in an apartment building. Around the 4th floor. My shack is in one room and the nearest Cold Water Pipe is in the bathroom.

It would take about 20 feet of wire to go around the wall to reach the little Cold Water pipe in the bathroom under the sink.

I am not sure which gauge of wire to buy, or must it be 100% copper?

As for clamps: What would be a good type to use? The largest thing to clamp would be a PL259 coax connector.

What about soldering each clamps to the wire?

I have a few radios & things and maybe even an antenna that I want to bring to a common ground.

Is their some kind of copper pipe that I could have in a horizontal position behind the radios on my desk area, everything then clamp down to the horizontal copper pipe, then to the 20 feet wire, then to the Cold Water Pipe?

Is their a meter that I could also have in this line, to watch any grounding fluctuation? I think that would be fun to watch!

73, SR!

> My point was that some otherwise ambiguous dB scales (at least one) have a
> defined absolute basis.

Like Michael stated dB is a logarithmic reference-less ratio value.

You can use dB for things like amplifiers that have a gain or
attenuators that have a loss for example. The gain of an amplifier can
be expressed in dB because the reference value is the input value of
the amplifier, which will allow you to calculate the output value but
if you are speaking of a value of power or voltage by itself then you
need an absolute scale with a reference quantity.

Absolute scales would be dBV, dBuV, and dBm. In those terms the
reference is 1 volt, 1 micro-volt (0.000001 volt), and 1 milliwatt
(.001 watt).

The reason you need a reference value is noise prevents you from
measuring 0 Volts and 0 watts accurately so you need to use a small
reference value in its place and so everyone agreed to use these
values.

Definitions are:
dBV = 20 * log (volts / 1)
dBuV = 20 * log (volts / 0.000001)
dBm = 10 * log (power / .001)

So for example:
30 dBm = 1.0 watt
0 dBm = 0.001 watt (the reference value)
-30 dBm = 0.000001 watt

Most of the time in radio dBm, dBuV, and watts are used.

OKAY, I TAKE EVERYTHING BACK, THAT I SAID BAD ABOUT THE DEGEN 31 !!!

The blame of the wrong wiring, was on the stupid diagram, wrongly showing the connections, on the EBAY site and other sites!

In fact, I had the wire the wrong way, with the battery pack handing just under the square form antenna, and the long wire leading to the radio.

As soon as I reversed the direction, with long wiring dropping from the square shaped antenna, the battery pack sat side by side with my degen 1102, so I won't be susceptible to the fragile wire connection, as it won't be hanging.

Finally, there is no need to have the connector half inserted into the ext. antenna jack, because I fully inserted it, the reception was poor, but all that was needed, was to move the TUNING ADJUST on the de31 aaa box, and the signal became ideal, strong, clear and quite a bit better than using only the whip antenna!

Mystery solved....blame the poor diagram, showing on ebay, misleading customers about proper assembly. !

Also, it was never explained that the extra part with 2 clips, is intended for those people wishing to replace the square shaped antenna, with a simple long wire form, which is almost the same as the long wired originally shipped with the degen 1102 radio, so I don't see the point of that part, as it's useless.

The batteries, as stated last also, seem to be hanging in there, fine, after several hours too.

>Are you sure that you're attaching things in the right order --- the
>battery pack should have plenty of wire to be able to place on a table

Be careful what you ground or you may get a very costly surprise. Solder would be unnecessary, but the "bus" grounding arrangement should be alright. Multistrand insulated bell wire would be OK - if something blasts the line with current make sure the line can handle it without getting hot, melting or burning something . I'm not sure a meter would show anything actually - others here with much more technical knowledge than I would have to answer that. V.

> ? What is the detuning limit with synch stably lock of your satellit
> 700?

I'm no radio designer but as I understand it the sync circuit basically
controls a local oscillator with a PLL circuit that has a long
integration time so as long as you are tuned near enough for the
received signal to be in the bandpass range of the filter in use the
PLL circuit will lock to it.

The lock range will vary but most analog models should accommodate plus
or minus 2 KHz without a problem. A DSP radio with sync in software is
a different story and there the range is likely much smaller.

I can not tell you specifically what the Satellite 700 can do since I
do not own one.

< Snip >

Some radio stations are off frequency. Use a mode that injects a fixed
receiver local oscillator frequency like CW mode to zero beat the
receiver to the target signal then switch back to sync AM.

You could use an RF relay to protect the receiver. The relay should be
energized by keying the mike. The relay should ground the radio input
when the mike is keyed. Most transceivers have a relay control output
for this function.

Bushevik did say that there wasn't any connection between Saddam and
A-Q. Where is the connection to 911? Where is the connection to WMDs?
Recent intelligence reports that have come to light recently state that
Saddam Hussein considered A-Q to be a potential threat.

Tell me again what truthful and legitimate reason led Bushevik to invade
and destroy another country?

Don't waste your breath, Brian. Seems like most everyone in here is so
filled with hate for anything or anyone different from their diametrically
opposed narrow views that all they can do is spew that hate through their
fingertips, not realizing that they are all, for all practical purposes,
exactly the same. Polarized attitudes are always counterproductive for
humanity as a whole. Unfortunately, that is the climate that has been
brought about and supported since 11 September 2001.

A ground may or may not make any difference. It depends on the antenna
you are using. Being 40 foot off the ground the water pipe will behave
like a wire instead of ground so connecting to it is of little
consequence.

Their is a plastic pipe for the drain. But I do not see any plastic on the cold water pipe. However, I live in an apartment and out side of my bathroom, I do not know if their is any other plastic pipe connected to that cold water pipe!

I do have a (heat) radiator which is like a pipe.

It's almost as someone wants massive hatreds developing. Look at all the extremely tight elections in Mexico, the US and the last Canadian election. Things couldn't be getting more polarized if they were planned that way.

The name calling is unprecedented and the insults from certain quarters are getting obscene. It will most likely increase before the next elections. Respecting someone else's differences in philosophy used to be common. Now, they become 'tards and inhabitants of some childishly mangled name country.

We all agree politicians LIE. Why let their minions drive us apart in hatred? The divide and conquer tactic has a very good track record. Don't fall prey to it.

You turn on the radio, you then hear a conversation in a broadcast format. Spend 5-15 minutes figuring out what is it that their talking about. Then realizing that it is nothing more then a very long long endless commercial trying to sell you something.

You find them on medium and even short-wave.

Who in hell invented this concept??????????????

Sometimes I find it embarrassing that pro radio person like me can fall for that!

I rather listen to the robot on the WX stations all night.

Given you are discussing use of the dB, I think the above leaves a bit out.
You can't use 0W as your reference because, given the definition of the dB,
you'd need to divide by 0 which, as I'm sure you know, isn't acceptable.

Pure - No the Two-Clips are to connect :

* The White-Clip to the Radio's Screw Antenna Terminal
or Whip Antenna

* The Black-Clip to the Radio's Screw Ground Terminal
or the Chassis Ground.

The Loop Antenna Element is used at all times.

hope this helps - iane ~ RHF

>> been charged with possessing or distributing pedophilia, k00k.
>
> God you are a total waste of bandwidth.
<top-poasting fix0red>

Surely not as big a waste of bandwidth as Wabbit? He libels with wild
abandon, outs personal contact info in x-poasts, and attempts to use AUK
against his flamewar opponents. He only succeeded with Mark because Mark
provided him with very boring opposition, not because we(tinw) "let"
him.

4. What's this newsgroup NOT for?

This group exists for recreational Kookology, not for Very Personal
Vendetta. It is not to be used for general harassment of someone, or for
net abuse such as spamming and flooding and cancelbombing in an attempt
to gain vengeance on someone or get the denizens of AUK to shut up.
Either way, it won't work, it's very messy, "Bob" will give you triple
your money back, and you don't get a life.

Also, we [tinw] are not in the business of harassing the vulnerable or
the insane. Occasionally an apparent net.kook proves to be genuinely
ill. In such cases the person is disqualified from winning awards and
other posters are asked to avoid exacerbating his or her problems.
Similarly, trolling or kook-hunting in support groups is strongly
discouraged.

And surely not as big a waste of bandwidth as some top-poasting fuckwit?
Flaming me when I'm making an intelligent reply, however offensively
off-topic as it may seem to the Supreme Usenet Emperor Steve Stone, is
perhaps a less-than-bright manoeuvre on your part.

Hint: It is not my problem if you don't know how to operate your
newsreader's killfile. Or how to get a real newsreader.

Nothing, it's just indistinguishable from a 0db signal.

In other words it's about half the amplitide of a 3db signal...

It's a logarythmic scale.

Bye.

I like antenna just fine as it is. But I would like it to maybe tune to 550kHz. So maybe have another plug in loop that is larger or maybe has more turns. Yes, Yes, that's it! Loops that plug in sorta like bandswitching coils in the old days.

More thoughts on the placement of the variable capacitor

- A parallel resonant circuit has fairly large currents sloshing back in forth between the caps and the inductor. Of course in a loop antenna arrangement where we are dealing with microvolts the currents aren't so large, but, any resistance in the path (such as a long thin cable) between the inductor loop and the variable capacitor will reduce the circuit's Q. So an arrangement using a potentiometer by the user and a varactor diode by the loop end is perfect.

Regards,
Yzordderrex

I was wondering how can one transmit CW on a 6 meters, 2 meters and 440 MHz HT radio?

What kind of CW key is used? Straight or paddle?

Where is it connected on the HT radio?

How do you control things like tone, speed, weight?

HT V/UHF radio seem to not have a CW mode.

Is their a HT model out there for CW?

73, SR!

-If you had read the book, you would know that they supported Kerry with
great reluctance; they stated that it wasn't so much they were for Kerry
but against Bush's sleaze and slime and three years of his

foot-dragging. As a matter of fact, had you actually read the book (I know, what an unusual thought), you would have found that they actually "damned Kerry with faint praise".

-Say what you will about the Jersey girls, but if it wasn't for them, you may have -never- seen a 9/11 investigation. (Tell us again why it took more than THREE YEARS for Bush to grudgingly have the investigation--and then only at because of the prodding and public spotlight brought on by the Jersey girls).

P.S.
Tell us again why it took Bush THREE foot-dragging YEARS to investigate 9/11 and only 11 days for FDR to investigate Pearl Harbor????

That's our ARRL. Once again they have positioned themselves to lead
the amateur radio hobby as it charges forward toward new technology.
Someone might want to clue the ARRL in that Ebay has been operating as
an auction business for about a decade, they went public about 5 years
ago after they dominated the market, and that Ebay most likely does not
even realize the AARL is even holding the auction.

> Is their a HT model out there for CW?

I don't know of any current HTs that will transmit CW. The Kenwood TH-F6 will *receive* CW but won't transmit it. (I believe Yaesu makes a similar radio)

Theory would suggest you could send CW with any HT by using the push-to-talk button as a Morse key. Or, by connecting a code key to the external microphone jack, to the PTT terminals. However, in my experience this works VERY poorly if at all. [0] I don't think the frequency-setting PLL circuit stabilizes fast enough to allow you to do this. You might be able to do it at VERY slow code speeds, 5wpm or less.

One good option is to use *tone-modulated* CW. Use one of the touch-tone buttons on the radio as a code key. Unlike shortwave CW, the RF carrier would be on all the time, but you'd be keying an audio tone (actually, two audio tones) on and off. *Any* HT with a tone pad could transmit this way, and *any* normal HT could receive this kind of CW.

--
Doug Smith W9WI
Pleasant View (Nashville), TN EM66
http://www.w9wi.com

[0] (I managed to complete a CW contact this way on 2 meters once. I later contacted the same station on 6 meters, where I had a real radio. Asked him what my signal was like on 2 meters. He said "if a guy wants the contact badly enough, he can copy it...")

It must be the beginning of DX weather again. Laying in bed the past several nights I have heard clear station I.D.'s for the CBC broadcast from Winnipeg, Manitoba on 990 kHz and for WFLA from Tampa, Florida on 540 kHz, 1012 and 992 miles respectively from my location in WNY. I knew 540 was likely Florida because I tuned in during the forecast when the weatherman was predicting temperatures in the upper (humid) 80's. Actually, I found reception of Winnipeg more surprising because I had never heard even a whisper of it before on any radio. Makes me wonder if they changed their antenna pattern. As I have often written before, kudos to Sangean for producing such a fun little radio.

I give them a listen here, on WCPT from time to time. Mostly for the same reason: a good laugh. Actually, I'm a fan of Al Franken.

This past Monday, with all the noise about "Path to 9/11" on the air, I was particularly interested to hear the morning host, whose name I neither caught, not was interested in, say:

"I think this whole thing is silly. I know I'm not going to change my mind based on a MOVIE. I know YOU aren't, either."

And yet, listen to the noise about how unfair, prejudicial, political and just plain mean "Path to 9/11" is. And we must take action against ABC's O/O licensees for airing it.

I think 'brazen' is too mild a word.

Now, Michael Moore's "Bowling for Columbine" was presented as a documentary, though Moore, in an ambush interview on the streets of Hollywood last year, admitted that it was an opinion piece, scripted and cast with actors. And his "Fahrenheit 9/11", he also admitted in the same ambush interview, was, too, an opinion piece. In his words, "like a letter to the editor. It was not a documentary."

And yet, both of these films were widely distributed, at little or no cost, and shown in the schools--colleges and high schools, with the message that these were important films that MUST be seen. Air America hosts made a big deal about "Fahrenheit 9/11," and continue to do so. As they made a big deal about another 'message' film: Al Gore's "An Inconvenient Truth."

Interesting that these films, and the ones that are inevitable to follow, are MUST viewing, 'to get the truth out." And yet "Path to 9/11:" well, "I know I"m not going to change my mind based on a MOVIE," but let's threaten licenses over those who present it.

Hmmmmmm....

And they wonder why they didn't catch on.

540 kHz is WFLA in Orlando; WFLA Tampa is 970 kHz. Temperatures in the
upper 80's was a cool day!

Happy DX,

Greg

No, without a reference, its use is meaningless. He was trying to
use dB for an absolute signal level, not a ratio.

It's more than a little presumptuous for the ARRL to claim their
auction will be competitive with Ebay auctions in any measurable way.
But maybe the statement is tongue-in-cheek. Indeed because this is an
ARRL fund raiser they will be peddling donated items and it does not
appear that individual members will be selling directly. Given the
quality of equipment one sees for sale at most radio club sales, I
doubt that the ARRL will do much policing or vetting of merchandise.
My guess is ARRL will severely limit participation by requiring buyers
to be ARRL members.

1700. Communist Anti-War Protesters Find Bush 'Guilty' of War Crimes

Newsgroup: rec.radio.shortwave
Date: 2006-09-14 16:26:40 UTC
From: SeeingEyeDogg <ear@shot.org>
Message-ID: <12gj0lhspn51bae@corp.supernews.com>
Source record: 91876

...
C. Clark Kissinger is a writer for the Revolutionary Communist Party's (RCP) newspaper, Revolution, who convened the Bush Crimes Commission. He tried to convince reporters and protesters Wednesday that there was no predetermined bias among the jurists hearing the testimony.
...
But some who support the findings are worried that commission organizers have ulterior motives.

"It is my belief, and [that of] many others ... that both these [organizations] are front groups of the RCP [Revolutionary Communist Party] and in fact were initiated by the RCP leadership," peace activist Jerry Olek said, referring to the commission and to one of its sponsoring groups, World Can't Wait.

Olek told Cybercast News Service that he is a "firm believer in the fact that this president is guilty of those things that the commission uncovered." But he expressed concern that Kissinger and Larry Everest, another writer for Revolution involved in the commission, are "key leaders of the RCP."

"My concern," Olek concluded, "is that the RCP is using, manipulating the legitimate peace movement concerns for their own strategic objectives - overthrowing democratic government and establishing socialism, communism."

Before that, (in Seattle), 6035 kHz at 3:00 is usable if you use your
smallest knothole. (Much adjacent interference).

15280 and 15360 (from Asia) have faded away.

In the morning, 9740 and 6195 are only coming in strong from
about 14:00-16:00. That might get better when the greyline
tips a bit from being due north-south due to the equinox.

And, from a dimly remembered article in QEX many years back, a lot of
shortwave broadcast transmitters have a lot of phase noise. (Speculation:
probably those high effiency transistorized class D ones). Put a
noisy carrier into the servo loop, and the output of the phase detector
will need just the right filters to not carry that through to the VCO.

Geesh. Talk about lies. The cuts, nearly a year ago, had to do with the ending of the production of a TV series by the Univision network.

This has nothing to do with short-wave, and has nothing to do with radio, either.

(Why don't you post about all the jobs that were lost when Seinfeld ended? Or Cheers? Or M*A*S*H?... it's the movie and entertainment biz, not radio, that you are looking at.)

The 9/11 photograph you didn't see

In his Sept. 10 column, Frank Rich of the New York Times describes a "taboo 9/11 photo," one so "shocking" that photographer Thomas Hoepker didn't publish it for four years.

Pt. 1 http://www.slate.com/id/2149508/
Pt. 2 http://www.slate.com/id/2149578/

So, Air America leaks word of its bankruptcy to liberal blog Think Progress
in an attempt to avoid complete humiliation by all those evil right-wingers
who were spreading such vicious rumors about its financial chaos.

May I just say: Bwahahahahahaha.

First question: Will the New York Times fiiiiinally get around to covering
this story? Hmmm?

So what is acoustic dB?
http://home.new.rr.com/trumpetb/audio/dBexamp.html
SPL, I should say.

There it lies, x dB on the left scale.

There are other on-line auctions and classifieds. Often those in a
specialty don't want to deal with the general public. [Doh, I found
this at a flea market, can't test it, but you can buy it.] Astromart is
a good example. I've done kilobuck deals on the honor system there.

This auction is a fundraiser for ARRL. My guess is that equipment will
be donated by members and possibly from a manufacturer or two. Maybe
the ARRL has a closet of old equipment that could be auctioned too. I
would be very surprised if they opened the auction up to the general
(non-ARRL) public.

That is a SPL chart with the dB levels referenced to 0 dB SPL =
0.0002 ï¿½bar.

Today I discovered that one of those little RF Systems mini-windom antennas makes an awesome noise antenna for the ANC-4. It works better in this role than any of the random wires I was using.

No, but PayPal has always maintained that the "service" they provide is merely transferring money around, so if you have your bank charge-back something that went through PayPal they *will* dispute the chargeback, and since they can demonstrate that they transferred the money from you to a seller, it's highly unlikely the bank will side with you. As far as the bank is concerned, you sent Paypal some money and they then sent it on to someone else -- unless you can dispute *that*, you're out of luck. The bank doesn't care what "someone else" might have done with the money subsequently.

That being said, PayPal does have their own fraud protection system these days. IMO, dealing with PayPal isn't as safe as buying directly with a credit card, but it's *much* safer than sending a check, money order, etc.

SWLog, a radio control, logging and database program has recently
been updated to include support for the R-5000. This program
is the most extensive SWL multi-function program available. Features
include local and remote receiver control; integrated database
support for HFCC,ILGRadio, EiBi, PTSW and seven other formats;
propagation prediction; audio capture; chat; extensive logging
capability; report generation and QSL generation in ten languages.

Bob Sillett, the developer of SWLog, has been working on this program
for years and keeps adding new features. The best part is the price:
FREE.

Download at http://www.shortwavelog.com/

User support at http://groups.yahoo.com/group/swlog/

Hams might consider Ham Radio Deluxe (HRD). It is a very extensive,
FREE software package. SWLog and HRD can run simultaneously and share
information via a DDE interface.

HRD available from http://hrd.ham-radio.ch/

The Democrats anti-America anti-morality message which played on Air America isn't sellable except to the liberal k00k lunatics of the democrat party. Democrats are anti-work, anti-business. They tax anything that is successful. Even though democrats jerk themselves off hard while enjoying the contents of Air American, they're not going to pay to support it, Democrats are the ones whining for handouts from the government. More welfare and foodstamps, project housing and welfare. No. Those losers aren't going to pay. They feed off big government.

I'm surprised the Dems haven't demanded the Government pay to keep the liberal lunacy of Air America going like they do that liberal democrat socialist communist dung-heap National Public Radio International.

I used to use an HT to communicate through RS-10, just keying the FM
transmitter, and receiving the downlink on my HF rig. Not quality CW but
it worked.

If SR has an all mode HF receiver, he can tap the IF in the HT, set the IF
frequency on the HF rig and receive decode CW and SSB from the HT that
way.

Interesting threads

What about setting up two checking accounts (main and secondary) - the secondary is not linked to anything (overdraft, credit card, savings, etc)

Then keep a small amount in the secondary account ($5 or zero)

Now when some one sends you funds - tell Paypal to send it to the secondary account - when received quickly transfer to your main account.

When you buy thru Palpal -- quickly deposit the required amount in the secondary fund

In both case -- keep track of things until the transaction is complete

Whatta ya think ??

CL -- been doing that for some time now

Anyone know where I can get one? It has a special-sized socket that I am having trouble matching, so I imagine Sony builds an adapter especially designed for the radio. Amazon doesn't have it, so I'm not sure where to look...

Any help is appreciated.

Problem is that if PayPal tries to take funds out of the account that aren't there, YOU get charge with NSF, including whatever outrageous fee your bank charges for NSF checks, and in some states (Idaho comes to mind) you can actually be charged with a felony.

Media ownership study ordered destroyed
FCC draft suggested fewer owners would hurt local TV coverage

Updated: 1:08 p.m. CT Sept 14, 2006

WASHINGTON - The Federal Communications Commission ordered its staff to destroy all copies of a draft study that suggested greater concentration of media ownership would hurt local TV news coverage, a former lawyer at the agency says.

The report, written in 2004, came to light during the Senate confirmation hearing for FCC Chairman Kevin Martin.

Sen. Barbara Boxer, D-Calif. received a copy of the report "indirectly from someone within the FCC who believed the information should be made public," according to Boxer spokeswoman Natalie Ravitz.

Do you have a three wire plug or two wires? If you have a three wire
plug the third wire is ground. I don't think using a cold water pipe is

an appropriate ground path for electrical devices.

Source record: 91943

http://www.universal-radio.com/catalog/portable/2023.html
$19.95
"The optional AC adapter for the Sony ICF-SW7600GR was the Sony
AC-E60HG. However, Sony discontinued this AC adapter. The newer
replacement Sony AC adapter, called the AC E60A emits interference
(RFI) making it unsuitable for use with world band radios. Sony does
not currently offer a satisfactory AC adapter for the Sony
ICF-SW7600GR.

"Universal has found a source for a suitable power supply. The MW
41-680 provides the correct the voltage and current. We have added a
voltage regulator to it and applied the appropriate plug. It works very
well the the ICF-SW7600GR. This adapter is not made by Sony. "

Two years ago, the court rejected Bush's claim that he had authority
to seize and detain terrorism suspects and indefinitely deny them
access to courts or lawyers. In this follow-up case, the justices
focused solely on the issue of trials for some of the men.

The vote was split 5-3, with moderate Justice Anthony M. Kennedy
joining the court's liberal members in most of the ruling against the
Bush administration. Chief Justice John Roberts, named to the lead the
court last September by Bush, was sidelined in the case because as an
appeals court judge he had backed the government over Hamdan.

Thursday's ruling overturned that decision.

Your racist scum attitude is showing again, Bozo. Why don't you go bomb
the hell out another country with brown skinned people? You are good at it.

You should get medical help. Your cancerous brain tumor is growing.

It's called "sarcasm". Keep trying, you'll get it, eventually.

You see, Cheney's daughter, the lesbian, would not be "invited" into the military because of her "orientation". This poses a problem for the Right Wing who wishes to deny the existence of gays and lesbian (at least politically)...so, the issue of gay freedoms is spawned by the very folks who deny them. Those folks are "bigoted" Conservative Republicans. A conundrum, sort of.

There, the "SARCASTIC" voice of liberalism now speaks out"

SWlog is great! in addition, Fineware used to sell a nice program for the R-5000 and a free program RLDB that controls the R-5000 but they are no longer around. There is an old Kentrol program that can still be found. There are several other current programs that work with the R-5000.

> you can actually be charged with a felony.
>Golly Brenda Ann'
That could happen on your main account if you aren't careful (joint checking
accounts get really messy with two folks writing checks.)

The secondary account is strictly for Paypal - nothing else.
I said open up a ligit secondary account
I said when you use Paypal to purchase
First transfer the money to your secondary account
Both the money and the account are legit and there waiting for paypal
Of course you must give Paypal your legit account humber for the secondary

account

In other words - I don't want any one (not even my wife - we have separate accounts - keeps things in order) to have access to my Main account.

CL -- works so far. Crossing typing fingers.

Go to your neighborhood Radio Shack.

Be sure you know the voltage and amperes you need. Once the AC adaptor
is selected, the salesperson can choose from a large number of plug
sizes to fit your socket, and give you the appropos plug. (Take your
radio, so they can try the plug in the actual socket.)

I dont steal movies.But I have never read before that there is a law agains't taking my little bitty digital recorder to movie theaters.That isn't stealing movies because there is no video on there.

Hey,where can I buy me one of those little digital cameras that automatically takes about 12,000 snap shots every 24 hours,the kind that is worn around the neck? I heard Kim Komando mention something about those new fangled cameras a few years ago on her radio talk show.
Note: I did not say I would sneak a camera into a movie theater with me.

You need more than that -- you need one which is regulated and
filtered. When I bought a RS regulated and filtered adapter a few
years ago, there still was buzz on MW (even though there wasn't on
shortwave).

Again, Universal has a compatible adaptor.

LMAO. The Publicity Girls and their Kerry flaks did not have the
credibility to hold anyone's feet to the fire. Only those such as yourself
who look under every rock to have their paranoid suspicions confirmed by
like-minded simpletons paid any attention to them. As I said earlier, take
this over to MoveOn or the Democratic Underground where the continuous echo
chamber will make you feel better about yourself. And what three years
are you talking about anyway?

listen.

1801. DX Audio Clips on the DXPodcast - from Grayland WA

Newsgroup: rec.radio.shortwave
Date: 2006-09-15 04:31:38 UTC
From: Guy Atkins <dxnospam@guyatkins.com>
Message-ID: <9eednQxQ5406sZfYnZ2dnUVZ_r6dnZ2d@comcast.com>
Source record: 92124

Colin Newell of www.dxer.ca has kindly featured a few of my best trans-Pacific medium wave and tropical bands DX catches on his latest DXpodcast.

If you'd like to listen to some special catches from Grayland and other coastal WA DXpedition spots, check out:

http://www.dxer.ca/images/stories/podcasts/dx_podcast_sept14_06.mp3

DX audio in this podcast includes:

HLAZ Korea 1566 kHz
A3Z Tonga 1017 kHz
Channel Africa 4945 kHz via longpath
Radio Free Bougainville 3880 kHz
Wantok Radio Light 7120 kHz
RPDT2 Buol Toli Toli (Indonesia) 3654.1 kHz

BTW, Colin pronounces my name as "Gee", but I think he must be referring to my French stunt double... my heritage is as Brit as Monty Python <g>
Anyway, enjoy the DX!

Or, as suggested, it could be the Macon area station, which programs a
Mexican-targeted format.

Only thing I can find in Spanish on 1670 is KHPY in Moreno Valley, CA.
Nothing at all in Mexico on that frequency. Pattern's not much good for
you, it's main nighttime lobe is to the SE, but I suppose it's possible you
could get it off the back lobe. They run 10KW days and 9KW nights.

http://www.radio-locator.com/cgi-bin/finder?call=KHPY&sr=Y&s=C&x=11&y=3

I phoned that Bell South who lives out in the woods near Natchez (four hundred acres,not her property,but the people who own the property let her live there) about five hours ago.She said she had to stop and let her 1976 Dodge camper cool off (the radiator has a lot of crud in it) in about half a dozen towns between Jackson and Natchez.

When I phoned her she was outside running some radiator flush through the radiator.I told her the only way she will ever get that radiator right is to take it off and take it to a radiator shop.She said in one of those towns she stopped in she took the radiator thermostat out but it still ran too hot.

The other woman who lives next door to me went to Minneapolis a few days ago.(court date) She is suppose to be back in Jackson this afternoon.She better get her booty back over there because my van is parked in the driveway over there and she parked her car too close behind my van and I need to go to the food store this afternoon.

Last I listened, the station was English, with a strange variety format with
a lot of brokered crap.

I doubt Gail Van Voorhees, the PD, is doing Spanish programming. There might
be some Spanish brokered stuff, though.

David (the other one) suggested the Macon station, which is likely. After
that, there is a Dominican, and a couple of Latin Americans
